1. INTRODUCTION

The quality of technical education should be improved in such a manner that engineering graduates are able to compete globally in terms of their knowledge and skills and serve for the society and nation. And for this purpose Learning Outcome-based Curriculum Framework (LOCF) is developed.

Incorporation of Learning Outcome-based Curriculum Framework (LOCF) in the Graduate program like B. Tech. makes it student-centric, interactive and outcome-oriented to achieve well-defined aims, objectives and goals. The learning outcomes are attained by students through development of skills acquired during the program of study by providing them practical exposure. Program learning outcomes will include subject-specific skills and generic skills, including transferable global skills and competencies. It would also focus on knowledge and skills that prepare students for further study, employment and society development. LOCF help ensure comparability of learning levels and academic standards across colleges/universities.

At present, the goal of technical education may be achieved using the following measures:

- i. Curriculum reform based on learning outcome-based curriculum framework (LOCF).
- ii. Improving learning environment and academic resources.
- iii. Elevating the quality of teaching and research.
- iv. Involving students in discussions, problem-solving and out of box thinking about various ideas and their applicability, which may lead to empowerment and enhancement of the social welfare.
- v. Motivating the learners to understand various concepts of their educational program keeping in view the regional context.
- vi. Enabling learners to create research atmosphere in their colleges/ institutes/ universities.
- vii. Teach courses based on Choice Based Credit System (CBCS).

2. LEARNING OUTCOME-BASED APPROACH TO CURRICULUM PLANNING

The Bachelor of Technology (B. Tech.) degree is awarded to the students on the basis of knowledge, understanding, skills, values and academic achievements. Hence, the learning outcomes of this program are aimed at facilitating the learners to acquire these attributes, keeping in view of their preferences and aspirations for knowledge.

The course for B. Tech. is designed according to outcome based approach in the light of graduate attributes, description of qualifications, courses and program learning outcomes. It may lead to all round development and delivery of complete curriculum planning. Hence, it provides specific guidelines to the learners to acquire sufficient knowledge during this program.

The program has been planned in such manner that there is scope of flexibility and innovation in

- i. Modifications of prescribed syllabi.

B.Tech. (CS)

- ii. Teaching-learning methodology.
- iii. Assessment technique of students and knowledge levels.
- iv. Learning outcomes of courses.
- v. Addition of new elective courses subject to availability of experts in colleges/institutes/universities across the country.

2.1. Nature and Extent of Undergraduate Program

As a part of effort to enhance employability of engineering graduates the outcomes based curriculum are very essential in present day perspective. Therefore, higher education degrees must formulate Graduate Attributes (GAs), qualification descriptors, learning outcomes and course learning outcomes which will help in curriculum planning and development in the form of design and delivery of courses. The overall formulation of the degree program must equip learner to have competencies to provide deliverables to the industry.

2.2. Aims of undergraduate program (B. Tech.)

The overall aims of B. Tech. program are to:

- ii. Create deep interest in Practical learning. Develop broad and balanced knowledge and understanding of definitions, concepts and principles.
- iii. Familiarize the students with suitable tools related to designing, modeling etc.
- iv. Enhance the ability of learners to apply the knowledge and skills acquired by them during the program to solve specific problems of their courses.
- v. Provide learners sufficient knowledge and skills enabling them to undertake higher studies in technical field.
- vi. Encourage the students to develop a range of generic skills helpful in employment, internships and social activities.

2.3. Motive behind curriculum planning and development

The committee considered and discussed the following factors for LOCF for the graduates:

- 1) Framing of syllabi
- 2) Learners attributes
- 3) Qualification descriptors
- 4) Program learning outcomes
- 5) Course learning outcomes
- 6) Necessity of having elective courses
- 7) Academic standards

3. PROGRAM EDUCATIONAL OBJECTIVES (PEOs):

The program educational objectives are set in line with Institutional and Departmental mission statements. The program educational objectives of Bachelor of Technology is to produce engineers who later take the responsibility of engineering professionals and researchers with following qualities:

B.Tech. (CS)

- PEO1.** Apply basic knowledge of mathematics, principles of physics and chemistry, and interdisciplinary engineering for the design and development.
- PEO2.** Demonstrate the application of exploration practices and engineering principles through development of innovative tools that is beneficial in production.
- PEO3.** Exhibit skills of design and construct machineries based on requirement and need of Technology operations.
- PEO4.** Exhibit strong, independent learning, analytical and problem solving skills with special emphasis on design, communication, and ability to work in teams.
- PEO5.** To have successful career as engineering professional or researcher through lifelong learning in the field of Bachelor of Technology.

4. GRADUATION ATTRIBUTES (GAs)

The graduate attributes in B. Tech. are the summation of the expected course learning outcomes mentioned in the end of each course. Some of them are stated below.

- GA1: Discipline-specific Knowledge:** Capability of demonstrating comprehensive knowledge of B. Tech. program and understanding of core branch so that it forms a foundation for a graduate program of study.
- GA2: Critical Thinking & Analytical Reasoning:** Ability to employ critical thinking in understanding the concepts relevant to the various branches of engineering. Ability to analyze the results and apply them in various problems appearing in different streams.
- GA3: Problem Solving:** Capability to solve problems by using research-based knowledge and research methods including innovative thinking, design of experiments, analysis and interpretation of data, and synthesis of the information to provide valid conclusions.
- GA4: Research-related skills:** To develop a sense of inquiry and capability for asking relevant and intelligent questions, problem identification, synthesizing and articulating; ability to recognize and establish cause-and-effect relationships, define problems, formulate hypotheses, test hypotheses, analyze, interpret and draw conclusions from data, establish hypotheses, predict cause-and-effect relationships; ability to plan, execute and report the results of an experiment or investigation.
- GA5: Usage of Modern Tools (Information/ digital literacy):** To create, select, and apply appropriate techniques, resources, and modern science and IT tools including prediction and modeling to complex science activities with an understanding of the limitations.
- GA6: Social Responsibilities:** Ability to work with contextual knowledge to assess societal, health, safety, legal and cultural issues and the consequent responsibilities relevant to the professional engineering practice.
- GA7: Self-directed learning with environment:** Ability to work independently and do in depth study of various problems and requirements of society with natural available resources which leads to sustainable development.

B.Tech. (CS)

- GA8. Moral and ethical awareness / reasoning:** Ability to identify unethical behavior such as falsification or misrepresentation of data and adopting objective, unbiased and truthful actions in all aspects of their program.
- GA9. Leadership Readiness / Qualities:** Capability for mapping out the tasks in a team or an organization, self-motivating and inspiring team members to engage with the team objectives / vision; and using management skills to follow the mapped path to the destination in a smooth and efficient way.
- GA10: Communication skills:**
- Ability to communicate various concepts of technical education effectively using practical approach and their geometrical visualizations.
 - Ability to use courses as a precise language of communication in other branches of human knowledge.
 - Ability to resolve unsolved problems and requirements of industries and societies.
 - Ability to show the importance of their technical knowledge as precursor to various scientific developments since the beginning of the civilization.
- GA11: Project Management and Finance:** Ability to demonstrate knowledge and understanding of the engineering and management principles and apply these to one's own work, as a member and leader in a team, to manage projects and in multidisciplinary environments
- GA12: Lifelong learning:** Ability to think, acquire knowledge and skills through logical reasoning and to inculcate the habit of self-learning.

5. QUALIFICATION DESCRIPTORS (QDs)

The qualification descriptor suggests the generic outcomes and attributes to be obtained while obtaining the degree of B. Tech. The qualification descriptors indicate the academic standards on the basis of following factors:

1. Level of knowledge
2. Understanding
3. Skills
4. Competencies and attitudes
5. Values.

These parameters are expected to be attained and demonstrated by the learners after becoming graduates in this program. The learning experiences and assessment procedures should be so designed that every graduate may achieve the program learning outcomes with equal opportunity irrespective of the class, gender, community and regions. Each graduate in engineering should be able to:

- I. Demonstrate fundamental systematic knowledge and its applications. It should also enhance the subject specific knowledge and help in creating jobs in various sectors.
- II. Demonstrate educational skills in areas of their program.

B.Tech. (CS)

- III. Apply knowledge, understanding and skills to identify the difficult/unsolved problems in courses of their program and to collect the required information in possible range of sources and try to analyze and evaluate these problems using appropriate methodologies.
- IV. Apply one's disciplinary knowledge and skills in newer domains and uncharted areas.
- V. Identify challenging problems and obtain well-defined solutions.
- VI. Exhibit subject-specific transferable knowledge relevant to job trends and employment opportunities.

6. PROGRAM OUTCOMES (POs)

Students graduating with the B.Tech. degree should be able to acquire with following POs

- PO1. Engineering knowledge:** Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialization to the solution of complex engineering problems.
- PO2. Problem analysis:** Identify, formulate, review research literature, and analyze complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences.
- PO3. Design/development of solutions:** Design solutions for complex engineering problems and design system components or processes that meet the specified needs with appropriate consideration for the public health and safety, and the cultural, societal, and environmental considerations.
- PO4. Conduct investigations of complex problems:** Use research-based knowledge and research methods including design of experiments, analysis and interpretation of data, and synthesis of the information to provide valid conclusions.
- PO5. Modern tool usage:** Create, select, and apply appropriate techniques, resources, and modern engineering and IT tools including prediction and modeling to complex engineering activities with an understanding of the limitations.
- PO6. The engineer and society:** Apply reasoning informed by the contextual knowledge to assess societal, health, safety, legal and cultural issues and the consequent responsibilities relevant to the professional engineering practice.
- PO7. Environment and sustainability:** Understand the impact of the professional engineering solutions in societal and environmental contexts, and demonstrate the knowledge of, and need for sustainable development.
- PO8. Ethics:** Apply ethical principles and commit to professional ethics and responsibilities and norms of the engineering practice.
- PO9. Individual and team work:** Function effectively as an individual, and as a member or leader in diverse teams, and in multidisciplinary settings.
- PO10. Communication:** Communicate effectively on complex engineering activities with the engineering community and with society at large, such as, being able to comprehend and write effective reports and design documentation, make

B.Tech. (CS)

effective presentations, and give and receive clear instructions.

PO11. Project management and finance: Demonstrate knowledge and understanding of the engineering and management principles and apply these to one's own work, as a member and leader in a team, to manage projects and in multidisciplinary environments.

PO12. Lifelong learning: Recognize the need for, and have the preparation and ability to engage in independent and life-long learning in the broadest context of technological change.

Mapping of Graduate Attributes (GAs) and Program Outcomes (POs):

PO12												■

7. PROGRAM SPECIFIC OUTCOMES (PSOs):

PSO1: Professionally empowering the student as technical manpower in industry or an entrepreneur for production analytics and innovation.

PSO2: Able to excel in various technological challenges and contribute for self-reliant society.

8. TYPES OF COURSES

1. Courses in a program may be of four kinds: Core, Elective, Ability Enhancement and Skill Enhancement.

a) Core Course:-

There may be a Core Course in every semester. This is the course which is to be compulsorily studied by a student as a requirement to complete the program in a said discipline of study.

- Engineering Mathematics-I

B.Tech. (CS)

- Engineering Physics
- Engineering Physics Lab
- Engineering Mathematics-II
- Engineering Chemistry
- Engineering Chemistry Lab
- Discrete Mathematic Structure
- Digital Electronics
- Data Structures and Algorithms
- Object Oriented Programming
- Internet & Web Technology
- Software Engineering
- Data Structures and Algorithms Lab
- Object Oriented Programming Lab
- Software Engineering Lab
- Digital Electronics Lab
- Internet & Web Technology Lab
- Probability & Queuing Theory
- Microprocessor & Microcontroller
- Database Management System
- Theory of Computation
- Data Communication and Computer Networks
- Microprocessor & Microcontroller Lab
- Database Management System Lab
- Network Programming Lab
- Linux Shell Programming Lab
- Java Lab
- Information Theory & Coding
- Compiler Design
- Operating System
- Computer Graphics & Multimedia
- Analysis of Algorithms
- Computer Graphics & Multimedia Lab
- Compiler Design Lab
- Analysis of Algorithms Lab
- Python Lab
- Industrial Training
- Digital Image Processing
- Machine Learning
- Information Security System
- Computer Architecture and Organization
- Artificial Intelligence
- Cloud Computing
- Digital Image Processing Lab

- Advance Java Lab
- Machine Learning Lab
- Mobile Application Development Lab
- Mobile Computing
- Cloud Security
- Cyber Security Lab
- Industrial Training
- Seminar
- Software Testing and Validation Lab
- Project

b) Elective Course:-

Elective course is a course which can be chosen from a pool of papers. It may be

- 1) Supportive to the discipline of study
- 2) Providing an expanded scope
- 3) Enabling an exposure to some other discipline/domain
- 4) Nurturing student's proficiency/skill.

An Elective Course may be 'Discipline Centric/Specific' & Generic Elective

Discipline Centric/Specific Elective (DSE): Elective courses offered under the main discipline/subject of study are referred to as Discipline Centric/Specific.

- Wireless Communication
- Human-Computer Interaction
- Bioinformatics
- Distributed System
- Software Defined Network
- Ecommerce & ERP
- Internet of Things
- Block Chain Technology
- Natural Language Processing
- Internet of Things Lab
- Block Chain Technology Lab
- Natural Language Processing Lab
- Big Data Analytics
- R Programming
- Deep Learning
- Big Data Analytics Lab
- R Programming Lab
- Deep Learning Lab

Generic/Open Elective (GE): An elective course chosen from an unrelated discipline/subject is called Generic/Open Elective. These electives will be focusing on those courses which add generic proficiency of students.

- Principle of Electronic Communication

- Micro and Smart System Technology
- Optimization Techniques
- Soft Computing
- Robotics and control
- Simulation Modeling and Analysis

c) Ability Enhancement Compulsory Courses (AECC):-

AECC courses are based upon the content that leads to knowledge enhancement, for example: English Communication, Environment Science/ Studies, etc.

- Communication Skills
- Human Values
- ANANDAM
- Advanced English
- Human Values Activities
- Managerial Economics and Financial Accounting
- Technical Communication
- Professional Skills
- Leadership & Management Skills

d) Skill Enhancement Courses (SEC):-

SEC Courses provide value based and/or skill based knowledge and may content both Theory and Lab/Training/Field Work. The main purpose of these courses is to provide students life- skills in hands- on mode so as to increase their employability.

- Programming for Problem Solving
- Basic Electrical Engineering/Basic Civil Engineering
- Language Lab
- Computer Programming Lab
- Basic Electrical Engineering Lab/ Basic Civil Engineering Lab
- Computer Aided Engineering Graphics
- Basic Mechanical Engineering
- Basic Electrical Engineering /Basic Civil Engineering
- Manufacturing Practices Workshop
- Basic Electrical Engineering Lab /Basic Civil Engineering Lab
- Computer Aided Machine Drawing

2. List of Course

Computation of Workload:

Lecture (L)	:	1 Credit = 1 Theory period of one hour duration
Tutorial (T)	:	1 Credit = 1 Tutorial period of one hour duration
Practical (P)	:	1 Credit = 1 Practical period of two hour duration

B.Tech. (CS)

9. PROGRAM STRUCTURE B. TECH. (B.Tech. CSE)

Semester - I

Note:

- A student is required to obtain min. 40% marks in individual paper to pass.
- The total credit of B.Tech. (CSE) Programme is 199. However, the minimum credit required for award of degree shall be 193.
- The credit relaxation will be applicable only on the elective course from different semester (i.e. the student can opt out only elective subject).
- Out of the total credits, 20% of the credits may be earned by the student through MOOCs (SWAYAM, NPTEL, Coursera etc.). However, the choice of online courses to be approved in advance by Dean/ HoD and Coordinator SWAYAM keeping in view the latest guidelines of the UGC/ respective regulatory body guidelines.

BTBSC101: Engineering Mathematics-I

Course Objectives:

- To familiarize the prospective engineers with techniques in calculus, multivariate analysis and differential equations.
- To equip the students with standard concepts and tools at an intermediate to advanced level
- To understand Vector Calculus with three important theorems.

Course Content:

Unit I: Differential Calculus:

Partial derivatives, directional derivatives, total derivative, Jacobians and properties. Leibnitz's Rule of differentiation under integral sign. Maxima And Minima , saddle points; Method of Lagrange multipliers,

Unit II: Integral Calculus:

Improper integrals (Beta and Gamma functions), Applications of definite integrals to evaluate surface areas and volumes of revolutions. Double integrals (Cartesian), change of order of integration Change of variables (Cartesian to), areas and volumes by double integration, Triple integrals (Cartesian), Simple applications

Unit III: Differential Equations:

First Order and First degree ordinary differential equations: Linear and Bernoulli's equations, Exact equations, Linear Differential Equations of Higher order with constant coefficients.

Unit IV: Differential equations with variable Coefficients:

Second order linear differential equations with variable coefficients, method of variation of parameters, Cauchy- Euler equation; Power series solutions including Legendre differential equation and Bessel differential equations.

Unit V: Vector Calculus:

Scalar line integrals, vector line integrals, scalar surface integrals, surface integrals, Theorems of Green, Gauss and Stokes.

B.Tech. (CS)

Course Outcomes:

At the end of the course, the student will be able to:

CO1:	Apply the Concepts of the differential calculus.
CO2:	Understand the calculation and Applications of Multi variable integrals.
CO3:	Understand and apply the concept of differential equations with constant coefficients.
CO4:	Understand and apply the concept of differential equations with variable coefficients and power series.
CO5:	Understand and apply the concept of vector calculus.

Course Delivery methods

CD1	Lecture by use of boards/LCD projectors/OHP projectors
CD2	Tutorials/Assignments
CD3	Seminars / Presentations
CD4	Project Discussions
CD5	Self- learning advice using internets

BTBSC102: Engineering Physics

Course Objective:

- To understand the concepts of interference, Diffraction and Polarization.
- To know about wave particle duality.
- To know applications of Optical fibre.
- To know applications of Lasers in Science, engineering and medicine.
- To know classification of Solid.

Course Contents:

Unit I: Wave Optics

Newton's Rings, Michelson's Interferometer, Fraunhofer Diffraction from a Single Slit. Diffraction grating: Construction, theory and spectrum, Resolving power and Rayleigh criterion for limit of resolution, Resolving power of diffraction grating, X-Ray diffraction and Bragg's Law.

Unit II: Quantum Mechanics

Introduction to quantum Mechanics, Wave-particle duality, Matter waves, Wave function and basic postulates, Time dependent and time independent Schrodinger's Wave Equation, Physical interpretation of wave function and its properties, Applications of the Schrodinger's Equation: Particle in one dimensional and three dimensional boxes.

Unit III: Coherence and Optical Fibers

Spatial and temporal coherence: Coherence length; Coherence time and 'Q' factor for light, Visibility as a measure of Coherence and spectral purity, Optical fiber as optical wave guide, Numerical aperture; Maximum angle of acceptance and applications of optical fiber.

Unit IV: Laser

Einstein's Theory of laser action; Einstein's coefficients; Properties of Laser beam, Amplification of light by population inversion, Components of laser, Construction and working of He-Ne and semiconductor lasers, Applications of Lasers in Science, engineering and medicine.

Unit V: Material Science & Semiconductor Physics

Bonding in solids: covalent and metallic bonding, Energy bands in solids: Classification of solids as Insulators, Semiconductors and Conductors, Intrinsic and extrinsic semiconductors, Fermi dirac distribution function and Fermi energy, Conductivity in semiconductors, Hall Effect: Theory, Hall Coefficient and applications.

7. Online course: "Optoelectronic Materials and Devices" by Monica Katiyar and Deepak Gupta on NPTEL

B.Tech. (CS)

Course Outcomes:

At the end of the course, the student will be able to:

CO1:	Enhance the basic skills required to understand, develop, and design various engineering applications involving Wave Optics.
CO2:	Understand Quantum Mechanics and apply them to diverse engineering problems.
CO3:	Analyze the nature of light propagation in guided medium for engineering applications and study in Coherence and Optical Fibers.
CO4:	Describe different Laser problems.
CO5:	Describe Material Science & Semiconductor Physics.

Course Delivery methods

CD1	Lecture by use of boards/LCD projectors/OHP projectors
CD2	Tutorials/Assignments
CD3	Seminars

BTHSMC103 Communication Skills

Course Objectives:

- To identify common communication problems that may be holding learners back
- To identify what their non-verbal messages are communicating to others
- To understand role of communication in teaching-learning process
- To learn to communicate through the digital media
- To understand the importance of empathetic listening

Course Contents

Unit I Listening

Techniques of effective listening, Listening and comprehension, Probing questions, Barriers to listening

Unit II Speaking and Non-verbal communication

Speaking: Pronunciation, Enunciation, Vocabulary, Fluency, Common Errors

Meaning of non-verbal communication, Introduction to modes of non-verbal communication, Breaking the misbeliefs, Open and Closed Body language, Eye Contact and Facial Expression

Hand Gestures, Do's and Don'ts, Learning from experts, Activities-Based Learning

Unit III Reading

Techniques of effective reading, Gathering ideas and information from a given text: Identify the main claim of the text, Identify the purpose of the text, Identify the context of the text, Identify the concepts mentioned, Evaluating these ideas and information: Identify the arguments employed in the text, Identify the theories employed or assumed in the text, Interpret the text: To understand what a text says, To understand what a text does, To understand what a text means.

Unit IV Writing and different modes of writing

Clearly state the claims, Avoid ambiguity, vagueness, unwanted generalisations and oversimplification of issues, Provide background information, Effectively argue the claim, Provide evidence for the claims, Use examples to explain concepts, Follow convention, Be properly sequenced, Use proper signposting techniques, Be well structured: Well-knit logical sequence, Narrative sequence, Category groupings, Different modes of Writing: E-mails, Proposal writing for Higher Studies, Recording the proceedings of meeting: Any other mode of writing relevant for learners

B.Tech. (CS)

Unit V Digital Literacy and Effective use of Social Media

Role of Digital literacy in professional life: Trends and opportunities in using digital technology in workplace, Internet Basics, Introduction to MS Office tools: Paint, Office, Excel, PowerPoint

Introduction to social media websites, Advantages of social media, Ethics and etiquettes of social media, How to use Google search better, Effective ways of using Social Media, Introduction to Digital Marketing

Text Books:

1. Sen Madhucchanda (2010), *An Introduction to Critical Thinking*, Pearson, Delhi
2. Silvia P. J. (2007), *How to Read a Lot*, American Psychological Association, Washington DC

Suggested Readings:

1. Public Speaking, Michael Osborn and Suzanne Osborn, Biztantra
2. Handbook of Practical Communication Skills-Chrissie Wrought, published by Jaico Publishing House.

B.Tech. (CS)

Course Outcomes:

COs	Statement
	After completion of this course, students will be able to:
CO1	Adapt effective listening skills
CO2	Learn and demonstrate effective speech.
CO3	Learn and demonstrate effective reading skills
CO4	Know and practice effective writing skills
CO5	Understand and recognize the importance of digital literacy and social media

Course Delivery methods

CD1	Lecture by use of boards/LCD projectors/OHP projectors
CD2	Tutorials/Assignments
CD3	Seminars
CD4	Self- learning advice using internets
CD5	Industrial visit

BTESC104: Programming for Problem Solving

Course Objective:

- To learn the fundamentals of computers.
- To understand the various steps in program development.
- To learn the syntax and semantics of C programming language.
- To learn the usage of structured programming approach in solving problems.

Course Contents:

Unit I: Fundamentals of Computer:

Stored program architecture of computers, Storage device- Primary memory, and Secondary storage, Random, Direct, Sequential access methods.

Unit II: Concepts of High-level, Assembly and Low-level languages, Representing algorithms through flowchart and pseudo code.

Unit III: Number system:

Data representations, Concepts of radix and representation of numbers in radix r with special cases of $r=2, 8, 10$ and 16 with conversion from radix r_1 to r_2 , r 's and $(r-1)$'s complement, Binary addition, Binary subtraction, Representation of alphabets.

Unit IV: C Programming:

Problem specification, flow chart, data types, assignment statements, input output statements, developing simple C programs, If statement, for loops, while loops, do-while loops, switch statement, break statement, continue statement.

Unit V: Development of C programs using

Arrays, functions, parameter passing ,recursion, Programming in C using these statements, Structures, files, pointers and multi file handling.

Text / Reference Books

1. Byron Gottfried, Schaum's Outline of Programming with C, McGraw-Hill
2. E. Balaguruswamy, Programming in ANSI C, Tata McGraw-Hill
3. Brian W. Kernighan and Dennis M. Ritchie, The C Programming Language, Prentice Hall of India

B.Tech. (CS)

Course Outcomes:

At the end of the course, the student will be able to:

CO1:	Know and understand the conventions of Fundamentals of Computer.
CO2:	Represent algorithms through flowchart and pseudo code.
CO3:	Learn Number system and apply these skills in developing new products.
CO4:	Understand and learn C Programming.
CO5:	Comprehend the Development of C programs using- Arrays, functions.

Course Delivery methods	
CD1	Lecture by use of boards/LCD projectors/OHP projectors
CD2	Tutorials/Assignments
CD3	Seminars
CD4	Self- learning advice using internets

BTESC 105: Basic Civil Engineering

Course Objective:

- To inculcate the essentials of Civil Engineering field to the students of all branches of Engineering.
- To provide students the significance of the Civil Engineering Profession in satisfying societal needs.

Course Contents:

Unit I Introduction to objective, scope and outcome the subject

Scope and Specialization of Civil Engineering, Role of civil Engineer in Society, Impact of infrastructural development on economy of country.

Unit II Buildings Selection of site for Buildings, Layout of Building Plan, Types of buildings, Plinth area, carpet area, floor space index, Introduction to building byelaws, concept of sun light and ventilation. Components of Buildings & their functions, Basic concept of R.C.C., Introduction to types of foundation.

Unit III Transportation Introduction to Transportation Engineering; Traffic and Road Safety: Types and Characteristics of Various Modes of Transportation; Various Road Traffic Signs, Causes of Accidents and Road Safety Measures

Unit IV Surveying Object, Principles & Types of Surveying; Site Plans, Plans & Maps; Scales & Unit of different Measurements. Linear Measurements: Instruments used. Linear Measurement by Tape, Ranging out Survey Lines and overcoming Obstructions; Measurements on sloping ground; Tape corrections, conventional symbols. Angular Measurements: Instruments used; Introduction to Compass Surveying, Bearings and Longitude & Latitude of a Line, Introduction to total station. Levelling: Instrument used, Object of leveling, Methods of leveling in brief, and Contour maps.

Unit V Environment

Environmental Pollution, Environmental Acts and Regulations, Air & Noise Pollution: Primary and Secondary air pollutants, Harmful effects of Air Pollution, Control of Air Pollution. Noise Pollution, Harmful Effects of noise pollution, control of noise pollution, Global warming & Climate Change, Ozone depletion, Green House effect

TEXTBOOKS:

1. Gopi, S., Basic Civil Engineering, Pearson Publishers
2. Kandya, A. A., Elements of Civil Engineering, Charotar Publishing house
3. Rangwala, S. C., Essentials of Civil Engineering, Charotar Publishing House
4. Rangwala, S. C. and Dalal, K. B., Engineering Materials, Charotar Publishing house

References Books:

1. Chudley, R., Construction Technology, Vol. I to IV, Longman Group, England
2. Chudley, R. and Greeno, R., Building Construction Handbook, Addison Wesley, Longman Group, England
3. McKay, W. B. and McKay, J. K., Building Construction Volumes 1 to 4, Pearson India Education Services
4. Minu, S., Basic Civil Engineering, Karunya Publications

B.Tech. (CS)

Course Outcomes:

At the end of the course, the student will be able to:

CO1:	Illustrate the fundamental aspects of Civil Engineering.
CO2:	Understand the scope of civil engineering.
CO3:	Explain the concepts of surveying for making horizontal and vertical measurements.
CO4:	Describe plan and set out of a building, also illustrate the uses of various building materials and explains the method of construction of different components of a building.
CO5:	Understand the modes of Traffic and Road Safety and Road Safety Measures

Course Delivery methods	
CD1	Lecture by use of boards/LCD projectors/OHP projectors
CD2	Tutorials/Assignments
CD3	Seminars

BTBSC106: Engineering Physics Lab

Course Objective:

- To understand the concepts of interference.
- To know about wavelength of light.
- To know about depletion layer and band gap of semiconductor.
- To know dispersion of light through prism.
- To understand the concept of magnetic field.

LIST OF EXPERIMENTS:

1. To determine the wave length of sodium light by Newton's Ring.
2. To determine the wave length of monochromatic light with the help of Fresnel's Biprism.
3. To determine the wave length of prominent lines of mercury by plane diffraction grating with the help of spectrometer.
4. Determination of band gap using a P-N junction diode.
5. To determine the height of given object with the help of sextant.
6. To determine the dispersive power of material of a prism with the help of spectrometer.
7. To study the charge and discharge of a condenser and hence determine the time constant for which both current and voltage graphs are to be plotted.
8. To determine the coherence length and coherence time of laser using He – Ne laser.
9. To measure the numerical aperture of an optical fibre.
10. To study the variation of magnetic field at the center of coil using tangent galvanometer.

B.Tech. (CS)

Course Outcomes:

At the end of the course, the student will be able to:

CO1:	Understand the usage of common Ammeter, Voltmeter and Multimeter.
CO2:	Deep learning of optical phenomenon such as Interference, diffraction and dispersion of light.
CO3:	Understand the usage of common electrical measuring instruments.
CO4:	Gain knowledge about the concept of optical fiber and Laser.
CO5:	Understand the usage of optical instruments.

Course Delivery methods

BTHSMC107: Language Lab**Course Objective:**

- To understand concepts of basic English language fundamentals.
- To understand the communication skills.
- To develop Dialogue Writing and Listening comprehension.

Detailed Syllabus

1. Phonetic Symbols and Transcriptions.
2. Extempore.
3. Group Discussion.
4. Dialogue Writing.
5. Listening comprehension.

Course Outcomes:

At the end of the course, the student will be able to:

CO1:	Understand the Phonetic Symbols and Transcriptions.
CO2:	Understand the skills required in Extempore.
CO3:	Improve their communication skills for Group Discussion.
CO4:	Improve their technical communication skills.
CO5:	Understand Dialogue Writing and Listening skills.

BTESC 108: Computer Programming Lab

Course Objective(s):

- To understand the various steps in program development.
- To learn the syntax and semantics of C programming language.
- To learn the usage of structured programming approach in solving problems.

LIST OF EXPERIMENTS:

1. To learn about the C Library, Preprocessor directive, Input-output statement.
2. Programs to learn data type, variables, If-else statement
3. Programs to understand nested if-else statement and switch statement
4. Programs to learn iterative statements like while and do-while loops
5. Programs to understand for loops for iterative statements
6. Programs to learn about array and string operations
7. Programs to understand sorting and searching using array
8. Programs to learn functions and recursive functions
9. Programs to understand Structure and Union operation
10. Programs to learn Pointer operations
11. Programs to understand File handling operations
12. Programs to input data through Command line argument

B.Tech. (CS)

Course Outcomes:

At the end of the course, the student will be able to:

CO1:	Learn about the C Library, Preprocessor directive, Input-output statement.
CO2:	Learn data type, variables, and conditional statement.
CO3:	Learn about array and string operations.
CO4:	Understand File handling operations.
CO5:	Learn programs related to C Programming and apply them to solve real world problems.

Course Delivery methods

CD1	Lecture by use of boards/LCD projectors/OHP projectors
CD2	Tutorials/Assignments
CD3	Seminars
CD4	Self- learning advice using internets

BTESC 109: Basic Civil Engineering Lab

Course Objective(s):

- To Introduce The Various Activities Regarding Measurement And Leveling
- To Water Supply Procedure And Various Discharge And Pressure Measuring Apparatuses

LIST OF EXPERIMENTS:

1. Linear Measurement by Tape:
 - a) Ranging and Fixing of Survey Station along straight line and across obstacles.
 - b) Laying perpendicular offset along the survey line
2. Compass Survey: Measurement of bearing of lines using Surveyor's and Prismatic compass
3. Levelling: Using Tilting/ Dumpy/ Automatic Level
 - a) To determine the reduced levels in closed circuit.
 - b) To carry out profile levelling and plot longitudinal and cross sections for road by Height of Instrument and Rise & Fall Method.
4. To study and take measurements using various electronic surveying instruments like EDM, Total Station etc.
5. To determine pH, hardness and turbidity of the given sample of water.
6. To study various water supply Fittings.
7. To determine the pH and total solids of the given sample of sewage.
8. To study various Sanitary Fittings.

B.Tech. (CS)

Course Outcomes:

At the end of the course, the student will be able to:

CO1:	Conduct survey and collect field data.
CO2:	Review field notes from survey data.
CO3:	Interpret survey data and compute areas and volumes.
CO4:	Describe Total station and measurement
CO5:	Describe various water fittings and find out the various fluids properties

Course Delivery methods	
CD1	Lecture by use of boards/LCD projectors/OHP projectors
CD2	Tutorials/Assignments
CD3	Seminars
CD4	Self- learning advice using internets

BTESC110: Computer Aided Engineering Graphics

Course Objectives:

- To Increase ability to communicate with people
- To learn to sketch and take object dimensions.
- To learn to take data and transform it into graphic drawings.

Introduction: Principles of drawing, lines, type of lines, usage of Drawing instruments, lettering, Conic sections including parabola, hyperbola, Rectangular Hyperbola (General method only); Scales-Plain, Diagonal and Vernier Scales.

Projections of Point & Lines: Position of Point, Notation System, Systematic Approach for projections of points, front view & Top view of point, Position of straight lines, line parallel to Both the RPs, Line perpendicular to either of the RPs, Line inclined to one RP and parallel to the other, Line inclined to Both the RPs, Traces of a line (One drawing sheet, one assignment in sketch book).

Projection of Planes: Positions of planes, Terms used in projections of planes, plane parallel to RP, plane inclined to one RP and perpendicular to the other RP, plane perpendicular to Both the RPs, plane Inclined to Both the RPs, True shape of the plane, Distance of a point from plane, Angle between two planes.

Projections of Regular Solids: frustum and truncated solids, those inclined to both the Planes-Auxiliary Views.

Section of Solids: Theory of sectioning, section of prisms and cubes, section of pyramids and Tetrahedron section of Cylinders, section of cones, section of spheres (One drawing sheet, one assignment in sketch book)

Overview of Computer Graphics: Covering theory of CAD software [such as: The menu System, Toolbars (standard, Object Properties, Draw, Modify and Dimension), Drawing Area (Background, Crosshairs, Coordinate System), Dialog boxes and windows, Shortcut menus (Button Bars), Command Line (where applicable), The Status Bar, Different methods of zoom as used in CAD, Select and erase objects.: Isometric Views of lines, Planes, Simple and compound Solids.

B.Tech. (CS)

Course Outcomes:

At the end of the course, the student will be able to:

CO1:	Know and understand the conventions and the method of engineering drawing.
CO2:	Interpret engineering drawings using fundamentals of different views to construct basic and intermediate geometry.
CO3:	Know the Theory of sectioning and Section of Solids.
CO4:	Comprehend the theory of projection.
CO5:	Improve their drawing skill in the form of Computer Graphics.

Course Delivery methods

BTSODECA111: Social Outreach, Discipline & Extra Curricular Activities

Course Outcomes:

At the end of the course, the student will be able to:

CO1:	Develop their self-confidence, leadership qualities, and their responsibilities towards the community.
CO2:	Have an impact on academic development, personal development, and civic responsibility
CO3:	Understand the value of Social Work.
CO4:	Understand the Significance of Discipline in student's Life
CO5:	Contribute towards in social up-gradation by social organization like, Art of Living, Yoga etc., Blood donation, Awareness programs, personality development programs,

BTBSC 112: ANANDAM

Objectives:

- To instil the joy of giving in young people, turning them into responsible citizens to build up a better society.
- To inculcate the habit of service in students across the University.
- A compulsory course of 2 credits per semester to be included in each program of University.
- Students to be expected to engage in individual and group acts of service and goodness.

Action Plan:

Students will be expected to

- Do at least one act of individual service each day
- Record this act of service in a dedicated Register / Personal Diary
- Share this Register / Personal Diary day in the Anandam Class scheduled per week. The class interaction will include Personal Diary check, Showing of Community based motivation videos, Community based presentations by students, Role playing etc.
- Undertake one group service project for 64 hours every semester (outside college hours)
- Upload the report on the group project on the Anandam platform
- Participate in a sharing and presentation on the group service in the discussion sessions held once in week
- There will be some suggested projects and organizations that students can work with. Students can also suggest their own projects which others can join

Each student will finish the year with a portfolio of giving. This will include their Register / Personal Diaries and their reports on group service projects.

BTBSC201: Engineering Mathematics-II

Course Objective:

- To provide detailed of **matrices** which is applied for solving system of linear equations and useful in various fields of technology.
- To understand the course is an introduction to partial differential equations.
- To understand the various numerical methods and techniques used to find solutions to differential equations and linear programming problems.

Course Content:

Unit I: Partial Differential Equations –Linear Partial differential equations of First order, Lagrange’s Form, Non Linear Partial Differential equations of first order, Charpit’s method, Standard forms. Separation of variables method to solve the simple problems in Cartesian coordinates.

Unit II: Linear Algebra: Vectors and Matrices, Addition and Multiplication, Norms, Linear Independence, Linear Transformation, Bases, Dimensions, Inner Product, Rank, Inverse, Orthogonality, Matrix factorizations, Translation, Dilation, Rotation, Reflection in a point, line and plane. Matrix form of basic geometric transformations.

Unit III: Linear Algebra: Rank of matrix System of linear equations; Symmetric, skew symmetric and orthogonal matrices; Eigen values and Eigen vectors; Diagonalization of matrices; Cayley-Hamilton Theorem, and Orthogonal transformation.

Unit IV: Numerical Methods: Finite differences, Relation between operators, Methods to solve algebraic and transcendental equations, numerical methods to solve ordinary differential equations, finite difference methods, Finite element method.

Unit V: Linear Programming Problems: Linear Programming Problems, Graphical Approach, simplex method, Assignment and Transportation problems

B.Tech. (CS)

Course Outcomes:

At the end of the course, the student will be able to:

CO1:	Determine the solutions to partial differential equations.
CO2:	Understand the concepts of vector space and linear transformations.
CO3:	Understand and to solve the matrices, Rank of a matrix, Eigen values and Eigen vectors, System of linear equations.
CO4:	Use various numerical methods and techniques to solve algebraic and differential equations.
CO5:	Understand and to solve linear programming problems.

BTBSC202: Engineering Chemistry

Course Objective:

- To acquire the knowledge about impurities in water, their determination and purification.
- To learn about different types of fuel and lubricant and their applications.
- To gain the basic knowledge, applications and control methods of corrosion.
- To get the knowledge of preparation and significance of explosives, cement, refractories and glass.
- To get the knowledge of organic reaction mechanism and their uses with different types of drugs

Course Contents:

Unit I: Water

Common impurities, hardness, determination of hardness by complexometric (EDTA method), Degree of hardness, Units of hardness Municipal water supply: Requisite of drinking water, Purification of water; sedimentation, filtration, disinfection, breakpoint chlorination. Boiler troubles: Scale and Sludge formation, Internal treatment methods, Priming and Foaming, Boiler corrosion and Caustic embrittlement Water softening; Lime-Soda process, Zeolite (Permutit) process, Demineralization process. Numerical problems based on Hardness, EDTA, Lime-Soda and Zeolite process.

Unit II: Organic Fuels

Solid fuels: Coal, Classification of Coal, Proximate and Ultimate analyses of coal and its significance, Gross and Net Calorific value, Determination of Calorific value of coal by Bomb Calorimeter. Metallurgical coke, Carbonization processes; Otto-Hoffmann byproduct oven method. Liquid fuels : Advantages of liquid fuels, Mining, Refining and Composition of petroleum, Cracking, Synthetic petrol, Reforming, Knocking, Octane number, Anti-knocking agents, Cetane number Gaseous fuels; Advantages, manufacturing, composition and Calorific value of coal gas and oil gas, Determination of calorific value of gaseous fuels by Junker's calorimeter Numerical problems based on determination of calorific value (bomb calorimeter/Junkers calorimeter/Dulong's formula, proximate analysis & ultimate and combustion of fuel.

Unit III: Corrosion and its control

Definition and significance of corrosion, Mechanism of chemical (dry) and electrochemical (wet) corrosion, galvanic corrosion, concentration corrosion and pitting corrosion. Protection from corrosion; protective coatings-galvanization and tinning, cathodic protection, sacrificial anode and modifications in design.

Unit IV: Engineering Materials

Portland Cement; Definition, Manufacturing by Rotary kiln. Chemistry of setting and hardening of cement. Role of Gypsum. Glass: Definition, Manufacturing by tank furnace, significance of annealing, Types and properties of soft glass, hard glass, borosilicate glass, glass wool, safety glass Lubricants: Classification, Mechanism, Properties; Viscosity and viscosity index, flash and fire point, cloud and pour point. Emulsification and steam emulsion number.

B.Tech. (CS)

Unit V: Organic reaction mechanism and introduction of drugs

Organic reaction mechanism: Substitution; SN1, SN2, Electrophilic aromatic substitution in benzene, free radical halogenations of alkanes, Elimination; elimination in alkyl halides, dehydration of alcohols, Addition: electrophilic and free radical addition in alkenes, nucleophilic addition in aldehyde and ketones, Rearrangement; Carbocation and free radical rearrangements Drugs : Introduction, Synthesis, properties and uses of Aspirin, Paracetamol

B.Tech. (CS)

Course Outcomes:

At the end of the course, the student will be able to:

CO1:	Gain knowledge about impurities in water, their determination and purification.
CO2:	Understand organic fuels and various emerging new areas of organic chemistry.
CO3:	Learn about Corrosion and its control.
CO4:	Get knowledge about the chemistry of some Engineering Materials like Portland Cement.
CO5:	Understand and study Organic reaction mechanisms.

BTHSMC203: Human Values

Course Objective:

- To Know the basic guidelines, content and Process for Value Education
- To develop understanding different Harmony concept.
- To understand professional ethics and natural acceptance of human values.

Course Contents:

Unit I: Course Introduction - Need, Basic Guidelines, Content and Process for Value Education

Understanding the need, basic guidelines, Self Exploration – its content and process; ‘Natural Acceptance’ and Experiential Validation, Continuous Happiness and Prosperity- Human Aspirations, Right understanding, Relationship and Physical Facilities, Understanding Happiness and Prosperity correctly- A critical appraisal of the current scenario. Method to fulfill the above human aspirations: understanding and living in harmony at various levels

Unit II: Understanding Harmony in the Human Being - Harmony in Myself

Understanding human being as a co-existence of the sentient ‘I’ and the material ‘Body’ Understanding the needs of Self (‘I’) and ‘Body’ - Sukh and Suvidha Understanding the Body as an instrument of ‘I’, Understanding the characteristics and activities of ‘I’ and harmony in ‘I’ Understanding the harmony of I with the Body: Sanyam and Swasthya; correct appraisal of Physical needs, meaning of Prosperity in detail, Programs to ensure Sanyam and Swasthya.

Unit III: Understanding Harmony in the Family and Society- Harmony in Human-Human Relationship

Understanding harmony in the Family, Understanding values in human-human relationship; meaning of Nyaya and program for its fulfillment to ensure Ubhay-tripti; Trust (Vishwas) and Respect (Samman) , meaning of Vishwas; Difference between intention and competence, meaning of Samman, Difference between respect and differentiation; the other salient values in relationship, harmony in the society , Samadhan, Samridhi, Abhay, Sah-astitva as comprehensive Human Goals , Visualizing a universal harmonious order in society- Undivided Society (AkhandSamaj), Universal Order (SarvabhaumVyawastha)- from family to world family.

Unit IV: Understanding Harmony in the Nature and Existence – Whole existence as Coexistence

Understanding the harmony in the Nature. Interconnectedness and mutual fulfillment among the four orders of nature- recyclability and self-regulation in nature. Understanding Existence as Co-existence (Sah-astitva) of mutually interacting Units in all pervasive Space. Holistic perception of harmony at all levels of existence

Unit V: Implications of the above Holistic Understanding of Harmony on Professional Ethics. Natural acceptance of human values

Definitiveness of Ethical Human Conduct. Basis for Humanistic Education, Humanistic Constitution and Humanistic Universal Order. Competence in Professional Ethics: a) Ability to utilize the professional competence for augmenting universal human order, b) Ability to identify the scope and characteristics of people-friendly and eco-friendly production systems, technologies and management models. Strategy for transition from the present state to Universal Human Order: At the level of individual: as socially and ecologically responsible engineers, technologists and managers. Case studies related to values in professional life and individual life.

B.Tech. (CS)

Course Outcomes:

At the end of the course, the student will be able to:

CO1:	Understand and analyze Basic Guidelines, Content and Process for Value Education.
CO2:	Understand Harmony in the Human Being - Harmony in Myself.
CO3:	Understand Harmony in the Family and Society- Harmony in Human-Human Relationship.
CO4:	Understand Harmony in the Nature and Existence – Whole existence as Coexistence.
CO5:	Understand of Harmony on Professional Ethics. Natural acceptance of human values.

BTESC 204: Basic Mechanical Engineering

Course Objectives:

- To Increase ability to understand machine working
- To Learn to understand fundamentals of mechanical systems
- To Learn to make different mechanical aspects of engineering

Course Contents:

Unit I: Fundamentals:

Introduction to mechanical engineering, concepts of thermal engineering, mechanical machine design, industrial engineering and manufacturing technology. Steam Boilers classification and types of steam boilers and steam turbines. Introduction and Classification of power plants.

Unit II: Pumps and IC Engines:

Applications and working of Reciprocating and Centrifugal pumps. Introduction, Classification of IC Engines, Main Components of IC Engines, Working of IC Engines and its components.

Unit III: Refrigeration and Air Conditioning:

Introduction, classification and types of refrigeration systems and air-conditioning. Applications of refrigeration and Air-conditioning.

Unit IV: Transmission of Power:

Introduction and types of Belt and Rope Drives, Gears.

Unit V: Primary Manufacturing Processes: Metal Casting Process: Introduction to Casting Process, Patterns, Molding, Furnaces. Metal Forming Processes: Introduction to Forging, Rolling, Extrusion, Drawing. Metal Joining Processes: Introduction to various types of Welding, Gas Cutting, Brazing, and Soldering.

Text Books:

BTESC205: Basic Electrical Engineering

Course Objective:

- To understand the basic concept of Electrical engineering instruments for engineering applications.
- To understand the basic electrical engineering parameters and their importance.
- To understand the concept of various laws and principles associated with electrical systems.
- To develop the knowledge to apply concepts in the field of electrical engineering, projects and research.

Course Contents:

Unit I: DC Circuits:

Electrical circuit elements (R, L and C), voltage and current sources, Kirchhoff current and voltage laws, Series-Parallel circuits, Node voltage method, Mesh current method, Superposition, Thevenin's, Norton's and Maximum power transfer theorems.

Unit II: AC Circuits:

Representation of sinusoidal waveforms, peak and r.m.s values, phasor representation, real power, reactive power, apparent power, power factor. Analysis of single-phase AC circuits consisting of R, L,C, RL, RC and RLC combinations (series and parallel), resonance. Three phase balanced circuits, voltage and current relations in star and delta connections.

Unit III: Transformers:

Ideal and practical transformer, EMF equation, equivalent circuit, losses in transformers, regulation and efficiency.

Unit IV: Electrical Machines:

Generation of rotating magnetic fields, Construction and working of a three-phase induction motor, Significance of torque-slip characteristic. Starting and speed control of induction motor, single phase induction motor. Construction, working, torque-speed characteristic and speed control of separately excited DC motor. Construction and working of synchronous generators.

Unit V: Power Converters:

Semiconductor PN junction diode and transistor (BJT). Characteristics of SCR, power transistor and IGBT. Basic circuits of single phase rectifier with R load, Single phase Inverter, DC-DC converter.

4. Hughes, "Electrical and Electronics Technology", Pearson, 2010.

B.Tech. (CS)

Course Outcomes:

At the end of the course, the student will be able to:

CO1:	Apply basic skills for designing various instruments for engineering applications.
CO2:	Determine error in laboratory measurements and techniques used to minimize such error.
CO3:	Gain knowledge regarding the various laws and principles associated with electrical systems.
CO4:	Understand electrical machines and apply them for practical problems.
CO5:	Understand the concepts in the field of electrical engineering, projects and research.

Course Delivery methods

BTHSMC206: Environmental Studies

Course Objective:

- To understand the basics of ecosystem and environment
- To understand about different types of pollution.
- To learn about waste, energy sources and sustainable energy.

Course Contents:

Unit-I Basics of Environment: Components and types of ecosystem, Structure and functions of ecosystem, Energy flow in ecosystem .Type and levels of Biodiversity, Values, Causes of extension, and Conservation methods of biodiversity.

Unit-II Pollution: Types of Pollutants, air pollution, harmful effects of air pollution, control of air pollution, water pollution, harmful effects of water pollution, control of water pollution, noise Pollution harmful effects of noise pollution, control of noise pollution, radioactive pollution, harmful effects of radioactive pollution, control of radioactive pollution.

Unit-III Solid Waste Management: Classification of solid waste, Collection, transportation, treatment, and disposal methods of solid waste, economic recovery of solid waste.

Unit-IV Renewable Energy Sources: Introduction, renewable sources of energy: solar energy, wind energy, energy from ocean, energy from biomass, geothermal energy and nuclear Energy.

Unit-V Issues of Environment: Sustainable development, water conservation, environmental education, environmental acts. Types of disasters, their causes, impact and preventive measures.

Recommended Books:

2. D.K. Sinha, Towards Basics of Natural Disaster Reduction, Research co Book Center, Delhi.
3. M.N. Rao and H.V.N.Rao, Air Pollution, Tata McGraw-Hill, ISBN-13 978-0-07-451871-7, 2013.
4. Ranjeeta Soni, Environmental Studies and Disaster management New India Publication Agency (NIPA), New Delhi, ISBN: 978-93-91383-02-2, October 2021.
5. R.C. Gaur, Basic Environmental Engineering New Age International Publication.

B.Tech. (CS)

Course Outcomes

At the end of the course, the student will be able to:

CO1:	To understand the basic concepts and components of ecosystem and environment. Ecosystem Links between environmental components and their role.
CO2:	To understand the basic concepts of pollution and their sources and effects and to apply the control technologies related pollutions.
CO3:	To understand the types of wastes and their generation sources and to also know disposal technologies of waste and reuse and recycle of the waste.
CO4:	To know the concepts of renewable energy resources and their types and create the various applications of renewable resources and current potentials of energy resources.
CO5:	To understand the concept of sustainable development and create the methods for water conservation and apply the disaster control technologies.

BTBSC 207: Engineering Chemistry Lab

Course Objective:

- To understand the method for the determination of hardness in water and purification process.
- To understand about different types of volumetric analysis.
- To learn about properties of lubricant oil.
- To Synthesize a small drug molecule and analyse a salt sample

List of Experiments:

1. Determination the hardness of water by EDTA method
2. Determination of residual chlorine in water
3. Determination of dissolved oxygen in water
4. Determination of the strength of Ferrous Ammonium sulphate solution with the help of $K_2Cr_2O_7$ solution by using diphenyl amine indicator
5. Determination of the strength of $CuSO_4$ solution iodometrically by using hypo solution
6. Determination of the strength of $NaOH$ and Na_2CO_3 in a given alkali mixture
7. Proximate analysis of Coal
8. Determination of the flash & fire point and cloud & pour point of lubricating oil
9. Determination of the kinematic viscosity of lubricating oil by Redwood viscometer no. 1 at different temperature
10. Synthesis of Aspirin/ Paracetamol

B.Tech. (CS)

Course Outcomes:

At the end of the course, the student will be able to:

CO1:	Understand the method for the determination of hardness in water and purification process.
CO2:	Understand about different types of volumetric analysis.
CO3:	Learn about properties of lubricant oil.
CO4:	Synthesize a small drug molecule and analyse a salt sample
CO5:	Determine quantitative estimation of dissolve chemicals in water.

BTHSM208: Human Values Activities

Course Objective:

- To Understand the basic guidelines, content and process for value education.
- To develop understanding different Harmony concept.
- To understand professional ethics and natural acceptance of human values.

Course Contents:

PS 1:

Introduce yourself in detail. What are the goals in your life? How do you set your goals in your life? How do you differentiate between right and wrong? What have been your salient achievements and shortcomings in your life? Observe and analyze them.

PS 2:

Now-a-days, there is a lot of talk about many technogenic maladies such as energy and material resource depletion, environmental pollution, global warming, ozone depletion, deforestation, soil degradation, etc. - all these seem to be manmade problems, threatening the survival of life Earth - What is the root cause of these maladies & what is the way out in opinion? On the other hand, there is rapidly growing danger because of nuclear proliferation, arms race, terrorism, breakdown of relationships, generation gap, depression & suicidal attempts etc. - what do you think, is the root cause of these threats to human happiness and peace - what could be the way out in your opinion?

PS 3:

1. Observe that each of us has the faculty of 'Natural Acceptance', based on which one can verify what is right or not right for him. (As such we are not properly trained to listen to our 'Natural Acceptance' and may a time it is also clouded by our strong per-conditioning and sensory attractions). Explore the following:
 - (i) What is 'Naturally Acceptable' to you in relationship the feeling of respect or disrespect for yourself and for others?
 - (ii) What is 'naturally Acceptable' to you - to nurture or to exploit others? Is your living in accordance with your natural acceptance or different from it?
2. Out of the three basic requirements for fulfillment of your aspirations – right understanding, relationship and physical facilities - observe how the problems in your family are related to each. Also observe how much time & effort you devote for each in your daily routine.

PS 4:

List down all your important desires. Observe whether the desire is related to Self (I) the Body. If it appears to be related to both, visualize which part of it is related to Self (I) and which part is related to Body.

PS 5:

1.
 - a. Observe that any physical facility you use, follows the given sequence with time: Necessary and tasteful - unnecessary but still tasteful - unnecessary and tasteless - intolerable
 - b. In contrast, observe that any feeling in you is either naturally acceptable or not acceptable at all. If not acceptable, you want it continuously and if not acceptable, you do not want it any moment!
2. List down all your important activities. Observe whether the activity is of 'I' or of Body or with the participation of both or with the participation of both 'I' and Body.

B.Tech. (CS)

3. Observe the activities within 'i'. Identify the object of your attention for different moments (over a period of sy 5 to 10 minutes) and draw a line diagram connecting these points. Try observe the link between any two nodes.

PS 6:

1. Chalk out some programs towards ensuring your harmony with the body – in terms of nurturing, protection and right utilization of the body.
2. Find out the plants and shrubs growing in and around your campus, which can be useful in curing common diseases.

PS 7:

Form small groups in the class and make them carry out a dialogue focusing on the following eight questions related to 'TRUST';

- 1a. Do I want to make myself happy?
- 2a. Do I want to make the other happy?
- 3a. Does the other want to make himself/herself happy?
- 4a. Does the other want to make me happy?

What is the answer?

Intention (Natural Acceptance)

- 1b. Am I able to always make myself happy?
- 2b. Am I able to always make the other happy?
- 3b. Is the other able to always make himself/herself happy?

What is the answer?

Let each student answer the questions for himself and everyone else. Discuss the difference between intention and competence. Observe whether you evaluate yourself and others on the basis of intention/competence.

PS 8:

1. Observe, on how many occasions, you are able to respect your related ones (by doing the right evaluation) and on how many occasions you are disrespecting by way of under-evaluation, over-evaluation or otherwise evaluation.
2. Also, observe whether your feeling of respect is based on treating the other as you would treat yourself or on differentiations based on body, physical facilities or beliefs.

PS 9:

1. Write a narration in the form of a story, poem, skit or essay to clarify a salient Human Value to the children.
2. Recollect and narrate an incident in your life where you were able to exhibit willful adherence to values in a difficult situation.

PS 10:

List down some common Units (things) of Nature which you come across in your daily life and classify them in the four orders of Nature. Analysis and explain the aspect of mutual fulfillment of each Unit with other orders.

PS 11:

Make a chart to show the whole existence as co-existence. With the help of this chart try to identify the role and the scope of some of the courses of your study. Also indicate the areas which are being either over-emphasized or ignored in the present context.

B.Tech. (CS)

PS 12:

Identify any two important problems being faced by the society today and analyze the root cause of these problems. Can these be solved on the basis of natural acceptance of human values. If so, how should one proceed in this direction from the present situation?

PS 13:

1. Suggest ways in which you can use your knowledge of Science/Technology/Management etc. for moving towards a universal human order.
2. Propose a broad outline for humanistic Constitution at the level of Nation.

PS 14:

The course is going to be over now. It is time to evaluate what difference in your thinking it has made. Summarize the core message of this course grasped by you. How has this affected you in terms of;

- a. Thought
- b. Behavior
- c. Work and
- d. Realization

What practical steps are you able to visualize for the transition of the society from its present state.

Project:

Every student required to take-up a social project e.g. educating children in needy/weaker section, services in hospitals, NGO's and other such work i.e. social work at villages adopted by respective institute/ college.

B.Tech. (CS)

Course Outcomes:

At the end of the course, the student will be able to:

CO1:	Analyze Basic Guidelines, Content and Process for Value Education.
CO2:	Understanding Harmony in the Human Being - Harmony in Myself.
CO3:	Understand Harmony in the Family and Society- Harmony in Human-Human Relationship. Recollect and narrate an incident in your life.
CO4:	Understand Harmony in the Nature and Existence – Whole existence as Coexistence. Summarize the core message of this course grasped by you.
CO5:	List and Implicate the above Holistic Understanding of Harmony on Professional Ethics. Natural acceptance of human values.

BTESC 209: Manufacturing Practices Workshop

Course Objectives:

- To discuss the modules include training on different trades like Fitting, Carpentry and Casting
- To learn various joints are made using wood and other metal pieces.
- To develop machining skills in students.

Carpentry Shop

1. T – Lap joint
2. Bridle joint

Foundry Shop

3. Mould of any pattern
4. Casting of any simple pattern

Welding Shop

5. Lap joint by gas welding
6. Butt joint by arc welding
7. Lap joint by arc welding
8. Demonstration of brazing, soldering & gas cutting

Machine Shop Practice

9. Job on lathe with one step turning and chamfering operations

Fitting and Sheet Metal Shop

10. Finishing of two sides of a square piece by filing
11. Making mechanical joint and soldering of joint on sheet metal
12. To cut a square notch using hacksaw and to drill a hole and tapping

B.Tech. (CS)

Course Outcomes:

At the end of the course, the student will be able to:

CO1:	Describe cast different parts through Carpentry.
CO2:	Define control manufacturing via computers.
CO3:	Understanding use power tools and fitting tools.
CO4:	Knowledge of various welding operations
CO5:	Understanding different metallic and non-metallic objects.

Course Delivery methods

BTESC 210: Basic Electrical Engineering Lab

Course Objectives:

- To understand training on different trades like Fitting, Carpentry and Casting
- To learn various joints are made using wood and other metal pieces.
- To develop machining skills in students.

List of Experiments

1. Basic safety precautions. Introduction and use of measuring instruments –voltmeter, ammeter, multi-meter, oscilloscope. Real-life resistors, capacitors and inductors.
2. Transformers: Observation of the no-load current waveform on an oscilloscope. Loading of a transformer: measurement of primary and secondary voltages and currents, and power.
3. Three-phase transformers: Star and Delta connections. Voltage and Current relationships (line-line voltage, phase-to-neutral voltage, line and phase currents).Phase-shifts between the primary and secondary side.
4. Demonstration of cut-out sections of machines: dc machine (commutate or brush arrangement), induction machine (squirrel cage rotor), synchronous (field winding - slip ring arrangement) and single-phase induction
5. Torque Speed Characteristic of separately excited dc motor.
6. Demonstration of (a) dc-dc converters (b) dc-ac converters – PWM waveform (c) the use of dc-ac converter for speed control of an induction motor and (d) Components of LT switchgear.

B.Tech. (CS)

Course Outcomes:

At the end of the course, the student will be able to:

CO1:	Adapt knowledge regarding the various laws and principles associated with electrical systems.
CO2:	Adapt knowledge regarding electrical machines and apply them for practical problems.
CO3:	Understand various types' Electrical Equipments.
CO4:	Understanding digital measuring equipments.

BTESC 211: Computer Aided Machine Drawing

Course Objective:

- To design, develop and analyze simple linear and non linear computer based drawing.
- To identify and apply the suitable knowledge of computers to understand the shape and size of Drawing Objects.

Course Contents:

Introduction: Principles of drawing, conventional representation of machine components and materials, lines, types of lines, dimensioning types, rules of dimensioning.

Conversion of pictorial views into orthographic views: (1 drawing sheet) Introduction to orthographic projection, concept of first angle and third angle projection, drawing of simple machine elements in first angle projection, missing view problems covering Principles of Orthographic Projections.

Sectional views of mechanical components: (1 drawing sheet) Introduction, cutting plane line, type of sectional views-full section, half section, partial or broken section, revolved section, removed section, offset section, sectioning conventions-spokes, web rib, shaft, pipes, different types of holes, conventions of section lines for different metals and materials.

Fasteners and other mechanical components: (Free hand sketch) Temporary and permanent fasteners, thread nomenclature and forms, thread series, designation, representation of threads, bolted joints, locking arrangement of nuts, screws, washers, foundation bolts etc., keys, types of keys, cotter and knuckle joints. Riveted joints, rivets and riveting, type of rivets, types of riveted joints etc. Bearing: Ball, roller, needle, foot step bearing. Coupling: Protected type, flange, and pin type flexible coupling. Other components: Welded joints, belts and pulleys, pipes and pipe joints, valves etc.

Overview of Computer Graphics: (2 drawing sheets) Covering theory of CAD software such as: The menu System, Toolbars (Standard, Object Properties, Draw, Modify and Dimension), Drawing Area (Background, Crosshairs, Coordinate System), Dialog boxes and windows, Shortcut menus (Button Bars), Command Line (Where applicable), The Status Bar, Different methods of zoom as used in CAD, Select and erase objects.: Isometric Views of Lines, Planes, Simple and compound Solids.

B.Tech. (CS)

Course Outcomes:

At the end of the course, the student will be able to:

CO1:	Understand the conventions and the method of engineering drawing.
CO2:	Interpret engineering drawings using fundamentals of different views to construct basic and intermediate geometry.
CO3:	Adapt theory of sectioning and Section of Solids.
CO4:	Classify the theory of projection.
CO5:	Understand drawing skill in the form of Computer Graphics.

BTSODECA212: Social Outreach, Discipline & Extra Curricular Activities

Course Outcomes:

At the end of the course, the student will be able to:

CO1:	Develop their self-confidence, leadership qualities, and their responsibilities towards the community.
CO2:	Have an impact on academic development, personal development, and civic responsibility
CO3:	Understand the value of Social Work.
CO4:	Understand the Significance of Discipline in student's Life
CO5:	Contribute towards in social up-gradation by social organization like, Art of Living, Yoga etc., Blood donation, Awareness programs, personality development programs,

BTBSC213: ANANDAM

Objectives:

- To instil the joy of giving in young people, turning them into responsible citizens to build up a better society.
- To inculcate the habit of service in students across the University.
- A compulsory course of 2 credits per semester to be included in each program of University.
- Students to be expected to engage in individual and group acts of service and goodness.

Action Plan:

Students will be expected to

- Do at least one act of individual service each day
- Record this act of service in a dedicated Register / Personal Diary
- Share this Register / Personal Diary day in the Anandam Class scheduled per week. The class interaction will include Personal Diary check, Showing of Community based motivation videos, Community based presentations by students, Role playing etc.
- Undertake one group service project for 64 hours every semester (outside college hours)
- Upload the report on the group project on the Anandam platform
- Participate in a sharing and presentation on the group service in the discussion sessions held once in week
- There will be some suggested projects and organizations that students can work with. Students can also suggest their own projects which others can join

Each student will finish the year with a portfolio of giving. This will include their Register / Personal Diaries and their reports on group service projects.

Semester–III

BTCSEBSC 301: Discrete Mathematics Structure

Course Objective:

- To develop logical thinking and its application to computer science, especially to emphasize the importance of proving statements correctly
- To deemphasize the hand-waving approach towards correctness of an argument.
- To enhance one's ability to reason and ability to present a coherent and mathematically accurate argument.
- To build theoretical concepts behind various higher level concepts such as graphs.
- To learn the proof systems, combinatorics, number theory and graph theory and their relevance for the computer science.

Course Contents:

Unit I: Notion of proof: Propositional and predicate logic, proof by counterexample, the contra positive, proof by contradiction, inductive proofs. Propositional and predicate logic

Unit II: Number Theory- Divisibility, Euclidean algorithm, prime numbers, Fundamental Theorem of Arithmetic, greatest common divisors, Fermat's little theorem, Congruence's, solution of congruence's, Chinese remainder theorem, Euler's phi function, Quadratic residues and reciprocity, Jacobi Symbol, binary quadratic forms, equivalence and reduction of binary forms, sums of two squares, greatest integer function, arithmetic functions,

Unit III: Combinatorial number theory: Basic counting techniques, pigeon-hole principle, recurrence relations, generating functions, Polya's counting theorem. Introduction to probabilistic method in combinatorics, Inclusion-exclusion principle, Techniques of numerical calculation, Public key Cryptography.

Unit IV: Graph Theory- Introduction to graphs. Order, size, degree. Walks, paths, cycles. Complements. Sub graphs, cliques. Isomorphism. Connectedness and connected components. Trees and spanning trees .Distance, radius, diameter, girth .Vertex connectivity, edge connectivity.

Unit V: Graph Theory: Eulerian and Hamiltonian graphs. Measures of centrality – degree centrality, closeness centrality, betweenness centrality. Matrices associated with graphs – adjacency, incidence, Laplacian, and distance matrices. Eigenvalues and eigenvectors. Directed graphs. Graph algorithms – spanning tree algorithm, Dijkstra's algorithm, Floyd-Warshall algorithm.

B.Tech. (CS)

Course Outcomes:

At the end of the course, the student will be able to:

CO1:	Construct simple mathematical proofs and to verify them Have substantial experience to comprehend formal logical arguments .skillful in expressing mathematical properties formally via the formal language of propositional logic and predicate logic
CO2:	Understand and implement the number theory
CO3:	Apply the knowledge of combinatorics and its applications such as pigeon hole principles, recurrence relations, generator functions, counting principles etc.
CO4:	Understand the graph theory.
CO5:	Build upon the graph theory principles to solve a variety of computing applications.

Course Delivery methods

BTCSPCC 302: Object Oriented Programming

Course Objective:

- To Perform object oriented programming to develop solutions to problems demonstrating usage of control structures, modularity, I/O. and other standard language constructs.
- To Demonstrate adeptness of object oriented programming in developing solutions to problems demonstrating usage of data abstraction, encapsulation, and inheritance.
- To demonstrate ability to implement one or more patterns involving realization of an abstract interface and utilization of polymorphism in the solution of problems which can take advantage of dynamic dispatching.
- To Learn syntax, features of, and how to utilize the Standard Template Library. Learn other features of the C++ language including templates, exceptions, forms of casting, conversions, covering all features of the language.

Course Contents:

- Unit-1** Introduction to different programming paradigm, characteristics of OOP, Class, Object, data member, member function, structures in C++, different access specifies, defining member function inside and outside class, array of objects.
- Unit-2** Concept of reference, dynamic memory allocation using new and delete operators, inline functions, function overloading, function with default arguments, constructors and destructors, friend function and classes, using this pointer.
- Unit-3** Inheritance, types of inheritance, multiple inheritance, virtual base class, function overriding, abstract class and pure virtual function
- Unit-4** Constant data member and member function, static data member and member function, polymorphism, operator overloading, dynamic binding and virtual function
- Unit-5** Exception handling, Template, Stream class, File handling.

- John R. Hubbard, Programming with C++, McGraw Hill International.

B.Tech. (CS)

Course Outcomes:

At the end of the course, the student will be able to:

CO1:	Underline the features of C++ supporting object oriented programming.
CO2:	Describe the relative merits of C++ as an object oriented programming language.
CO3:	Use how to produce object-oriented software using C++.
CO4:	Describe how to apply the major object-oriented concepts to implement object oriented programs in C++, encapsulation, inheritance and polymorphism.
CO5:	Understand advanced features of C++ specifically stream I/O, templates and operator overloading.

BTCSESC 303: Digital Electronics

Course Objectives:

- To convert different type of codes and number systems which are used in digital transmission and computer systems.
- To apply the codes and number systems converting circuits and Compare different types of logic families which are the basic Unit of different types of logic gates in the domain of economy, performance and efficiency?
- To Analyze different types of digital electronic circuit using various mapping and logical Tools and know the techniques to prepare the most simplified circuit using various mapping and mathematical methods.
- To Design different types of with and without memory element digital electronic circuits for particular operation, within the real time of economic, performance, efficiency, user friendly and environmental constraints.
- To Assess the nomenclature and technology in the area of various memory devices used and apply the memory devices in different types of digital circuits for real world application.

Course Contents:

- Unit-1 Fundamental concepts:** Number systems and codes, Basic logic Gates and Boolean algebra: Sign & magnitude representation, Fixed point representation, complement notation, various codes & arithmetic in different codes & their inter conversion. Features of logic algebra, postulates of Boolean algebra. Theorems of Boolean algebra
- Unit-2 Minimization Techniques and Logic Gates:** Principle of Duality - Boolean expression -Minimization of Boolean expressions — Minterm – Maxterm - Sum of Products (SOP) – Product of Sums (POS) – Karnaugh map Minimization – Don't care conditions– Quine – Mc Cluskey method of minimization.
- Unit-3 Digital Logic Gate Characteristics:** TTL logic gate characteristics. Theory & operation of TTL NAND gate circuitry. Open collector TTL. Three state output logic. TTL subfamilies.MOS& CMOS logic families. Realization of logic gates in RTL, DTL, ECL, C-MOS & MOSFET.
- Unit-4 Combinational Circuits:** Combinational logic circuit design, adder, subtractor, BCD adder, encoder, decoder, BCD to 7-segment decoder, multiplexer, demultiplexer.
- Unit-5 Sequential Circuits:** Latches, Flip-flops - SR, JK, D, T, and Master-Slave Characteristic table and equation, counters and their design, Synchronous counters– Synchronous Up/Down counters – Programmable counters – State table and state transition diagram ,sequential circuits design methodology. Registers –shift registers.

B.Tech. (CS)

Course Outcomes:

At the end of the course, the student will be able to:

CO1	Understand working of logic families and logic gates.
CO2	Use Combinational and Sequential logic circuits.
CO3	Discuss Classification and characteristics of memories
CO4	Understand the process of Analog to Digital conversion and Digital to Analog Conversion
CO5	Use PLDs to implement the given logical problem

Course Delivery methods

BTCSPCC 304: Data Structures and Algorithms

Course objectives:

- To impart the basic concepts of data structures and algorithms.
- To understand concepts about searching and sorting techniques.
- To understand basic concepts about stacks, queues, lists, trees and graphs.
- To understanding about writing algorithms and step by step approach in solving problems with the help of fundamental data structures.

Course Contents:

Unit-1 Stacks: Basic Stack Operations, Representation of a Stack using Static Array and Dynamic Array, Multiple stack implementation using single array, Stack Applications: Reversing list, Factorial Calculation, Infix to postfix Transformation, Evaluating Arithmetic Expressions and Towers of Hanoi.

Unit-2 Queues: Basic Queue Operations, Representation of a Queue using array, Implementation of Queue Operations using Stack, Applications of Queues- Round Robin Algorithm. Circular Queues, De Queue Priority Queues.

Linked Lists: Introduction, single linked list, representation of a linked list in memory, Different Operations on a Single linked list, Reversing single linked list, Advantages and disadvantages of single linked list, circular linked list, double linked list and Header linked list.

Unit-3 Searching Techniques: Sequential and binary search. Sorting Techniques: Basic concepts, Sorting by: bubble sort, Insertion sort, selection sort, quick sort, heap sort; merge sort, radix sort and counting sorting algorithms.

Unit-4 Trees: Definition of tree, Properties of tree, Binary Tree, Representation of Binary trees using arrays and linked lists, Operations on a Binary Tree, Binary Tree Traversals (recursive), Binary search tree, B-tree , B+tree, AVL tree, Threaded binary tree.

Unit-5 Graphs: Basic concepts, Different representations of Graphs, Graph Traversals (BFS & DFS), Minimum Spanning Tree(Prims & Kruskal), Dijkstra's shortest path algorithms. Hashing: Hash function, Address calculation techniques, Common hashing functions, Collision resolution: Linear and Quadratic probing, Double hashing.

B.Tech. (CS)

Course Outcomes:

At the end of the course, the student will be able to:

CO1:	Discuss the algorithms to determine the time and Computation complexity and justify the correctness.
CO2:	Implement given Search problem (Linear Search and Binary Search).
CO3:	Implement Stack and Queue and analyze the same to determine the time and computation complexity.
CO4:	Apply an algorithm Selection Sort, Bubble Sort, Insertion Sort, Quick Sort, Merge Sort, Heap Sort and compare their performance in term of Space and Time complexity.
CO5:	Implement Graph search and traversal algorithms and determine the time and computation complexity.

Course Delivery methods	
CD1	Lecture by use of boards/LCD projectors/OHP projectors

BTCSPCC 305: Internet and Web Technology

Course Objectives:

- To design and develop a dynamic website
- To provide some basic knowledge of web services which are useful for the same

Course Contents:

Unit–I Introduction to Web: what is www, Protocols and programs, application and development tools like Dream Weaver , Gif Animator , the web browser, What is server, Search Engines choices, setting up web servers, Logging users, dynamic IP Web Design: Web site design principles, planning the site and navigation,

Unit–II Introduction to HTML: What HTML is-and What It isn't, History of HTML, Structuring HTML page, The HTML<<HEAD><TITLE><BODY>tags, Paragraphs, Font tags, Creating different types of Links, Introduction to lists, Different types of lists. , Table pats, Sizing tables, borders, cells, Table and cell color and alignment, Aligning your table content, spanning multiple rows and columns, grouping and aligning rows and columns.

Unit–III Scripting: What is the scripting, server side and client side scripting, Javascript : Client side scripting, What is Javascript, How to develop Javascript, simple Javascript, variables, functions, conditions, loops and repetition

Unit–IV DHTML: What is DHTML, The concept of style sheets, Approaches to style sheets, commonly used style sheet properties and values, Controlling page layout CSS properties, Backgrounds, colors and images, setting border appearance Inline style sheets

Unit–V Web Forms: Understanding forms and functions, Essential elements of forms, Displaying control labels, Grouping control with field set and legend, What are frames , Working with linked windows, Working with frames, Changing frame borders

Text Books:

BTCSPCC 306: Software Engineering

Course Objectives:

- To help students to develop skills that will enable them to construct software of high quality– software that is reliable, and that is reasonably easy to understand, modify and maintain.
- To foster an understanding of why these skills are important.

Course Contents:

- Unit-1** Introduction, software life-cycle models, software requirements specification, formal requirements specification, verification and validation.
- Unit-2** Software Project Management: Objectives, Resources and their estimation, LOC and FP estimation, effort estimation, COCOMO estimation model, risk analysis, software project scheduling.
- Unit-3** Requirement Analysis: Requirement analysis tasks, Analysis principles. Software prototyping and specification data dictionary, Finite State Machine (FSM) models. Structured Analysis: Data and control flow diagrams, control and process specification behavioral modeling
- Unit-4** Software Design: Design fundamentals, Effective modular design: Data architectural and procedural design, design documentation.
- Unit-5** Object Oriented Analysis: Object oriented Analysis Modeling, Data modeling. Object Oriented Design: OOD concepts, Class and object relationships, object modularization, Introduction to Unified Modeling Language.

B.Tech. (CS)

Course Outcomes:

At the end of the course, the student will be able to:

CO1:	Understand large scale software development from a broader perspective, and function in multidisciplinary teams.
CO2:	Apply knowledge gained in the course to practical software development situations.
CO3:	Describe software systems to meet desired needs with realistic constraints.
CO4:	Describe software development activities.
CO5:	Discuss contemporary issues in Software development and engage in life-long learning, understand professional and ethical responsibility

BTCSPCC 307: Data Structures and Algorithms Lab

Course Objectives:

- To impart the basic concepts of data structures and algorithms.
- To understand concepts about searching and sorting techniques.
- To understand basic concepts about stacks, queues, lists, trees and graphs.

List of Experiments:

<i>S. No.</i>	<i>List of Exercises</i>
1	Write a program to insert an element at desire position in the array.
2	Write a program to delete an element at desire position from the array.
3	Write a program to replace an element at desire position in the array.
4	Write a program to search (linear search) an element in the array.
5	Write a program to search (binary search) an element in the array.
6	Write a program to addition and multiply of two matrices.
7	Write a program to implementation of stack using array.
8	Write a program to implementation of queue using array.
9	Write a program to implementation link list.
10	Write a program that sorts the array through Bubble sort.
11	Write a program that sorts the array through Quick sort.
12	Write a program that sorts the array through Merge sort.
13	Write a program that sorts the array through Insertion sort.
14	Write a program to BST (binary search tree) addition, deletion and searching.

B.Tech. (CS)

Course Outcomes:

At the end of the course, the student will be able to:

CO1:	Select appropriate data structures as applied to specified problem definition.
CO2:	Implement operations like searching, insertion, and deletion, traversing mechanism etc. on various data structures.
CO3:	Implement Linear and Non-Linear data structures.
CO4:	Implement appropriate sorting/searching technique for given problem.
CO5:	Determine and analyze the complexity of given Algorithms.

Course Delivery methods

BTCSPCC 308: Object Oriented Programming Lab

Course Objective:

- To Perform object oriented programming for develop solutions to problems, demonstrating usage of control structures, modularity, I/O and other standard language constructs.
- To Demonstrate adeptness of object oriented programming in developing solutions to problems demonstrating usage of data abstraction, encapsulation, and inheritance.

List of Experiments:

- 1 Understand the basics of C++ library, variables, and data input-output.
- 2 C++ program using with the concept of structures.
- 3 Implement class and object concepts and function overloading.
- 4 Write programs to understand dynamic memory allocation and array of objects.
- 5 Program to understand different types of constructors and destructor.
6. Implement friend function to access private data of a class and usage of thisPointer.
7. Write programs to understand the usage of constant data member and member function, static data member and member function in a class.
8. Implement different types of inheritance, function overriding and virtual function
9. Implement Operator overloading concepts.
10. Write programs to understand function template and class template.
11. Write programs to understand exception handling techniques.
12. Write programs to understand file handling techniques.

B.Tech. (CS)

Course Outcomes:

At the end of the course, the student will be able to:

CO1:	Apply OOPs features to program design and implementation.
CO2:	Create Classes according to the problem and implement programs in C++
CO3:	Implement Object Oriented Programs using templates and exceptional handling concepts.
CO4:	Perform console operations, applications and file handling.
CO5:	Implement applications using C++.

Course Delivery methods

BTCSPCC 309: Software Engineering Lab

Course Objective:

- To help students to develop skills that will enable them to construct software of high quality software that is reliable and reasonably also easy to understand, modify and maintain.
- To foster an understanding of why these skills are important.

Tool Required: Rational Rose Enterprise Edition

List of Experiments:

1. Development of requirements specification, function oriented design using/SD, object-oriented design using UML, test case design, and implementation using Java and testing. Use of appropriate CASE tools and other tools such as configuration management tools, program analysis tools in the software lifecycle.
2. Develop Software Requirements Specification (SRS) for a given problem in IEEE template.
3. Develop DFD model (level-0, level-1 DFD and Data dictionary) of the project.
4. Develop structured design for the DFD model developed.
5. Developed all Structure UML diagram of the given project.
6. Develop Behavior UML diagram of the given project.

B.Tech. (CS)

Course Outcomes:

At the end of the course, the student will be able to:

CO1	Preparing of software requirements specification for a given problem in IEEE template using UML.
CO2	Use of appropriate CASE tools.
CO3	Implement models for software applications.
CO4	Create DFD's for software applications.
CO5	Use the different UML notations for designing software.

BTCSPCC 310: Digital Electronics Lab

Course Objectives:

- Students will learn and understand the Basics of digital electronics and able to design basic logic circuits, combinational and sequential circuits.

List of Experiments:

1. To verify the truth tables of basic logic gates: AND, OR, NOR, NAND, NOR. Also to verify truth table of Ex-OR, Ex-NOR (For 2, 3, & 4 inputs using gates with 2, 3,& 4 inputs).
2. To verify the truth table of OR, AND, NOR, Ex-OR, Ex-NOR realized using NAND& NOR gates.
3. To realize an SOP and POS expression.
4. To realize Half adder/ Subtractor & Full Adder/ Subtractor using NAND & NOR gates and to verify their truth tables.
5. To realize a 4-bit ripple adder/ Subtractor using basic Half adder/ Subtractor & basic Full Adder/ Subtractor.
6. To verify the truth table of 4-to-1 multiplexer and 1-to-4 demultiplexer. Realizethe multiplexer using basic gates only. Also to construct and 8-to-1 multiplexerand 1-to-8 demultiplexer using blocks of 4-to-1 multiplexer and 1-to-4demultiplexer.
7. Design & Realize a combinational circuit that will accept a 2421 BCD code anddrive a TIL - 312 seven-segment displays.
8. Using basic logic gates, realize the R-S, J-K and D-flip flops with and without clock signal and verify their truth table.
9. Construct a divide by 2, 4& 8 asynchronous counter. Construct a 4-bit binary counter and ring counter for a particular output pattern using D flip flop.
10. Perform input/output operations on parallel in/Parallel out and Serial in/Serial out registers using clock. Also exercise loading only one of multiple values into the register using multiplexer. Note: As far as possible, the experiments shall be performed on bread board. However, experiment Nos. 1-4 is to be performed on bread board only.

B.Tech. (CS)

Course Outcomes:

At the end of the course, the student will be able to:

CO1:	Convert different type of codes and number systems which are used in digital transmission and computer systems.
CO2:	Apply the codes and number systems converting circuits and Compare different types of logic families which are the basic Unit of different types of logic gates in the domain of economy, performance and efficiency.
CO3:	Analyze different types of digital electronic circuit using various mapping and logical tools and know the techniques to prepare the most simplified circuit using various mapping and mathematical methods.
CO4:	Design different types of with and without memory element digital electronic circuits for particular operation, within the real time of economic, performance, efficiency, user friendly and environmental constraints.
CO5:	Assess the nomenclature and technology in the area of various memory devices used and apply the memory devices in different types of digital circuits for real world application.

BTCSPSIT 311: Internet and Web Technology

Course Objective:

- To design web development Software and to understand web technologies.
- To make student able for designing and developing the web applications.

List of Experiments

1. Write a program to display different style of heading text?
2. Develop and demonstrate a HTML document that illustrates the use external style sheet, ordered list, table, borders, padding, color, and the tag
3. Write an html code for creates the ordered list.
4. Web page creation with all types of cascading style sheets.
5. Create a html registration form and to validate the form using JavaScript code.
6. Create a web page that displays college information using various style sheets.
7. To write a JavaScript program to define a user defined function for sorting the values in an array.
8. Create a web page with field username, password, date of birth, email, and gender contact no.
9. Create a webpage to demonstrate the validation.

B.Tech. (CS)

Course Outcomes

At the end of the course, the student will be able to:

CO1:	List various tags in html and use these, apply Cascaded style sheet to create web page the help of HTML and Javascript.
CO2:	Explain usage of web servers and use this to develop webpage and store data in database on Web server.
CO3:	Understand and Install Web server to run the web application.
CO4:	Apply with web forms to develop dynamic web applications using ADO.net.
CO5:	Experiment with web technologies.

BTCSSODECA 312: Social Outreach, Discipline & Extra Curricular Activities

Course Objectives:

- To allowing students to explore strengths and talents outside of academics.
- To helping students develop stronger time-management and organizational skills.
- To giving students the opportunity to build friendships and participate in group activities outside of the tight circle of the regular classroom.
- To helping to build confidence and self-esteem

Course Outcomes:

At the end of the course, the student will be able to:

CO1:	Develop their self-confidence, leadership qualities, and their responsibilities towards the community.
CO2:	Have an impact on academic development, personal development, and civic responsibility
CO3:	Understand the value of Social Work.
CO4:	Understand the Significance of Discipline in student's Life
CO5:	Contribute towards in social up-gradation by social organization like, Art of Living, Yoga etc., Blood donation, Awareness programs, personality development programs,

BTBSC313: ANANDAM

Objectives:

- To instill the joy of giving in young people, turning them into responsible citizens to build up a better society.
- To inculcate the habit of service in students across the University.
- A compulsory course of 2 credits per semester to be included in each program of University.
- Students to be expected to engage in individual and group acts of service and goodness.

Action Plan:

Students will be expected to

- Do at least one act of individual service each day
- Record this act of service in a dedicated Register / Personal Diary
- Share this Register / Personal Diary day in the Anandam Class scheduled per week. The class interaction will include Personal Diary check, Showing of Community based motivation videos, Community based presentations by students, Role playing etc.
- Undertake one group service project for 64 hours every semester (outside college hours)
- Upload the report on the group project on the Anandam platform
- Participate in a sharing and presentation on the group service in the discussion sessions held once in week
- There will be some suggested projects and organizations that students can work with. Students can also suggest their own projects which others can join

Each student will finish the year with a portfolio of giving. This will include their Register / Personal Diaries and their reports on group service projects.

BTCSBSC 401: Probability and Queuing Theory

Course Objective:

- To learn basics of probability in connection with discrete and continuous instances along with real world phenomenon of standard distributions.
- To understand and apply two dimensional random variables and markov process.
- To understand the queuing models at the end of the course.
- To understand and apply the sampling theory.

Course Content:

Unit-I: Probability and Random Variables: Introduction to probability, Axioms of probability - Conditional probability - Total probability – Baye’s theorem Random variable - Probability mass function - Probability density function - Properties – Moments - Moment generating functions and their properties.

Unit-II: Standard Distributions and Two Dimensional Random Variables: Binomial, Poisson, Geometric, Uniform, Exponential, Weibull and Normal distributions and their properties. Joint distributions - Marginal and conditional distributions – Covariance – Correlation and regression - Transformation of random variables - Central limit theorem

Unit-III: Sampling Theory: Hypothesis testing, Test of significance, t- test, Chi square test and F- test.

Unit-IV: Random Processes and Markov Chains: Classification - Stationary process - Markov process - Poisson process - Birth and death process - Markov chains - Transition probabilities - Limiting distributions. Transition Diagram.

Unit-V: Queuing Theory: Markovian models – M/M/1, M/M/C, finite and infinite capacity - M/M/∞ queues - Finite source model - M/G/1 queue (steady state solutions only) – Pollaczek – Khintchine formula. Tools for statistical analysis.

8. S. Narayanan, T. K. Manicavachagom Pillay, G. Ramanaiah, *Advanced mathematics for engineering students*, S. Viswanathan Pvt. Ltd., 1985.

B.Tech. (CS)

Course Outcomes:

At the end of the course, the student will be able to:

CO1:	Explain the basic perceptions of probability of an event and associated random variables.
CO2:	Compare and contrast various standard distributions with suitable statistical analysis. Apply and solve two dimensional random variable problems through joint distributions and central limit theorem
CO3:	Use the sampling theory to determine the significance of the differences.
CO4:	Analyze probabilistic environment using random process and markov chain techniques.
CO5:	Build and implement queuing model associated to stochastic process.

BTC SHSMC 402: Technical Communication

Course Objectives: -

- To understand the characteristics of technical writing
- To understand complex engineering ideas for targeted audiences.
- To understand the advance technical writing in professional documents.
- To write effective technical and business documents that are grammatically and stylistically correct

Course Contents:

Unit I Introduction to Technical Communication- Definition of technical communication, Aspects of technical communication, forms of technical communication, importance of technical communication, technical communication skills (Listening, speaking, writing, reading writing), linguistic ability, style in technical communication.

Unit II Comprehension of Technical Materials/Texts and Information Design & development- Reading of technical texts, Reading and comprehending instructions and technical manuals, Interpreting and summarizing technical texts, Note-making. Introduction of different kinds of technical documents, Information collection, factors affecting information and document design, Strategies for organization, Information design and writing for print and online media.

Unit III Technical Writing, Grammar and Editing- Technical writing process, forms of technical discourse, Writing, drafts and revising, Basics of grammar, common error in writing and speaking, Study of advanced grammar, Editing strategies to achieve appropriate technical style, Introduction to advanced technical communication. Planning, drafting and writing Official Notes, Letters, E-mail, Resume, Job Application, Minutes of Meetings.

Unit IV Technical Reports, types of technical reports, Characteristics and formats and structure of technical reports. Technical Project Proposals, types of technical proposals,

Unit V Advanced Technical Writing- Characteristics and formats and structure of technical proposals. Technical Articles, types of technical articles, Writing strategies, structure and formats of technical articles.

B.Tech. (CS)

Course Outcomes:

At the end of the course, the student will be able to:

CO1	Define basic communication skills used in technical areas.
CO2	Understand technical materials, texts and information design & development.
CO3	Adapt an effective oral presentation, displaying the ability to engage the audience by employing a suitable delivery style, appropriate language and quality visual aids.
CO4	Explain Technical Reports and its types & features
CO5	Understand the structure and formats of technical articles and proposals

Course Delivery methods	
CD1	Lecture by use of boards/LCD projectors/OHP projectors

BTCSESC 403: Microprocessor & Microcontrollers

Course Objectives:

- To understand the various fundamentals of microprocessor including 16-bit and 32-bit microcontrollers
- To understand the 8085 Architecture and timing diagrams and execution cycles.
- To understand the 8051, 8255 etc. Architecture and timing diagrams and execution cycles.
- To know the Concept of Embedded C concept.

Course Content:

- Unit I:** Introduction to Microprocessors, microcontroller; 8085 Microprocessor Architecture, pin description, Bus concept and organization; concept of multiplexing and demultiplexing of uses; concept of static and dynamic RAM, type of ROM, memory map.
- Unit II:** Software architecture registers and signals, Classification of instruction, Instruction set, addressing modes, Assembly Language Programming and Debugging, Programming Technique, instruction Format and timing. Advance Assembly Language Programming, Counter and time delay; types of Interrupt and their uses, RST instructions and their uses, 8259 programmable interrupt controller; Macros, subroutine; Stack -implementation and uses with examples; Memory interfacing.
- Unit III:** 8085 Microprocessor interfacing:, 8255 Programmable Peripheral Interface, 8254 programmable interval timer, interfacing of Input/output device, 8279 Key board/Display interface.
- Unit IV:** Arduino micro controller: Introduction to embedded system, Microcontroller vs. Microprocessor, Different types of microcontrollers, Introduction to Arduino, Pin configuration and architecture, Concept of digital and analog ports, Introduction to Embedded C and Arduino platform
- Unit V:** Embedded C concept: Arduino data types Variables and constants, Operators, Control Statements, Arrays, Functions, Pins Configured as INPUT, Pins Configured as OUTPUT, pin Mode, Function, digital Write Function, analog Read function. Interfacing of different sensors

B.Tech. (CS)

Course Outcomes:

At the end of the course, the student will be able to:

CO1:	Understand the architecture of microprocessor and concept of microcontroller.
CO2:	Know Concept of assembly language programming.
CO3:	Know Concept of interfacing design of peripherals like I/O, A/D, D/A, timer, counter and memory devices etc.
CO4:	Understand the architecture of Arduinomicrocontroller.
CO5:	Know Concept of Embedded C concept.

BTCSPCC 404: Database Management System

Course objectives:

- To understand the different issues involved in the design and implementation of a database system.
- To study the physical and logical database designs, database modeling, relational, hierarchical, and network models
- To understand and use data manipulation language to query, update, and manage a Database
- To develop an understanding of essential DBMS concepts such as: database security, integrity, concurrency, distributed database, and intelligent database, Client/Server (Database Server), Data Warehousing.
- To design and build a simple database system and demonstrate competence with the fundamental tasks involved with modeling, designing, and implementing a DBMS.

Course Contents:

Unit I: Introduction: Overview and History of DBMS. File System v/s DBMS. Advantage of DBMS Describing and Storing Data in a DBMS. Queries in DBMS. Structure of a DBMS.

Unit II: Introduction to database systems: Entity Relationship model: Overview of Data Design Entities, Attributes and Entity Sets, Relationship and Relationship Sets. Features of the ER Model- Key Constraints, Participation Constraints, Weak Entities, Class Hierarchies, Aggregation, Conceptual Data Base, and Design with ER Model- Entity v/s Attribute Entity vs Relationship Binary vs Ternary Relationship and Aggregation v/s ternary Relationship Conceptual Design for a Large Enterprise.

Unit III: Relationship Algebra and Calculus: Relationship Algebra Selection and Projection, Set Operations, Renaming, Joins, Division, Relation Calculus, Expressive Power of Algebra and Calculus.

SQL queries programming and Triggers: The Forms of a Basic SQL Query, Union, and Intersection and Except, Nested Queries, Correlated Nested Queries, Set-Comparison Operations, Aggregate Operators, Null Values and Embedded SQL, Dynamic SQL, ODBC and JDBC, Triggers and Active Databases.

Unit IV: Schema refinement and Normal forms: Introductions to Schema Refinement, Functional Dependencies, Boyce - Codd Normal Forms, Third Normal Form, Normalization-Decomposition into BCNF Decomposition into 3-NF.

Unit V: Transaction Processing: Introduction-Transaction State, Transaction properties, Concurrent Executions. Need of Serializability, Conflict vs. View Serializability, Testing for Serializability, Recoverable Schedules, Cascadeless Schedules.

Concurrency Control: Implementation of Concurrency: Lock-based protocols, Timestamp-based protocols, Validation-based protocols, Deadlock handling, Database Failure and Recovery: Database Failures, Recovery Schemes: Shadow Paging and Log-based Recovery, Recovery with Concurrent transactions.

B.Tech. (CS)

Course Outcomes:

At the end of the course, the student will be able to:

CO1:	Describe given query write relational algebra expressions for that query and optimize the developed expressions
CO2:	Understand given specification of the requirement design the databases using E-R method and normalization.
CO3:	Understand given specification construct the SQL queries for Open source and Commercial DBMS -MYSQL, ORACLE, and DB2.
CO4:	Demonstrate given query optimize its execution using Query optimization algorithms
CO5:	Discuss a given transaction-processing system; determine the transaction atomicity, consistency, isolation, and durability.

BTCSPCC 405: Theory of Computation

Course Objectives:

- To Develop a formal notation for strings, languages and machines.
- To Design finite automata to accept a set of strings of a language.
- To Prove that a given language is regular and apply the closure properties of languages.
- To Design context free grammars to generate strings from a context free language and convert them into normal forms.
- To Prove equivalence of languages accepted by Push Down Automata and languages generated by context free grammars
- To Identify the hierarchy of formal languages, grammars and machines.
- To Distinguish between computability and non-computability and Decidability and un-decidability.

Course Contents:

Unit I: Introduction: Basic machine, Finite state machine, Transition graph, Transition matrix, Deterministic and nondeterministic finite automation, Equivalence of DFA and N DFA, Decision properties, minimization of finite automata, Mealy & Moore machines.

Unit II: Finite Automata & Regular Expression: Alphabet, words, Operations, Regular sets, relationship and conversion between Finite automata and regular expression and vice versa, designing regular expressions, closure properties of regular sets, Pumping lemma and regular sets, Myhill- Nerode theorem , Application of pumping lemma, Power of the languages.

Unit III: Context Free Grammars (CFG), Derivations and Languages, Relationship between derivation and derivation trees, leftmost and rightmost derivation, sentential forms, parsing and ambiguity, simplification of CFG, normal forms, Greibach and Chomsky Normal form , Problems related to CNF and GNF including membership problem.

Unit IV: Nondeterministic PDA, Definitions, PDA and CFL, CFG for PDA, Deterministic PDA, and Deterministic PDA and Deterministic CFL , The pumping lemma for CFL's, Closure Properties and Decision properties for CFL, Deciding properties of CFL.

Unit V: Turing Machines: Introduction, Definition of Turing Machine, TM as language Acceptors and Transducers, Computable Languages and functions, Universal TM & Other modification, multiple tracks Turing Machine.

Hierarchy of Formal languages: Recursive & recursively enumerable languages, Properties of RL and REL, Introduction of Context sensitive grammars and languages, The Chomsky Hierarchy.

Tractable and Untractable Problems: P, NP, NP complete and NP hard problems, Un-decidability, examples of these problems like vertex cover problem, Hamiltonian path problem, traveling sales man problem.

B.Tech. (CS)

Course Outcomes:

At the end of the course, the student will be able to:

CO1:	Calculate formal notation for strings, languages and machines.
CO2:	Apply finite automata to accept a set of strings of a language.
CO3:	Understand language determine whether the given language is regular or not.
CO4:	Describe context free grammars to generate strings of context free language.
CO5:	Practice equivalence of languages accepted by Push Down Automata and languages generated by context free grammars

BTCSPCC 406: Data Communication and Computer Networks

Course objectives:

- To Understand about the evolution of data communication and networking paradigms
- To Understand the principles of data communication, channel characteristics, signaling, modulation and encoding, and multiplexing (SONET/SDH)
- To know about the various transmission media, their comparative study.
- To Understand about the channel error detection and correction, MAC protocols, Ethernet and WLAN
- To understand the operations of TCP/UDP, FTP, HTTP, SMTP, SNMP, etc.

Course Contents:

Unit I: Network hardware, Network software, topologies, Protocols and standards, OSI model, TCP model, TCP/IP model

Unit II: Physical Layer: Digital and Analog Signals, Periodic Analog Signals, Signal Transmission, Limitations of Data Rate, Digital Data Transmission, Performance Measures, Line Coding, Digital Modulation, Media and Digital Transmission System.

Unit III: Data Link Layer: Error Detection and Correction, Types of Errors, Two dimensional parity check, Detection verses correction, Block Coding, Linear Block Coding, Cyclic Codes, Checksum, Standardized Polynomial Code, Error Correction Methods, Forward Error Correction, Protocols: Stop and wait, Go-back-N ARQ, Selective Repeat ARQ, Sliding window, Piggy backing, Pure ALOHA, Slotted ALOHA, CSMA/CD, CSMA/CA.

Unit IV: Network Layer: Design issues, Routing algorithms: IPV4, IPV6, Address mapping: ARQ, RARQ, Congestion control, Unicast, Multicast, Broadcast routing protocols, Quality of Service, Internetworking.

Unit V: Transport Layer: Transport service, Elements of transport protocols, User Datagram Protocol, Transmission Control Protocol, and Quality of service, Leaky Bucket and Token Bucket algorithm.

Application Layer: WWW, DNS, Multimedia, Electronic mail, FTP, HTTP, SMTP, Introduction to network security

2. Data Communications and Networking; B.A. Forouzon, Tata-McGraw-Hill
3. Computer Networks; A.S. Tannenbaum
4. Communication Networks; Garcia and Widija, Tata-McGraw-Hill.

B.Tech. (CS)

Course Outcomes:

At the end of the course, the student will be able to:

CO1:	Explain the functions of the different layer of the OSI Protocol.
CO2:	Draw the functional block diagram of wide-area networks (WANs), local area networks (LANs) and Wireless LANs (WLANs) describe the function of each block.
CO3:	Calculate requirement (small scale) of wide-area networks (WANs), local area networks (LANs) and Wireless LANs (WLANs) design it based on the market available component
CO4:	Calculate problem related TCP/IP protocol developed the network programming.
CO5:	Discuss DNS DDNS, TELNET, EMAIL, File Transfer Protocol (FTP), WWW, HTTP, SNMP, Bluetooth, Firewalls using open source available software and tools.

Course Delivery methods

BTCSPCC 407: Microprocessor & Microcontroller Lab

Course objectives:

- To expose students for operation of typical microprocessor (8085) trainer kit.
- To prepare the students to solve different problems by developing different Programs.
- To develop the quality of assessing and analyzing the obtained data.

List of Experiments:

1. Write a program to add two 8 bit nos and store the result in 7500H memory locations.
2. Write a Program to Multiply two 8 bit data store the result in particular memory location
3. Write a Program to Transfer a block of data from memory location XX00 to another memory location XX00 in forward & reverse order.
4. Write a program to interface LED With Arduino microcontroller (on Proteus simulator and Hardware).
5. Write a program to interface LDR sensor With Arduino microcontroller (on Proteus simulator and Hardware)
6. Write a program to interface LCD (16x2) With Arduino microcontroller (on Proteus simulator and Hardware)
7. Write a program to interface DC Motor With Arduino microcontroller (on Proteus simulator and Hardware)
8. Write a program to interface IR sensor With Arduino microcontroller (on Proteus simulator and Hardware)
9. Write a program to interface Ultrasonic sensor With Arduino microcontroller (on Proteus simulator and Hardware)
10. Write a program to interface PIR sensor With Arduino microcontroller (on Proteus simulator and Hardwa

B.Tech. (CS)

Course Outcomes:

At the end of the course, the student will be able to:

CO1:	Identify relevant information to supplement to the Microprocessor and Microcontroller course.
CO2:	Understand strategies and select proper mnemonics and run their program on the training boards.
CO3:	Understand and Practice different types of programming keeping in mind technical issues and evaluate possible causes of discrepancy in practical experimental observations in comparison.
CO4:	Develop testing and experimental procedures Microcontroller analyze their operation under different cases.
CO5:	Prepare professional quality textual and computational results, incorporating accepted data analysis and synthesis methods, simulation software, and word-processing tools.

BTCSPCC 408: Database Management System Lab

Course objectives:

- To Understand Tables with necessary constraints ,keys and data types, Inserting data and manipulating data as per needs
- To Understand SQL Queries to retrieve required information from single/multiple tables , Creating views and manipulating them as needed
- To Implementing Operations on relations (tables) using PL/SQL
- To Writing triggers for implementing automatic operations and implementing constraints

List of Experiments:

1. Design a Database and create required tables. For e.g. Bank, College Database
2. Apply the constraints like Primary Key, Foreign key, NOT NULL to the tables.
3. Write a SQL statement for implementing ALTER, UPDATE and DELETE.
4. Write the queries to implement the joins.
5. Write the query for implementing the following functions: MAX (), MIN (), AVG () and COUNT () .
6. Write the query to implement the concept of Integrity constrains.
7. Write the query to create the views.
8. Perform the queries for triggers.
9. Perform the following operation for demonstrating the insertion , updation and deletion
10. Using the referential integrity constraints.
11. Write the query for creating the users and their role.

B.Tech. (CS)

Course Outcomes:

At the end of the course, the student will be able to:

CO1:	Describe a Database without anomalies as per requirements
CO2:	Practice complex queries to retrieve required information from database
CO3:	Understand SQL for generating necessary reports.
CO4:	Practice procedures and functions for required database tasks.
CO5:	Demonstrate assertions to implement integrity constraints on multiple tables

Course Delivery methods	
CD1	Lecture by use of boards/LCD projectors/OHP projectors
CD2	Tutorials/Assignments
CD3	Seminars
CD4	Self- learning advice using internets
CD5	Industrial visit

BTCSPCC 409: Network Programming Lab

Course Objectives:

- To introduce Network related commands and configuration files in Linux Operating System.
- To introduce tools for Network Traffic Analysis and Network Monitoring
- To practice Network Programming using Linux System Calls.
- To design and deploy Computer Networks.

List of Experiments:

1. Study of Different Type of LAN& Network Equipments.
2. Study and Verification of standard Network topologies i.e. Star, Bus, Ring etc.
3. LAN installations and Configurations.
4. Write a program to implement various types of error correcting techniques.
5. Write a program to implement various types of framing methods.
6. Write two programs in C: hello_client and hello_server
 - a. The server listens for, and accepts, a single TCP connection; it reads all the data it can from that connection, and prints it to the screen; then it Closes the connection
 - b. The client connects to the server, sends the string “Hello, world!”, then closes the connection 7.
7. Write an Echo_Client and Echo_server using TCP to estimate the round trip time from client to the server. The server should be such that it can accept multiple connections at any given time.
8. Repeat Exercises 6 & 7 for UDP.
9. Repeat Exercise 7 with multiplexed I/O operations.
10. Simulate Bellman -Ford Routing algorithm in NS2

B.Tech. (CS)

Course Outcomes:

At the end of the course, the student will be able to:

CO1:	Apply knowledge of different techniques of error detection and correction to detect and solve error bit during data transmission.
CO2:	Understand and building the skills of routing mechanisms.
CO3:	Explain how a collision occurs and how to solve it.
CO4:	Explain familiar with network tools and network programming.
CO5:	Adapt with the basic protocols of computer networks, and how they can be used to assist in network design and implementation.

BTCSPCC 410: Linux Shell Programming Lab

Course Objectives:

- Study the basic and administration concepts in Linux

List of Experiments:

1. Use of Basic Unix Shell Commands: ls, mkdir, rmdir, cd, cat, banner, touch, file, wc, sort, cut, grep, dd, dfspace, du, ulimit.
2. Commands related to inode, I/O redirection and piping, process control commands, mails.
3. Shell Programming: Shell script based on control structure -If-then-fi, if-then-else-if, nested if -else, to find:
 - 3.1 Greatest among three numbers.
 - 3.2 To find a year is leap year or not.
 - 3.3 To input angles of a triangle and find out whether it is valid triangle or not.
 - 3.4 To check whether a character is alphabet, digit or special character.
 - 3.5 To calculate profit or loss.
4. Shell Programming Looping-while, until, for loops
 - 4.1 Write a shell script to print all even and odd number from 1 to 10.
 - 4.2 Write a shell script to print table of a given number
 - 4.3 Write a shell script to calculate factorial of a given number.
 - 4.4 Write a shell script to print sum of all even numbers from 1 to 10.
 - 4.5 Write a shell script to print sum of digit of any number.
5. Shell Programming - case structure, use of break
 - 5.1 Write a shell script to make a basic calculator which performs addition, subtraction, Multiplication, division
 - 5.2 Write a shell script to print days of a week.
 - 5.3 Write a shell script to print starting 4 months having 31 days.
6. Shell Programming -Functions
 - 6.1 Write a shell script to find a number is Armstrong or not.
 - 6.2 Write a shell script to find a number is palindrome or not.
 - 6.3 Write a shell script to print Fibonacci series.
 - 6.4 Write a shell script to find prime number.
 - 6.5 Write a shell script to convert binary to decimal and decimal to binary
7. Write a shell script to print different shapes -Diamond, triangle, square, rectangle, hollow square etc.
8. Shell Programming –Arrays
 - 8.1 Write a C program to read and print elements of array.
 - 8.2 Write a C program to find sum of all array elements.
 - 8.3 Write a C program to find reverse of an array.
 - 8.4 Write a C program to search an element in an array.
 - 8.5 Write a C program to sort array elements in ascending or descending order.

B.Tech. (CS)

Course Outcomes:

At the end of the course, the student will be able to:

CO1:	Experiment students able to implement CPU scheduling algorithms and Bankers algorithm used for deadlock avoidance and prevention.
CO2:	Implement page replacement and memory management algorithms.
CO3:	Apply UNIX/LINUX operating system commands.
CO4:	Understand different UNIX/LINUX shell scripts and execute various shell programs.
CO5:	Implement virtualization by installing Virtual Machine software.

BTCSPCC 411 : Java Lab

Course Objectives:

- To understand Java concepts and basic characteristics of Java
- To know the principles of packages, inheritance and interfaces
- To define exceptions and use I/O streams
- To develop a java application with threads and generics classes

List of Experiments:

1. Develop an in depth understanding of programming in Java: data types, variables, operators, operator precedence, Decision and control statements, arrays, switch statement, Iteration Statements, Jump Statements, Using break, Using continue, return.
2. Write Object Oriented programs in Java: Objects, Classes constructors, returning and passing objects as parameter, Inheritance, Access Control, Using super, final with inheritance Overloading and overriding methods, Abstract classes, Extended classes.
3. Develop understanding to developing packages & Interfaces in Java: Package, concept of CLASSPATH, access modifiers, importing package, Defining and implementing interfaces.
4. Develop understanding to developing Strings and exception handling: String constructors, special string operations, character extraction, searching and comparing strings, string Buffer class. Exception handling fundamentals, Exception types, uncaught exceptions, try, catch and multiple catch statements. Usage of throw, throws and finally.
5. Develop applications involving file handling: I/O streams, File I/O.
6. Develop applications involving concurrency: Processes and Threads, Thread Objects, Defining and Starting a Thread, Pausing Execution with Sleep, Interrupts, Joins, and Synchronization.
7. Programs to demonstrate basic concepts e.g. operators, classes, constructors, control & iteration statements, recursion etc. such as complex arithmetic, matrix arithmetic, tower of Hanoi problem etc.
8. Development of programs/projects to demonstrate concepts like inheritance, exception handling, packages, interfaces etc. such as application for electricity department, library management, ticket reservation system, payroll system etc.
9. Development of a project to demonstrate various file handling concepts.
10. Develop applications involving Applet: Applet Fundamentals, using paint method and drawing polygons. It is expected that each laboratory assignments to given to the students with an aim to In order to achieve the above objectives.

B.Tech. (CS)

Course Outcomes:

At the end of the course, the student will be able to:

CO1:	Understand the features of Java and to use the Java SDK environment to create, debug and run simple Java programs.
CO2:	Use the syntax and semantics of java programming language and basic concepts of Java.
CO3:	Experiment reusable programs using the concepts of inheritance, polymorphism, interfaces and packages
CO4:	Apply the concepts of Multithreading and Exception handling to develop efficient and error free codes.
CO5:	Design event driven GUI and web related applications which mimic the real word scenarios

Course Delivery methods	
CD1	Lecture by use of boards/LCD projectors/OHP projectors
CD2	Tutorials/Assignments
CD3	Seminars
CD4	Self- learning advice using internets
CD5	Industrial visit

TCSSODECA 412: Social Outreach, Discipline & Extra Curricular Activities**Course Objectives:**

- To allowing students to explore strengths and talents outside of academics.
- To helping students develop stronger time-management and organizational skills.
- To giving students the opportunity to build friendships and participate in group activities outside of the tight circle of the regular classroom.
- To helping to build confidence and self-esteem

Course Outcomes:

At the end of the course, the student will be able to:

CO1:	Develop their self-confidence, leadership qualities, and their responsibilities towards the community.
CO2:	Have an impact on academic development, personal development, and civic responsibility
CO3:	Understand the value of Social Work.
CO4:	Understand the Significance of Discipline in student's Life
CO5:	Contribute towards in social up-gradation by social organization like, Art of Living, Yoga etc., Blood donation, Awareness programs, personality development programs,

BTBSC413: ANANDAM

Objectives:

- To instil the joy of giving in young people, turning them into responsible citizens to build up a better society.
- To inculcate the habit of service in students across the University.
- A compulsory course of 2 credits per semester to be included in each program of University.
- Students to be expected to engage in individual and group acts of service and goodness.

Action Plan:

Students will be expected to

- Do at least one act of individual service each day
- Record this act of service in a dedicated Register / Personal Diary
- Share this Register / Personal Diary day in the Anandam Class scheduled per week. The class interaction will include Personal Diary check, Showing of Community based motivation videos, Community based presentations by students, Role playing etc.
- Undertake one group service project for 64 hours every semester (outside college hours)
- Upload the report on the group project on the Anandam platform
- Participate in a sharing and presentation on the group service in the discussion sessions held once in week
- There will be some suggested projects and organizations that students can work with. Students can also suggest their own projects which others can join

Each student will finish the year with a portfolio of giving. This will include their Register / Personal Diaries and their reports on group service projects.

BTCSESC 501: Information Theory & Coding

Course Objective:

- To study how information is measured in terms of probability and entropy, and the relationships among conditional and joint entropies.
- To study coding schemes, including error correcting codes.

Course Contents:

Unit I: Introduction to information theory: Uncertainty, Information and Entropy, Information measures for continuous random variables, source coding theorem. Discrete Memory less channels, Mutual information, Conditional entropy.

Unit II: Source coding schemes for data compaction: Prefix code, Huffman code, Shanon - Fane code & Hempel-Ziv coding channel capacity. Channel coding theorem. Shannon limit.

Unit III: Linear Block Code: Introduction to error connecting codes, coding & decoding of linear block code, minimum distance consideration, conversion of non-systematic form of matrices into systematic form.

Unit IV: Cyclic Code: Code Algebra, Basic properties of Galois fields (GF) polynomial operations over Galois fields, generating cyclic code by generating polynomial, parity check polynomial. Encoder & decoder for cyclic codes.

Unit V: Convolutional Code: Convolutional encoders of different rates. Code Tree, Trllis and state diagram. Maximum likelihood decoding of convolutional code: The viterbi Algorithm fee distance of a convolutional code.

Text/Reference Books:

- K. Sam Shanmugam-"Digital and Analog Communication System", John Wiley Sons.
- Herbor Taub Donald Schilling- "Principal of Communication System". Tata Mc-Graw Hill.

B.Tech. (CS)

Course Outcomes

At the end of the course, a student will be able to:

CO1:	Understand the channel performance using Information theory.
CO2:	Discuss various error control code properties
CO3:	Describe linear block codes for error detection and correction
CO4:	Apply convolution codes for performance analysis & cyclic codes for error detection and correction.
CO5:	Practice BCH & RS codes for Channel performance improvement against burst errors.

Course Delivery methods	
CD1	Lecture by use of boards/LCD projectors/OHP projectors
CD2	Tutorials/Assignments
CD3	Seminars
CD4	Self- learning advice using internets

BTCSPCC 502: Compiler Design

Course Objective:

- To understand and list the different stages in the process of compilation.
- To identify different methods of lexical analysis
- To design top-down and bottom-up parsers
- To identify synthesized and inherited attributes
- To develop syntax directed translation schemes
- To develop algorithms to generate code for a target machine

Course Contents:

Unit I: Introduction: Objective, scope and outcome of the course. Compiler, Translator, Interpreter definition, Phase of compiler, Bootstrapping, Review of Finite automata lexical analyzer, Input, Recognition of tokens, Idea about LEX: A lexical analyzer generator, Error handling.

Unit II : Review of CFG Ambiguity of grammars: Introduction to parsing. Top down parsing, LL grammars & passers error handling of LL parser, Recursive descent parsing predictive parsers, Bottom up parsing, Shift reduce parsing, LR parsers, Construction of SLR, Conical LR & LALR parsing tables, parsing with ambiguous grammar. Operator precedence parsing, Introduction of automatic parser generator: YACC error handling in LR parsers.

Unit III: Syntax directed definitions; Construction of syntax trees, S Attributed Definition, L-attributed definitions, Top down translation. Intermediate code forms using postfix notation, DAG, Three address code, TAC for various control structures, Representing TAC using triples and quadruples, Boolean expression and control structures.

Unit IV: Storage organization; Storage allocation, Strategies, Activation records, Accessing local and non-local names in a block structured language, Parameters passing, Symbol table organization, Data structures used in symbol tables.

Unit V: Definition of basic block control flow graphs; DAG representation of basic block, Advantages of DAG, Sources of optimization, Loop optimization, Idea about global data flow analysis, Loop invariant computation, Peephole optimization, Issues in design of code generator, A simple code generator, Code generation from DAG.

Text/Reference Books:

- 'Compilers Principles, Techniques and Tools', Aho, Pearson Education.
- 'Modern Compiler Design', Gallies, Pearson Education.
- 'The Essence of Compilers', Hunter, Pearson Education

B.Tech. (CS)

Course Outcomes

At the end of the course, the student will be able to:

CO1:	Understand grammar specification to develop the lexical analyzer
CO2:	Understand parser specification design top-down and bottom-up Parsers
CO3:	Practice syntax directed translation schemes
CO4:	Apply algorithms to generate code for a target machine
CO5:	Understand DAG representation

BTCSPCC 503: Operating System

Course Objective:

- To learn the mechanisms of Operating System to handle processes and threads.
- To learn the mechanisms involved in memory management in OS.
- To gain knowledge on distributed operating system concepts that includes architecture, Mutual exclusion algorithms, deadlock detection algorithms and agreement protocols
- To know the components and management aspects

Course Contents:

Unit I: Introduction and History of Operating systems: Structure and operations; processes and files Processor management: inter process communication, mutual exclusion, semaphores, wait and signal procedures, process scheduling and algorithms, critical sections, threads, multithreading

Unit II: Memory management: contiguous memory allocation, virtual memory, paging, page table structure, demand paging, page replacement policies, thrashing, segmentation, case study

Unit III: Deadlock: Shared resources, resource allocation and scheduling, resource graph models, deadlock detection, deadlock avoidance, deadlock prevention algorithms.
Device management: devices and their characteristics, device drivers, device handling, disk scheduling algorithms and policies

Unit IV: File management: file concept, types and structures, directory structure, cases studies, access methods and matrices, file security, user authentication

Unit V: UNIX and Linux operating systems as case studies; Time OS and case studies of Mobile OS

Text/Reference Books:

- Operating System Concepts Essentials, 9th Edition by AviSilberschatz, Peter Galvin, Greg Gagne, Wiley Asia Student Edition.
- Operating Systems: Internals and Design Principles, 5th Edition, William Stallings, Prentice Hall of India.
- Operating System: A Design-oriented Approach, 1st Edition by Charles Crowley, Irwin Publishing
- Operating Systems: A Modern Perspective, 2nd Edition by Gary J. Nutt, Addison-Wesley
- Design of the Unix Operating Systems, 8th Edition by Maurice Bach, Prentice-Hall of India
- Understanding the Linux Kernel, 3rd Edition, Daniel P. Bovet, Marco Cesati, O'Reilly and Associates

B.Tech. (CS)

Course Outcomes

At the end of the course, the student will be able to:

CO1:	Understand the structure of OS and basic architectural components involved in OS design
CO2:	Practice and design the applications to run in parallel either using process or thread models of different OS
CO3:	Discuss the various device and resource management techniques for timesharing and distributed systems
CO4:	Understand the Mutual exclusion, Deadlock detection and agreement protocols of Distributed operating system
CO5:	Understand the concept of time OS and Mobile OS

BTCSPCC 504: Computer Graphics & Multimedia

Course Objective:

- To understand contemporary graphics principles and graphics hardware.
- To introduce comprehensive introduction to computer graphics leading to the ability to understand contemporary terminology, progress, issues, and trends.
- To go thorough introduction to computer graphics techniques, focusing on 3D modeling, image synthesis, and rendering.

Course Contents:

- Unit I:** Basic of Computer Graphics: Basic of Computer Graphics, Applications of computer graphics, Display devices, Random and Raster scan systems, Graphics input devices, Graphics software and standards
- Unit II:** Graphics Primitives Points, lines, circles and ellipses as primitives, scan conversion algorithms for primitives, Fill area primitives including scanline polygon filling, inside-outside test, boundary and flood-fill, character generation, line attributes, area-fill attributes, character attributers. Aliasing and introduction to Anti Aliasing (No anti aliasing algorithm).
- Unit III:** Two Dimensional Graphics: Transformations (translation, rotation, scaling), matrix representation, homogeneous coordinates, composite transformations, reflection and shearing, viewing pipeline and coordinates system, window-to-viewport transformation, clipping including point clipping, line clipping (cohen- sutherland, liang- bersky, NLN), polygon clipping
- Unit IV:** Three Dimensional Graphics:3D display methods, polygon surfaces, tables, equations, meshes, curved lies and surfaces, quadric surfaces, spline representation, cubic spline interpolation methods, Bazier curves and surfaces, B-spline curves and surfaces.3D scaling, rotation and translation, composite transformation, viewing pipeline and coordinates, parallel and perspective transformation, view volume and general (parallel and perspective) projection transformations.
- Unit V:** Illumination and Colour Models: Light sources – basic illumination models – halftone patterns and dithering techniques; Properties of light – Standard primaries and chromaticity diagram; Intuitive colour concepts –RGB colour model – YIQ colour model – CMY colour model – HSV colour model – HLS colour model; Colour selection.

- PrabhatK. Andleigh-Multimedia System Design, Prentice Hall,KiranThaukrar.

B.Tech. (CS)

Course Outcomes

At the end of the course, the student will be able to:

CO1:	List the basic concepts used in computer graphics.
CO2:	Implement various algorithms to scan, convert the basic geometrical primitives, transformations, Area filling, clipping.
CO3:	Describe the importance of viewing and projections.
CO4:	Define the fundamentals of animation, virtual reality and its related technologies.
CO5:	Implement various algorithms for Colour Models and curves

Course Delivery methods

BTCSPCC 505: Analysis of Algorithms

Course Objective:

- To analyze the asymptotic performance of algorithms.
- To write rigorous correctness proofs for algorithms.
- To demonstrate a familiarity with major algorithms and data structures.
- To apply important algorithmic design paradigms and methods of analysis.
- To synthesize efficient algorithms in common engineering design situations.

Course Contents:

Unit I: Background: Review of Algorithm, Complexity Order Notations: definitions and calculating complexity .Divide And Conquer Method: Binary Search, Merge Sort, Quick sort and Strassen's matrix multiplication algorithms.

Unit II: Greedy Method: Knapsack Problem, Job Sequencing, Optimal Merge Patterns and Minimal Spanning Trees. Dynamic Programming: Matrix Chain Multiplication. Longest Common Subsequence and 0/1 Knapsack Problem.

Unit III: Branch And Bound: Traveling Salesman Problem and Lower Bound Theory. Backtracking Algorithms and queens problem. Pattern Matching Algorithms: Naïve and Rabin Karp string matching algorithms, KMP Matcher and Boyer Moore Algorithms.

Unit IV: Assignment Problems: Formulation of Assignment and Quadratic Assignment Problem. Randomized Algorithms- Las Vegas algorithms, Monte Carlo algorithms, randomized algorithm for Min-Cut, randomized algorithm for 2- SAT. Problem definition of Multi-commodity flow, Flow shop scheduling and Network capacity assignment problems.

Unit V: Problem Classes N_p , N_p -Hard And N_p -Complete: Definitions of P, NP-Hard and NP-Complete Problems. Decision Problems.Cook's Theorem.Proving NP Complete Problems - Satisfiability problem and Vertex Cover Problem. Approximation Algorithms for Vertex Cover and Set Cover Problem

Text/Reference Books:

- Design and Analysis of Algorithm; Horowitz and Sahani
- Introduction to Algorithm Design ; Corman
- Design and Analysis of Computer Algorithms ; Aho, Pearson

B.Tech. (CS)

Course Outcomes

At the end of the course, the student will be able to:

CO1:	Describe Algorithms based on asymptotic analysis and justify the correctness of algorithms.
CO2:	Discuss the greedy paradigm and explain when an algorithmic design situation calls for it.
CO3:	Practice the divide-and-conquer paradigm
CO4:	Describe the dynamic-programming paradigm and analyze it to determine its computational complexity.
CO5:	Understand the Problem Classes Np

BTCSPEC 506A: Wireless Communication

COURSE OBJECTIVE:

- To understand the architecture of Wireless Networks.
- To identify the functionalities of layers in architecture.
- To analyze the working of main protocols of all layers.

Course Contents:

- Unit I:** Wireless Channels: Large scale path loss – Path loss models: Free Space and Two-Ray models -Link Budget design – Small scale fading- Parameters of mobile multipath channels – Time dispersion parameters-Coherence bandwidth – Doppler spread & Coherence time, Fading due to Multipath time delay spread – flat fading – frequency selective fading – Fading due to Doppler spread – fast fading – slow fading.
- Unit II:** Cellular Architecture: Multiple Access techniques - FDMA,TDMA, CDMA – Capacity calculations–Cellular concept- Frequency reuse - channel assignment- hand off- interference & system capacity- trunking & grade of service – Coverage and capacity improvement.
- Unit III:** Digital Signaling For Fading Channels: Structure of a wireless communication link, Principles of Offset-QPSK, p/4-DQPSK, Minimum Shift Keying, Gaussian Minimum Shift Keying, Error performance in fading channels, OFDM principle – Cyclic prefix, Windowing, PAPR.
- Unit IV:** Multipath Mitigation Techniques: Equalization – Adaptive equalization, Linear and Non-Linear equalization, Zero forcing and LMS Algorithms. Diversity – Micro and Macro diversity, Diversity combining techniques, Error probability in fading channels with Diversity reception, Rake receiver,
- Unit V:** Multiple Antenna Techniques: MIMO systems – spatial multiplexing -System model -Pre-coding - Beam forming - transmitter diversity, receiver diversity- Channel state information capacity in fading and non-fading channels.

B.Tech. (CS)

Course Outcomes

At the end of the course, the student will be able to:

CO1:	Explain the Classification of mobile communication systems
CO2:	Describe the radio channel characteristics and the cellular principle
CO3:	Show the measures to increase the capacity in GSM systems- sectorization and Spatial Filtering for Interference Reduction
CO4:	Adapt and analyze improved data services in cellular communication.
CO5:	Adapt and analyze the Multiple Antenna Techniques

BTCSPEC 506B: Human Computer Interaction

COURSE OBJECTIVE:-

- To know what the user-centered design cycle and how to practice this approach to design your own website or other interactive software systems
- To critique existing website and other interactive software using guidelines from human factor theories
- To analyze one after another the main features of a GUI: the use of colors, organization and layout of content, filling the interface with useful and relevant information, and communication techniques; and to critique designs in order to provide better solutions

Course Contents:

Unit I: Historical evolution of the field, Interactive system design, Concept of usability - definition and elaboration, HCI and software Engineering, GUI design and Aesthetics, Prototyping techniques.

Model-based Design and evaluation: Basic idea, introduction to different types of models, GOMS family of models (KLM and CMNGOMS), BFitts' law and Hick-Hyman's law, Model-based design case studies,

Unit II: Guidelines in HCI: Shneiderman's eight, golden rules, Norman's seven principles, Norman's model of interaction, Nielsen's ten heuristics with example of its use Heuristic evaluation, Contextual inquiry, Cognitive walkthrough

Unit III: Empirical research methods in HCI: Introduction (motivation, issues, research question formulation techniques), Experiment design and data analysis (with explanation of one-way ANOVA)

Unit IV: Task modeling and analysis: Hierarchical task analysis (HTA), Engineering task models and Concur Task Tree (CTT),I introduction to formalism in dialog design, design using FSM (finite state machines) State charts and (classical) Petri Nets in dialog design

Unit V: Introduction to CA, CA types, relevance of CA in IS design Model, Human Processor (MHP), OOP- Introduction OOM- Object Oriented Modeling of User Interface Design.

Text/Reference Books:

- The essential guide to user interface design, Wilbert O Galitz, Wiley DreamaTech.
- Designing the user interface. 3rd Edition Ben Shneidermann , Pearson Education Asia.
- Human – Computer Interaction. ALAN DIX, JANET FINCAY, GRE GORYD, ABOWD, RUSSELL BEALG, PEARSON.
- Interaction Design PRECE, ROGERS, SHARPS. Wiley Dreamtech, 3. User Interface Design, SorenLauesen , Pearson Education.

B.Tech. (CS)

Course Outcomes

At the end of the course, the student will be able to:

CO1:	Describe what interaction design is and how it relates to human computer interaction and other fields.
CO2:	Describe the social mechanisms that are used by people to communicate and collaborate.
CO3:	Calculate the nature of user frustration and how to reduce it.
CO4:	Describe how technologies can be designed to change people's attitudes and behavior.
CO5:	Understand the CA and IS design

Course Delivery methods

CD1	Lecture by use of boards/LCD projectors/OHP projectors
CD2	Tutorials/Assignments
CD3	Seminars
CD4	Self- learning advice using internets
CD5	Industrial visit

BTCSPEC 506C: Bioinformatics

Course Objectives:

- To use bioinformatics in your own work.
- To Build a solid foundation and acquire the vocabulary you need to supervise or to communicate with others who use these tools.

Course Contents:

Unit I: Introduction: Basics of biology.

Unit II Sequences: Problem Statement, Edit distance and substitution matrices, HMMs and pairwise HMMs, Global and local alignments, Spliced alignment, Space-efficient sequence alignment, multiple alignment, Database searching tools, Sequence by hybridization, Profile HMMs

Unit III: Structures: Protein structure alignment, Protein structure prediction

Unit IV: Phylogenetic trees: Large parsimony and small parsimony problems, Probabilistic approaches, Grammar-based approaches

Unit V: Miscellaneous topics: Pathways and networks, Microarrays, Biomedical images

Text/Reference Books:

- Ghosh Z. and Bibekanand M. (2008) Bioinformatics: Principles and Applications. Oxford University Press.
- Pevsner J. (2009) Bioinformatics and Functional Genomics. II Edition. Wiley-Blackwell.
- Campbell A. M., Heyer L. J. (2006)
- Discovering Genomics, Proteomics and Bioinformatics. II Edition. Benjamin Cummings.

B.Tech. (CS)

Course Outcomes

At the end of the course, a student will be able to:

CO1:	Describe the basic concepts of Bioinformatics and its significance in Biological data analysis.
CO2:	Describe the history, scope and importance of Bioinformatics and role of internet in Bioinformatics.
CO3:	Explain about the methods to characterize and manage the different types of Biological data.
CO4 :	Define different types of Biological Databases.
CO5 :	Discuss basics of sequence alignment and analysis.

Course Delivery methods

BTBSC507: Professional Skills

Objectives:

- To acquire career skills and fully pursue to partake in a successful career path
- To prepare good resume, prepare for interviews and group discussions
- To explore desired career opportunities in the employment market in consideration of an individual SWOT.
- Understand the significance of Team Skills and help them in acquiring them
- To help them design, develop and adapt to situations as an individual and as a team.

Course Contents

Unit I: Resume Skills & Interview Skills

Resume Skills : Preparation and Presentation, Introduction of resume and its importance, Difference between a CV, Resume and Bio data, Essential components of a good resume, Resume skills : common errors, Common errors people generally make in preparing their resume, Prepare a good resume of her/his considering all essential components

Interview Skills : Preparation and Presentation, Meaning and types of interview (F2F, telephonic, video, etc.), Dress Code, Background Research, Do's and Don'ts, Situation, Task, Approach and Response (STAR Approach) for facing an interview, Interview procedure (opening, listening skills, closure, etc.), Important questions generally asked in a job interview (open and closed ended questions), Interview Skills : Simulation, Observation of exemplary interviews, Comment critically on simulated interviews, Interview Skills : Common Errors, Discuss the common errors generally candidates make in interview, Demonstrate an ideal interview

Unit II: Group Discussion Skills & Exploring career opportunities

Meaning and methods of Group Discussion, Procedure of Group Discussion, Group Discussion- Simulation, Group Discussion - Common Errors, Knowing yourself – personal characteristics

Knowledge about the world of work, requirements of jobs including self-employment, Sources of career information, Preparing for a career based on their potentials and availability of opportunities

Unit III: Presentation Skills, Trust and Collaboration

Types of presentations, Internal and external presentation, Knowing the purpose, Knowing the audience, Opening and closing a presentation, Using presentation tools, Handling questions, Presentation to heterogenic group, Ways to improve presentation skills over time, Explain the importance of trust in creating a collaborative team, Agree to Disagree and Disagree to Agree – Spirit of Team work, Understanding fear of being judged and strategies to overcome fear

B.Tech. (CS)

Unit IV: Listening as a Team Skill & Brainstorming

Advantages of Effective Listening, Listening as a team member and team leader. Use of active listening strategies to encourage sharing of ideas (full and undivided attention, no interruptions, no prethink, use empathy, listen to tone and voice modulation, recapitulate points, etc.), Use of group and individual brainstorming techniques to promote idea generation., Learning and showcasing the principles of documentation of team session outcomes

Unit V: Social and Cultural Etiquette & Internal Communication

Need for etiquette (impression, image, earn respect, appreciation, etc), Aspects of social and cultural/corporate etiquette in promoting teamwork, Importance of time, place, propriety and adaptability to diverse cultures, Use of various channels of transmitting information including digital and physical, to team members.

B.Tech. (CS)

Course Outcomes:

CO	Statement
	After the completion of this course, students will be able to:
CO1	Prepare their resume in an appropriate template without grammatical and other errors and using proper syntax and Participate in a simulated interview
CO2	Actively participate in group discussions towards gainful employment, Capture a self interview simulation video regarding the job role concerned and Enlist the common errors generally made by candidates in an interview.
CO3	Perform appropriately and effectively in group discussions and Explore sources (online/offline) of career opportunities
CO4	Use common technology messaging tools that are used in enterprises for flow of information and transition from command and control to informal communication during online/offline team session & Actively use and operate online team communication tools Webinar, Skype, Zoom, Google hangout etc
CO5	Appreciate and demonstrate Team Skills & Generate, share and maximise new ideas with the concept of brainstorming and the documentation of key critical ideas/thoughts articulated and action points to be implemented with timelines in a team discussion (as MOM) in identified applicable templates

Course Delivery methods

BTCSPCC 508: Computer Graphics & Multimedia Lab

Course Objective:

- To implement different computer graphics algorithms, this algorithm make them learn about the creation of primitives of graphics, storage and generation.
- To create interactive graphics applications in C++ using one or more graphics application programming interfaces.
- To write programs that demonstrates geometrical transformations.

List of Experiments:

1. Implementation of Line, Circle and ellipse attributes
2. To plot a point (pixel) on the screen
3. To draw a straight line using DDA Algorithm
4. Implementation of mid-point circle generating Algorithm
5. Implementation of ellipse generating Algorithm
6. Two Dimensional transformations - Translation, Rotation, Scaling, Reflection, Shear
7. Composite 2D Transformations
8. Cohen Sutherland 2D line clipping and Windowing
9. Sutherland – Hodgeman Polygon clipping Algorithm
10. Three dimensional transformations - Translation, Rotation, Scaling
11. Composite 3D transformations
12. Drawing three dimensional objects and Scenes
13. Generating Fractal images

B.Tech. (CS)

Course Outcomes

At the end of the course, a student will be able to:

CO1:	List the basic concepts used in computer graphics.
CO2:	Implement various algorithms to scan, convert the basic geometrical primitives, transformations, Area filling, clipping.
CO3:	Describe the importance of viewing and projections.
CO4:	Define the fundamentals of animation, virtualreality and its related technologies.
CO5:	Implement various algorithms to Fractal images, dimensional objects and Scenes

Course Delivery methods	
CD1	Lecture by use of boards/LCD projectors/OHP projectors
CD2	Tutorials/Assignments
CD3	Seminars
CD4	Self- learning advice using internets
CD5	Industrial visit

BTCSPCC 509 : Compiler Design Lab

Course Objective:

- To deepen the understanding of compiler design - Develop problem solving ability using programming - Develop ability to design and analyze a compiler
- To implement Lexical Analyzer using Lex tool & Syntax Analyzer or parser using YACC Tool
- To implement front end of the compiler by means of generating Intermediate codes.
- To implement code optimization techniques.

List of Experiments:

1. Introduction: Objective, scope and outcome of the course.
2. To identify whether given string is keyword or not.
3. Count total no. of keywords in a file. [Taking file from user]
4. Count total no of operators in a file. [Taking file from user]
5. Count total occurrence of each character in a given file. [Taking file from user]
6. Write a C program to insert, delete and display the entries in Symbol Table.
7. Write a LEX program to identify following:
 - 1) Valid mobile number
 - 2) Valid url
 - 3) Valid identifier
 - 4) Valid date (dd/mm/yyyy)
 - 5) Valid time (hh:mm:ss)
8. Write a lex program to count blank spaces, words, lines in a given file.
9. Write a lex program to count the no. of vowels and consonants in a C file.
10. Write a YACC program to recognize strings aaab, abbb using a^nb^n , where $b \geq 0$.
11. Write a YACC program to evaluate an arithmetic expression involving operators +, -, * and /.
12. Write a YACC program to check validity of a strings abcd, aabbcd using grammar $a^nb^nc^md^m$, where $n, m > 0$
13. Write a C program to find first of any grammar.

B.Tech. (CS)

Course Outcomes:

At the end of the course, the student will be able to:

CO1:	Discuss grammar specification develop the lexical analyzer
CO2:	Discuss parser specification design top-down and bottom-up Parsers
CO3:	Practice syntax directed translation schemes
CO4:	Experiment algorithms to generate code for a target machine
CO5:	Practice LEX programs and understands the principles of it

Course Delivery methods

CD1	Lecture by use of boards/LCD projectors/OHP projectors
CD2	Tutorials/Assignments

BTCSPCC 510 : Analysis of Algorithms Lab

Course Objective:

- To Design and implement efficient algorithms for a specified application.
- To Strengthen the ability to identify and apply the suitable algorithm for the given real world problem.

List of Experiments:

1. Sort a given set of elements using the Quicksort method and determine the time required to sort the elements. Repeat the experiment for different values of n, the number of elements in the list to be sorted and plot a graph of the time taken versus n. The elements can be read from a file or can be generated using the random number generator.
2. Implement a parallelized Merge Sort algorithm to sort a given set of elements and determine the time required to sort the elements. Repeat the experiment for different values of n, the number of elements in the list to be sorted and plot a graph of the time taken versus n. The elements can be read from a file or can be generated using the random number generator.
3. a. Obtain the Topological ordering of vertices in a given digraph. b. Compute the transitive closure of a given directed graph using Warshall's algorithm.
4. Implement 0/1 Knapsack problem using Dynamic Programming.
5. From a given vertex in a weighted connected graph, find shortest paths to other vertices using Dijkstra's algorithm.
6. Find Minimum Cost Spanning Tree of a given undirected graph using Kruskal's algorithm.
7. a. Print all the nodes reachable from a given starting node in a digraph using BFS method. b. Check whether a given graph is connected or not using DFS method.
8. Find Minimum Cost Spanning Tree of a given undirected graph using Prim's algorithm.
9. Implement All-Pairs Shortest Paths Problem using Floyd's algorithm.
10. Implement N Queen's problem using Back Tracking.

B.Tech. (CS)

Course Outcomes:

At the end of the course, the student will be able to:

CO1:	Discuss algorithms analyze worst-case running times of algorithms based on asymptotic analysis and justify the correctness of algorithms.
CO2:	Understand the greedy paradigm and explain when an algorithmic design situation calls for it. For a given problem develop the greedy algorithms.
CO3:	Experiment the divide-and-conquer paradigm and explain when an algorithmic design situation calls for it. Synthesize divide-and-conquer algorithms. Derive and solve recurrence relation.
CO4:	Experiment the dynamic-programming paradigm and explain when an algorithmic design situation calls for it. For a given problems of dynamic-programming and develop the dynamic programming algorithms, and analyze it to determine its computational complexity.
CO5:	Practice the Floyd's algorithm, Back Tracking and Spanning Tree

BTCSPPC 511: Python Lab

Course Objective:

- To describe the need for Object-oriented programming concepts in Python.
- To infer the supported data structures like lists, dictionaries and tuples in Python.
- To illustrate the application of matrices and regular expressions in building the Python programs.
- To discover the use of external modules in creating excel files and navigating the file systems.

List of Experiments

1. Write a program to demonstrate basic data type in python.
2. Write a program to compute distance between two points taking input from the user
3. Write a program add.py that takes 2 numbers as command line arguments and prints its sum.
4. Write a Program for checking whether the given number is an even number or not.
5. Using a for loop, write a program that prints out the decimal equivalents of 1/2, 1/3, 1/4, . . . , 1/10
6. Write a Program to demonstrate list and tuple in python.
7. Write a program using for loop that loops over a sequence.
8. Write a program using a while loop that asks the user for a number, and prints a countdown from that number to zero.
9. Find the sum of all the primes below two million.
10. By considering the terms in the Fibonacci sequence whose values do not exceed four million, WAP to find the sum of the even-valued terms.
11. Write a program to count the numbers of characters in the string and store them in a dictionary data structure.
12. Write a program to use split and join methods in the string and trace a birthday of a person with a dictionary data structure
13. Write a program to count frequency of characters in a given file. Can you use character frequency to tell whether the given file is a Python program file, C program file or a text file?
14. Write a program to print each line of a file in reverse order.
15. Write a program to compute the number of characters, words and lines in a file.
16. Write a function nearly equal to test whether two strings are nearly equal. Two strings a and b are nearly equal when a can be generated by a single mutation on.
17. Write function to compute gcd, lcm of two numbers. Each function shouldn't exceed one line.
18. Write a program to implement Merge sort.
19. Write a program to implement Selection sort, Insertion sort.

B.Tech. (CS)

Course Outcomes:

At the end of the course, the student will be able to:

CO1:	Create, Test and Debug Python Programs
CO2:	Implement Conditionals and Loops for Python Programs
CO3:	Use functions and represent Compound data using Lists, Tuples and Dictionaries
CO4:	Read and write data from & to files in Python and develop Application using Python.
CO5:	Illustrate sort methods in Python Programs.

Course Delivery methods

BTCSPSIT 512: Industrial Training & Seminar**Course Objectives:**

- To acquire and apply fundamental principles of engineering.
- To update with all the latest changes in technological world.
- To identify, formulate and model problems and find engineering solution based on a systems approach.

Course Outcomes:

At the end of the course, the student will be able to:

CO1:	Capability to acquire and apply fundamental principles of engineering.
CO2:	Become master in one's specialized technology
CO3:	Become updated with all the latest changes in technological world.
CO4:	Ability to identify, formulate and model problems and find engineering solution based on a systems approach.
CO5:	Ability to understand the real problems of world and use the models to solve it.

Table: Mapping of Course Outcomes with Program Outcomes

BTCSSODECA 513: Social Outreach, Discipline & Extra Curricular Activities**Course Objectives:**

- To allowing students to explore strengths and talents outside of academics.
- To helping students develop stronger time-management and organizational skills.
- To giving students the opportunity to build friendships and participate in group activities outside of the tight circle of the regular classroom.
- To helping to build confidence and self-esteem

Course Outcomes:

At the end of the course, the student will be able to:

CO1:	Develop their self-confidence, leadership qualities, and their responsibilities towards the commUnity.
CO2:	Have an impact on academic development, personal development, and civic responsibility
CO3:	Understand the value of Social Work.
CO4:	Understand the Significance of Discipline in student's Life
CO5:	Contribute towards in social up-gradation by social organization like, Art of Living, Yoga etc., Blood donation, Awareness programs, personality development programs,

Table : Mapping of Course Outcomes with Program Outcomes

BTBSC514: ANANDAM

Objectives:

- To instil the joy of giving in young people, turning them into responsible citizens to build up a better society.
- To inculcate the habit of service in students across the University.
- A compulsory course of 2 credits per semester to be included in each program of University.
- Students to be expected to engage in individual and group acts of service and goodness.

Action Plan:

Students will be expected to

- Do at least one act of individual service each day
- Record this act of service in a dedicated Register / Personal Diary
- Share this Register / Personal Diary day in the Anandam Class scheduled per week. The class interaction will include Personal Diary check, Showing of CommUnity based motivation videos, CommUnity based presentations by students, Role playing etc.
- Undertake one group service project for 64 hours every semester (outside college hours)
- Upload the report on the group project on the Anandam platform
- Participate in a sharing and presentation on the group service in the discussion sessions held once in week
- There will be some suggested projects and organizations that students can work with. Students can also suggest their own projects which others can join

Each student will finish the year with a portfolio of giving. This will include their Register / Personal Diaries and their reports on group service projects.

BTCSESC 601: Digital Image Processing

Course Objectives::

- To learn digital image fundamentals.
- To be exposed to simple image processing techniques.
- To be familiar with image compression and segmentation techniques.
- To learn to represent image in form of features.

Course Contents:

Unit I: Introduction to Image Processing: Digital Image representation, Sampling & Quantization, Steps in image Processing, Image acquisition, color image representation.

Unit II: Image Transformation & Filtering: Intensity transform functions, histogram processing, Spatial filtering, Fourier transforms and its properties, frequency domain filters, colour models, Pseudo colouring, colour transforms, Basics of Wavelet Transforms

Unit III: Image Restoration: Image degradation and restoration process, Noise Models, Noise Filters, degradation function, Inverse Filtering, Homomorphism Filtering.

Unit IV: Image Compression: Coding redundancy, Interpixel redundancy, Psychovisual redundancy, Huffman Coding, Arithmetic coding, Lossy compression techniques, JPEG Compression.

Unit V: Image Segmentation & Representation: Point, Line and Edge Detection, Thresholding, Edge and Boundary linking, Hough transforms, Region Based Segmentation, Boundary representation, Boundary Descriptors.

B.Tech. (CS)

Course Outcomes:

At the end of the course, the student will be able to:

CO1:	Review the fundamental concepts of a digital image processing system
CO2:	Describe images in the frequency domain using various transforms
CO3:	Apply the techniques for image enhancement and image restoration
CO4:	Explain Interpret Image compression standards.
CO5:	Classify image segmentation and representation techniques.

Course Delivery methods

CD1	Lecture by use of boards/LCD projectors/OHP projectors
CD2	Tutorials/Assignments
CD3	Seminars
CD4	Self- learning advice using internets
CD5	Industrial visit

BTCSPCC 602 : Machine Learning

Course Objectives:

- To introduce students to the basic concepts and techniques of **Machine Learning**.
- To develop skills of using recent **machine learning** software for solving practical problems.
- To gain experience of doing independent study and research.

Course Contents:

Unit I: Supervised learning algorithm: Introduction, types of learning, application, Supervised learning: Linear Regression Model, Naïve Bayes classifier Decision Tree, K nearest neighbor, Logistic Regression, Support Vector Machine, Random forest algorithm

Unit II: Unsupervised learning algorithm: Grouping unlabelled item using k-means clustering, Hierarchical Clustering, Probabilistic clustering, Association rule mining, Apriori Algorithm, f-p growth algorithm, Gaussian mixture model.

Unit III: Introduction to Statistical Learning Theory, Feature extraction-Principal component analysis, Singular value decomposition. Feature selection–feature ranking and subset selection, filter, wrapper and embedded methods, Evaluating Machine Learning algorithms and Model Selection.

Unit IV: Semi supervised learning, Reinforcement learning : Markov decision process (MDP), Bellman equations, policy evaluation using Monte Carlo, Policy iteration and Value iteration, Q-Learning, State-Action-Reward-State-Action (SARSA), Model-based Reinforcement Learning.

Unit V: Recommended system, Collaborative filtering, Content-based filtering Artificial neural network, Perceptron, Multilayer network, Back propagation, Introduction to Deep learning.

B.Tech. (CS)

Course Outcomes:

At the end of the course, the student will be able to:

CO1:	Describe intelligent agents for search and games
CO2:	Convert AI problems through programming with Python
CO3:	Learning optimization and inference algorithms for model learning
CO4:	Make programs for an agent to learn and act in a structured environment.
CO5:	Learn recommended system in ML.

Course Delivery methods	
CD1	Lecture by use of boards/LCD projectors/OHP projectors
CD2	Tutorials/Assignments
CD3	Seminars
CD4	Self- learning advice using internets
CD5	Industrial visit

BTCSPCC 603 : Information Security System

Course Objectives:

- To enhance knowledge and techniques for enforcement of security with some emphasis on cryptography.
- To develop an understanding of security policies (such as authentication, integrity and confidentiality).

Course Contents:

- Unit I:** Introduction to security attacks: services and mechanism, classical encryption techniques-substitution ciphers and transposition ciphers, cryptanalysis, stream and block ciphers.
- Unit II:** Modern block ciphers: Block Cipher structure, Data Encryption standard (DES) with example, strength of DES, Design principles of block cipher, AES with structure, its transformation functions, key expansion, example and implementation. Multiple encryption and triple DES, Electronic Code Book, Cipher Block Chaining Mode, Cipher Feedback mode, Output Feedback mode, Counter mode.
- Unit III:** Public Key Cryptosystems with Applications: Requirements and Cryptanalysis, RSA cryptosystem, Rabin cryptosystem, Elgamal crypto system, Elliptic curve cryptosystem
- Unit IV:** Cryptographic Hash Functions, their applications: Simple hash functions, its requirements and security, Hash functions based on Cipher Block Chaining, Secure Hash Algorithm (SHA). Message Authentication Codes, its requirements and security, MACs based on Hash Functions, Macs based on Block Ciphers .Digital Signature, its properties, requirements and security, various digital signature schemes (Elgamal and Schnorr), NIST digital Signature algorithm.
- Unit V:** Key management and distribution: symmetric key distribution using symmetric and asymmetric encryptions, distribution of public keys, X.509 certificates, Public key infrastructure. Remote user authentication with symmetric and asymmetric encryption, Kerberos Web Security threats and approaches, SSL architecture and protocol, Transport layer security, HTTPS and SSH

- Trappe & Washington, Introduction to Cryptography, 2nd Ed. Pearson.

B.Tech. (CS)

Course Outcomes:

At the end of the course, the student will be able to:

CO1:	Understand key terms and concepts in cyber law, intellectual property and cyber crimes, trademarks and domain theft.
CO2:	Apply computer technologies, digital evidence collection, and evidentiary reporting in forensic acquisition.
CO3:	Understand approaches for incident analysis and response.
CO4:	Understand Cryptographic Hash Functions and their applications.
CO5:	Learn Key management system.

Course Delivery methods

BTCSPCC 604: Computer Architecture and Organization

Course Objective:

- To discuss the basic concepts and structure of computers.
- To understand concepts of register transfer logic and arithmetic operations.
- To explain different types of addressing modes and memory organization.
- To learn the different types of serial communication techniques.
- To summarize the Instruction execution stages.

Course Contents:

- Unit I:** Computer Data Representation: Basic computer data types, Complements, Fixed point representation, Register Transfer and Micro-operations: Floating point representation, Register Transfer language, Register Transfer, Bus and Memory Transfers (Tree-State Bus Buffers, Memory Transfer), Arithmetic Micro-Operations, Logic Micro-Operations, Shift Micro-Operations, Arithmetic logical shift Unit. Basic Computer Organization and Design Instruction codes, Computer registers, computer instructions, Timing and Control, Instruction cycle, Memory-Reference Instructions, Input-output and interrupt, Complete computer description, Design of Basic computer, design of Accumulator Unit
- Unit II:** Programming The Basic Computer: Introduction, Machine Language, Assembly Language, assembler, Program loops, Programming Arithmetic and logic operations, subroutines, I-O Programming. Micro programmed Control: Control Memory, Address sequencing, Micro program Example, design of control
- Unit III:** Central Processing Unit: Introduction, General Register Organization, Stack Organization, Instruction format, Addressing Modes, data transfer and manipulation, Program Control, Reduced Instruction Set Computer (RISC) Pipeline And Vector Processing, Flynn's taxonomy, Parallel Processing, Pipelining, Arithmetic Pipeline, Instruction, Pipeline, RISC Pipeline, Vector Processing, Array Processors
- Unit IV:** Computer Arithmetic: Introduction, Addition and subtraction, Multiplication Algorithms (Booth Multiplication Algorithm), Division Algorithms, Floating Point Arithmetic operations, Decimal Arithmetic Unit. Input-Output Organization, Input-Output Interface, Asynchronous Data Transfer, Modes Of Transfer, Priority Interrupt, DMA, Input-Output Processor (IOP), CPU IOP Communication, Serial communication
- Unit V:** Memory Organization: Memory Hierarchy, Main Memory, Auxiliary Memory, Associative Memory, Cache Memory, Virtual Memory. Multiprocessors: Characteristics of Multiprocessors, Interconnection Structures, Inter-processor Arbitration, Inter-processor Communication and Synchronization, Cache Coherence, Shared Memory Multiprocessors.

Text & References books:

1. Computer Organization and Architecture - William Stallings (Pearson Education Asia)
2. Computer Organization and Architecture -John P. Hayes (McGraw-Hill)
3. Computer Organization -V. Carl. Hamsacher (McGraw-Hill)
4. Computer System Architecture-M. Morris Mano (PHI)

B.Tech. (CS)

Course Outcomes:

At the end of the course, the student will be able to:

CO1:	Calculate performance of the computer system and decode machine language
CO2:	Describe arithmetic and logic Unit
CO3:	Demonstrate pipelined control Units
CO4:	Demonstrate parallel processing architectures.
CO5:	Learn Memory Organization and Multiprocessors.

Course Delivery methods	
CD1	Lecture by use of boards/LCD projectors/OHP projectors
CD2	Tutorials/Assignments
CD3	Seminars
CD4	Self- learning advice using internets
CD5	Industrial visit

BTCSPCC 605 : Artificial Intelligence

Course Objective:

- To introduce the basic principles, techniques, and applications of **Artificial Intelligence**.
- To become familiar with basic principles of AI toward problem solving, inference, perception, knowledge representation, and learning.

Course Contents:

- Unit I:** Introduction to AI and Intelligent agent: Different Approach of AI, Problem Solving : Solving Problems by Searching, Uninformed search, BFS, DFS, Iterative deepening, Bi directional search, Hill climbing, Informed search techniques: heuristic, Greedy search, A* search, AO* search, constraint satisfaction problems.
- Unit II:** Game Playing: Minimax, alpha-beta pruning, jug problem, chess problem, tiles problem
- Unit III:** Knowledge and Reasoning: Building a Knowledge Base: Propositional logic, first order logic, situation calculus. Theorem Proving in First Order Logic.Planning, partial order planning. Uncertain Knowledge and Reasoning, Probabilities, Bayesian Networks
- Unit IV:** Learning: Overview of different forms of learning, Supervised base learning: Learning Decision Trees, SVM, Unsupervised based learning, Market Basket Analysis, Neural Networks.
- Unit V:** Introduction to Natural Language Processing: Different issue involved in NLP, Expert System, Robotics.

Text/ Reference Books:

- E.Rich,K Knight-Artificial Intelligence,Tata McGraw Hills.
- S.Russell,P.Norving-Artificial Intelligence-A Modern Approach, Pearson Education,Asia.
- Thomas Dean-Artificial Intelligence-Theory & Practice, Pearson Education, Asia.
- Alison Causey - The Essence of Artificial Intelligence, Pearson Education, Asia.

B.Tech. (CS)

Course Outcomes:

At the end of the course, the student will be able to:

CO1	Demonstrate fundamental understanding of the history of artificial intelligence (AI) and its foundations.
CO2	Apply basic principles of AI in solutions that require problem solving, inference, perception, knowledge representation, and learning.
CO3	Demonstrate proficiency developing applications in an 'AI language', expert system shell, or data mining tool.
CO4	Demonstrate an ability to share in discussions of AI, its current scope and limitations, and societal implications.
CO5	Understand Natural Language Processing in AI.

Course Delivery methods

CD1	Lecture by use of boards/LCD projectors/OHP projectors
CD2	Tutorials/Assignments
CD3	Seminars

BTCSPCC 606: Cloud Computing

Course Objectives:

- To understand the basics of Cloud Computing.
- To understand the movement from a traditional network infrastructure to a Cloud solution.

Course Contents:

Unit I: Introduction: Objective, scope and outcome of the course. Introduction Cloud Computing: Nutshell of cloud computing, Enabling Technology, Historical development, Vision, feature Characteristics and components of Cloud Computing. Challenges , Risks and Approaches of Migration into Cloud. Ethical Issue in Cloud Computing, Evaluating the Cloud's Business Impact and economics, Future of the cloud. Networking Support for Cloud Computing. Ubiquitous Cloud and the Internet of Things

Unit II: Cloud Computing Architecture: Cloud Reference Model, Layer and Types of Clouds, Services models, Data centre Design and inter connection Network, Architectural design of Compute and Storage Clouds. Cloud Programming and Software: Fractures of cloud programming, Parallel and distributed programming paradigms-Map Reduce, Had oop, High level Language for Cloud. Programming of Google App engine.

Unit III: Virtualization Technology: Definition, Understanding and Benefits of Virtualization. Implementation Level of Virtualization, Virtualization Structure/Tools and Mechanisms, Hypervisor VMware, KVM, Xen. Virtualization: of CPU, Memory, I/O Devices, Virtual Cluster and Resources Management, Virtualization of Server, Desktop, Network, and Virtualization of data-centre

Unit IV: Securing the Cloud: Cloud Information security fundamentals, Cloud security services, Design principles, Policy Implementation, Cloud Computing Security Challenges, Cloud Computing Security Architecture .Legal issues in cloud Computing. Data Security in Cloud: Business Continuity and Disaster Recovery, Risk Mitigation, Understanding and Identification of Threats in Cloud, SLA-Service Level Agreements, Trust Management

Unit V: Cloud Platforms in Industry: Amazon web services, Google App Engine, Microsoft Azure Design, Aneka: Cloud Application Platform-Integration of Private and Public Clouds Cloud applications: Protein structure prediction, Data Analysis, Satellite Image Processing, CRM

B.Tech. (CS)

Course Outcomes:

At the end of the course, the student will be able to:

CO1:	Compute the Cloud computing setup with it's vulnerabilities and applications using different architectures.
CO2:	Discuss different workflows according to requirements and apply map reduce programming model.
CO3:	Describe suitable Virtualization concept, Cloud Resource Management and design scheduling algorithms.
CO4:	Apply combinatorial auctions for cloud resources and design scheduling algorithms for computing clouds
CO5:	Describe cloud Storage systems and Cloud Platforms in Industry.

Course Delivery methods

BTCSPEC 607A: Distributed System

Course Objectives

- To provide an introduction to the fundamentals of distributed computer systems, assuming the availability of facilities for data transmission.
- To demonstrate the knowledge of the core architectural aspects of distributed systems.

Course Contents:

Unit I: Distributed Systems: Features of distributed systems, nodes of a distributed system, Distributed computation paradigms, Model of distributed systems, Types of Operating systems: Centralized Operating System, Network Operating Systems, Distributed Operating Systems and Cooperative Autonomous Systems, design issues in distributed operating systems. Systems Concepts and Architectures: Goals, Transparency, Services, Architecture Models, Distributed Computing Environment (DCE). Theoretical issues in distributed systems: Notions of time and state, states and events in a distributed system, time, clocks and event precedence, recording the state of distributed systems.

Unit II: Concurrent Processes and Programming: Processes and Threads, Graph Models for Process Representation, Client/Server Model, Time Services, Language Mechanisms for Synchronization, Object Model Resource Servers, Characteristics of Concurrent Programming Languages (Language not included). Inter-process Communication and Coordination: Message Passing, Request/Reply and Transaction Communication, Name and Directory services, RPC and RMI case studies

Unit III: Distributed Process Scheduling: A System Performance Model, Static Process Scheduling with Communication, Dynamic Load Sharing and Balancing, Distributed Process Implementation. Distributed File Systems: Transparencies and Characteristics of DFS, DFS Design and implementation, Transaction Service and Concurrency Control, Data and File Replication. Case studies: Sun network file systems, General Parallel file System and Window's file systems. Andrew and Coda File Systems

Unit IV: Distributed Shared Memory: Non-Uniform Memory Access Architectures, Memory Consistency Models, Multiprocessor Cache Systems, Distributed Shared Memory, Implementation of DSM systems. Models of Distributed Computation: Preliminaries, Causality, Distributed Snapshots, Modelling a Distributed Computation, Failures in a Distributed System, Distributed Mutual Exclusion, Election, Distributed Deadlock handling, and Distributed termination detection.

Unit V: Distributed Agreement: Concept of Faults, failure and recovery, Byzantine Faults, Adversaries, Byzantine Agreement, Impossibility of Consensus and Randomized Distributed Agreement. Replicated Data Management: concepts and issues, Database Techniques, Atomic Multicast, and Update Propagation. CORBA case study: Introduction, Architecture, CORBA RMI, CORBA Services

4. Ananth Grama, Anshul Gupta, George Karypis, Vipin Kumar, "Introduction to parallel computing", 2nd Edition, Pearson Education, 2007

B.Tech. (CS)

Course Outcomes:

At the end of the course, the student will be able to:

CO1:	Distinguish distributed computing paradigm from other computing paradigms
CO2:	Identify the core concepts of distributed systems
CO3:	Illustrate the mechanisms of inter process communication in distributed system
CO4:	Apply appropriate distributed system principles in ensuring transparency, consistency and fault-tolerance in distributed file system
CO5:	Discuss the Database Techniques and CORBA case studies.

BTCSPEC 607B: Software Defined Network

Course Objective:

- To learn the fundamentals of software defined networks.
- To understand the separation of the data plane and the control plane.
- To study about the SDN Programming.
- To study about the various applications of SDN

Course Contents:

Unit I: History and Evolution of Software Defined Networking (SDN): Separation of Control Plane and Data Plane, IETF Forces, Active Networking. Control and Data Plane Separation: Concepts, Advantages and Disadvantages, the Open Flow protocol..

Unit II: Network Virtualization: Concepts, Applications, Existing Network Virtualization Framework (VMWare and others), Mininet based examples. Control Plane: Overview, Existing SDN Controllers including Floodlight and Open Daylight projects

Unit III: Customization of Control Plane: Switching and Firewall Implementation using SDN Concepts. Data Plane: Software-based and Hardware-based; Programmable Network Hardware..

Unit IV: Programming SDNs: Northbound Application Programming Interface, Current Languages and Tools, Composition of SDNs. Network Functions Virtualization (NFV) and Software Defined Networks: Concepts, Implementation and Applications

Unit V: Data Center Networks: Packet, Optical and Wireless Architectures, Network Topologies. Use Cases of SDNs: Data Centers, Internet Exchange Points, Backbone Networks, Home Networks, Traffic Engineering. Programming Assignments for implementing some of the theoretical concepts listed above.

B.Tech. (CS)

Course Outcomes:

At the end of the course, the student will be able to:

CO1:	Examine the challenges and opportunities associated with adopting SDN compared to traditional approaches to networking.
CO2:	Analyze the functions and components of the SDN architecture.
CO3:	Discuss the major requirements of the design of an SDN protocol.
CO4:	Design and create an SDN network consisting of SDN switches and a centralized controller.
CO5:	Analyze the performance of the SDN network by using verification and troubleshooting techniques.

Course Delivery methods

BTCSPEC 607C: Ecommerce & ERP

Course Objective:

- To give student an overview of all aspects of E-Commerce. Topics include development of the Internet and E-Commerce.
- To give them awareness about options available for doing business on the Internet, features of Web sites and the tools used to build an E-Commerce web site, marketing issues, payment options, security issues, and customer service.

Course Contents:

Unit I: Introduction to E-Commerce: Defining Commerce; Main Activities of Electronic Commerce; Benefits of E-Commerce; Broad Goals of Electronic Commerce; Main Components of E-Commerce; Functions of Electronic Commerce–Communication, Process Management, Service Management, Transaction Capabilities; Process of E-Commerce; Types of E-Commerce; Role of Internet and Web in E-Commerce; Technologies Used; E-Commerce Systems; Pre-requisites of E-Commerce; Scope of E-Commerce; E-Business Models.

Unit II: E-Commerce Activities: Various Activities of E-Commerce; Various Modes of Operation Associated with E-Commerce; Matrix of E-Commerce Types; Elements and Resources Impacting E-Commerce and Changes; Types of E-Commerce Providers and Vendors; Man Power Associated with E-Commerce Activities; Opportunity Development for E-Commerce Stages; Development of E-Commerce Business Case; Components and Factors for the Development of the Business Case; Steps to Design and Develop an E-Commerce Website.

Unit III: Internet–The Backbone for E-Commerce: Early Ages of Internet; Networking Categories; Characteristics of Internet; Components of Internet–Internet Services, Elements of Internet, Uniform Resource Locators, Internet Protocol; Shopping Cart, Cookies and E-Commerce; Web Site Communication; Strategic Capabilities of Internet.

Unit IV: SP, WWW and Portals: Internet Service Provider (ISP); World Wide Web(WWW); Portals–Steps to build homepage, Metadata; Advantages of Portal; Enterprise Information Portal (EIP).E-Commerce & Online Publishing: This Unit explains the concept of online publishing, strategies and approaches of online publishing, and online advertising

Unit V: XML and Data Warehousing: Definition of extensible Markup Language(XML); XML Development Goals; Comparison between HTML and XML; Business importance in using XML Based Technology; Advantages, Disadvantages and Applications of XML; Structure of an XML Document; XHTML and X/Secure; Data Warehousing; Data Marts and Operational Data Stores. E-Marketing: Traditional Marketing; E-Marketing; Identifying Web Presence Goals–Achieving web presence goals, Uniqueness of the web, Meeting the needs of website visitors, Site Adhesion: Content, format and access; Maintaining a Website; Metrics Defining Internet Units of Measurement; Online Marketing; Advantages of Online Marketing.

Reference/Text Books:

1. A. Lexis Leon, “Enterprise Resource Planning”, TMH
2. Brady, Manu, Wegner, “Enterprise Resource Planning”, TMH

B.Tech. (CS)

Course Outcomes:

At the end of the course, the student will be able to:

CO1:	Demonstrate and understanding of the foundations and importance of E-commerce.
CO2:	Demonstrate an understanding of retailing in E-commerce by: analyzing branding and pricing strategies, using and determining the effectiveness of market research assessing the effects of disintermediation.
CO3:	Analyze the impact of E-commerce on business models and strategy.
CO4:	Describe Internet trading relationships including Business to Consumer, Business-to-Business, Intra-organizational.
CO5:	Describe extensible Markup Language and Website Maintenance.

BTCSPCC 608 : Digital Image Processing Lab

Course Objective:

- To work effectively alone or as a member of a small group working on some programming tasks.
- To prepare and deliver coherent and structured verbal and written technical reports
- To use laboratory equipment effectively.

List of Experiments

1. Point-to-point transformation. This laboratory experiment provides for thresholding an image and the evaluation of its histogram. Histogram equalization. This experiment illustrates the relationship among the intensities (gray levels) of an image and its histogram.
2. Geometric transformations. This experiment shows image rotation, scaling, and translation. Two-dimensional Fourier transform
3. Linear filtering using convolution. Highly selective filters.
4. Ideal filters in the frequency domain. Non Linear filtering using convolutional masks. Edge detection. This experiment enables students to understand the concept of edge detectors and their operation in noisy images.
5. Morphological operations: This experiment is intended so students can appreciate the effect of morphological operations using a small structuring element on simple binary images. The operations that can be performed are erosion, dilation, opening, closing, open-close, close-open.

B.Tech. (CS)

Course Outcomes:

At the end of the course, the student will be able to:

CO1:	Create and write programs in Matlab language for digital manipulation of images; image acquisition; preprocessing; segmentation; Fourier domain processing; and compression.
CO2:	Plan and undertake a major individual image processing project.
CO3:	Working of laboratory equipment effectively

Course Delivery methods

BTCSPCC 609: Machine Learning Lab

Course Objective:

- To Make use of Data sets in implementing the machine learning algorithms
- To Analyze and evaluate simple algorithms for pattern classification.
- To implement the machine learning concepts and algorithms in any suitable language of choice.

List of Experiments

1. Implement and demonstrate the FIND-S algorithm for finding the most specific hypothesis based on a given set of training data samples. Read the training data from a .CSV file.
2. For a given set of training data examples stored in a .CSV file, implement and demonstrate the Candidate-Elimination algorithm to output a description of the set of all hypotheses consistent with the training examples.
3. Write a program to demonstrate the working of the decision tree based ID3 algorithm. Use an appropriate data set for building the decision tree and apply this knowledge to classify a new sample
4. Build an Artificial Neural Network by implementing the Backpropagation algorithm and test the same using appropriate data sets
5. Write a program to implement the naïve Bayesian classifier for a sample training data set stored as a .CSV file. Compute the accuracy of the classifier, considering few test data sets.
6. Assuming a set of documents that need to be classified, use the naïve Bayesian Classifier model to perform this task. Built-in Java classes/API can be used to write the program. Calculate the accuracy, precision, and recall for your data set.
7. Write a program to construct a Bayesian network considering medical data. Use this model to demonstrate the diagnosis of heart patients using standard Heart Disease Data Set. You can use Java/Python ML library classes/API.
8. Apply EM algorithm to cluster a set of data stored in a .CSV file. Use the same data set for clustering using k-Means algorithm. Compare the results of these two algorithms and comment on the quality of clustering. You can add Java/Python ML library classes/API in the program.
9. Write a program to implement k-Nearest Neighbour algorithm to classify the iris data set. Print both correct and wrong predictions. Java/Python ML library classes can be used for this problem.
10. Implement the non-parametric Locally Weighted Regression algorithm in order to fit data points. Select appropriate data set for your experiment and draw graphs.

B.Tech. (CS)

Course Outcomes:

At the end of the course, the student will be able to:

CO1:	Build intelligent agents for search and games
CO2:	Solve AI problems through programming with Python
CO3:	Learning optimization and inference algorithms for model learning
CO4:	Design and develop programs for an agent to learn and act in a structured environment.
CO5:	Implement the non-parametric Locally Weighted Regression algorithm in order to fit data points.

BTCSPCC 610: Advance Java Lab

Course Objective:

- To Using Graphics, Animations and Multithreading for designing Simulation and Game based applications.
- To Design and develop GUI applications using Abstract Windowing Toolkit (AWT), Swing and Event Handling.
- To Design and develop Web applications
- To Designing Enterprise based applications by encapsulating an application's business logic.
- To Designing applications using pre-built frameworks.

List of Experiments:

1. Introduction To Swing, MVC Architecture, Applets, Applications and Pluggable Look and Feel, Basic swing components : Text Fields, Buttons, Toggle Buttons, Checkboxes, and Radio Buttons
2. Java database Programming, java.sql Package, JDBC driver, Network Programming With java.net Package, Client and Server Programs, Content And Protocol Handlers
3. RMI architecture, RMI registry, Writing distributed application with RMI, Naming services, Naming And Directory Services, Overview of JNDI, Object serialization and Internationalization
4. J2EE architecture, Enterprise application concepts, n-tier application concepts, J2EE platform, HTTP protocol, web application, Web containers and Application servers
5. Server side programming with Java Servlet, HTTP and Servlet, Servlet API, life cycle, configuration and context, Request and Response objects, Session handling and event handling, Introduction to filters with writing simple filter application
6. JSP architecture, JSP page life cycle, JSP elements, Expression Language, Tag Extensions, Tag Extension API, Tag handlers, JSP Fragments, Tag Files, JSTL, Core Tag library, overview of XML Tag library, SQL Tag library and Functions Tag library

B.Tech. (CS)

Course Outcomes

At the end of the course, the student will be able to:

CO1:	Show to access database through Java programs, using Java Data Base Connectivity (JDBC)
CO2:	Practice to create dynamic web pages, using Servlets and JSP.
CO3:	Apply to make a reusable software component, using Java Bean.
CO4:	Classify the invoke the remote methods in an application using Remote Method Invocation (RMI)
CO5:	Understand the multi-tier architecture of web-based enterprise applications using Enterprise JavaBeans (EJB).

BTCSPCC 611: Mobile Application Development Lab

Course Objective:

- To demonstrate the android features and create ,develop using android
- To demonstrate and Understanding anatomy of an Android application
- To Apply the android geo location based services

List of Experiments

1. To study Android Studio and android studio installation. Create “Hello World” application.
2. To understand Activity, Intent, Create sample application with login module.(Check username and password).
3. Design simple GUI application with activity and intents e.g. calculator.
4. Develop an application that makes use of RSS Feed.
5. Write an application that draws basic graphical primitives on the screen
6. Create an android app for database creation using SQLite Database.
7. Develop a native application that uses GPS location information
8. Implement an application that writes data to the SD card.
9. Design a gaming application
10. Create an application to handle images and videos according to size.

B.Tech. (CS)

Course Outcomes:

At the end of the course, the student will be able to:

CO1:	Demonstrate the android features and create, develop using android
CO2:	Demonstrate and Understanding anatomy of an Android application
CO3:	Apply the android geo location based services
CO4:	Illustrate the android wifi features and advance android development
CO5:	Demonstrate the linux security and implement ADL interface

BTCSSODECA 612: Social Outreach, Discipline & Extra Curricular Activities**Course Objectives:**

- To allowing students to explore strengths and talents outside of academics.
- To helping students develop stronger time-management and organizational skills.
- To giving students the opportunity to build friendships and participate in group activities outside of the tight circle of the regular classroom.
- To helping to build confidence and self-esteem

Course Outcomes:

At the end of the course, the student will be able to:

CO1:	Develop their self-confidence, leadership qualities, and their responsibilities towards the community.
CO2:	Have an impact on academic development, personal development, and civic responsibility
CO3:	Understand the value of Social Work.
CO4:	Understand the Significance of Discipline in student's Life
CO5:	Contribute towards in social up-gradation by social organization like, Art of Living, Yoga etc., Blood donation, Awareness programs, personality development programs

BTBSC 613: ANANDAM

Objectives:

- To instil the joy of giving in young people, turning them into responsible citizens to build up a better society.
- To inculcate the habit of service in students across the University.
- A compulsory course of 2 credits per semester to be included in each program of University.
- Students to be expected to engage in individual and group acts of service and goodness.

Action Plan:

Students will be expected to

- Do at least one act of individual service each day
- Record this act of service in a dedicated Register / Personal Diary
- Share this Register / Personal Diary day in the Anandam Class scheduled per week. The class interaction will include Personal Diary check, Showing of CommUnity based motivation videos, CommUnity based presentations by students, Role playing etc.
- Undertake one group service project for 64 hours every semester (outside college hours)
- Upload the report on the group project on the Anandam platform
- Participate in a sharing and presentation on the group service in the discussion sessions held once in week
- There will be some suggested projects and organizations that students can work with. Students can also suggest their own projects which others can join

Each student will finish the year with a portfolio of giving. This will include their Register / Personal Diaries and their reports on group service projects.

BTCSPCC 701A: Internet of Things

Course Objectives:

- To explore to the interconnection and integration of the physical world and the cyber space.
- To be able to design & develop IOT Devices.

Course Contents:

Unit-I Introduction: Objective, scope and outcome of the course.

Unit-II Introduction to IoT: Definition and characteristics of IOT, Design of IOT: Physical design of IOT, Logical Design of IOT- Functional Blocks, communication models, communication APIs, IOT enabling Technologies- Wireless Sensor Networks, Cloud computing, big data analytics, embedded systems. IOT Levels and deployment templates.

Unit-III IoT Hardware and Software: Sensor and actuator, Humidity sensors, Ultrasonic sensor, Temperature Sensor, Arduino, Raspberry Pi, LiteOS, RIoTOS, Contiki OS, Tiny OS.

Unit-IV Architecture and Reference Model: Introduction, Reference Model and architecture, Representational State Transfer (REST) architectural style, Uniform Resource Identifiers (URIs). Challenges in IoT- Design challenges, Development challenges, Security challenges, Other challenges.

Unit-V IOT and M2M: M2M, Difference and similarities between IOT and M2M, Software defined networks, network function virtualization, difference between SDN and NFV for IoT. Case study of IoT Applications: Domain specific IOTs- Home automation, Cities, environment, Energy, Retail, Logistics, Agriculture, Industry, Health and Lifestyles.

2. Daniel Kellmerit, "The Silent Intelligence: The Internet of Things". 2013, ISBN 0989973700

B.Tech. (CS)

Course Outcomes:

At the end of the course, the student will be able to:

CO1:	Understand the application areas of IOT
CO2:	Discuss the revolution of Internet in Mobile Devices, Cloud & Sensor Networks
CO3:	Understand building blocks of Internet of Things and characteristics.
CO4:	Demonstrate the Architecture and Reference Model of IOT.
CO5:	Describe Case study of IoT Applications.

BTCSPCC701B: Block Chain Technology

Course Objectives:

- To be able to study the basics of Block chain technology.
- To explore various aspects of Block chain technology like application in various domains.
- To explore the idea about private and public Block chain, and smart contract.

Course Contents:

Unit-1 Introduction of Cryptography and Block chain: What is Block chain, Block chain Technology Mechanisms & Networks, Block chain Origins, Objective of Block chain, Block chain Challenges, Transactions And Blocks, P2P Systems, Keys As Identity, Digital Signatures, Hashing, and public key cryptosystems, private vs. public Block chain.

Unit-2 BitCoin and Crypto currency: What is Bitcoin, The Bitcoin Network, The Bitcoin Mining Process, Mining Developments, Bitcoin Wallets, Decentralization and Hard Forks, Ethereum Virtual Machine (EVM), Merkle Tree, Double-Spend Problem, Blockchain And Digital Currency, Transactional Blocks, Impact Of Blockchain Technology On Crypto currency.

Unit-3 Introduction to Ethereum: What is Ethereum, Introduction to Ethereum, Consensus Mechanisms, How Smart Contracts Work, Metamask Setup, Ethereum Accounts, Receiving Ether's What's a Transaction?, Smart Contracts.

Introduction to Hyperledger: What is Hyperledger? Distributed Ledger Technology & its Challenges, Hyperledger & Distributed Ledger Technology, Hyperledger Fabric, Hyperledger Composer.

Unit-4 Solidity Programming: Solidity - Language of Smart Contracts, Installing Solidity & Ethereum Wallet, Basics of Solidity, Layout of a Solidity Source File & Structure of Smart Contracts, General Value Types (Int, Real, String, Bytes, Arrays, Mapping, Enum, address)

Unit-5 Block chain Applications: Internet of Things, MedicalRecord Management System, Domain Name Service andFuture of Block chain, Alt Coins.

Reference Books:

2. Antonopoulos, Mastering Bitcoin.
3. Antonopoulos and G. Wood, Mastering Ethereum.
4. D. Drescher, Blockchain Basics. Apress, 2017.

B.Tech. (CS)

Course Outcomes:

At the end of the course, the student will be able to:

CO1:	Understand and explore the working of Block chain technology
CO2:	Analyze the working of Smart Contracts
CO3:	Understand and analyze the working of Ethereum and Hyperledger.
CO4:	Apply the learning of solidity and de-centralized apps on Ethereum
CO5:	Describe and study of various Block chain Applications.

Course Delivery methods	
CD1	Lecture by use of boards/LCD projectors/OHP projectors
CD2	Tutorials/Assignments
CD3	Seminars
CD4	Self- learning advice using internets
CD5	Industrial visit

BTCSPCC 701C: Natural Language Processing

Course Objectives:

- To familiarize the concepts and techniques of Natural language Processing for analyzing words based on Morphology.
- To provide the understanding of the mathematical and linguistic foundations underlying approaches to the various areas in NLP.
- To explore the Linguistic essentials such as syntactic and semantic analysis of text.

Course Contents:

Unit-1 Fundamental components of Natural Language Processing: Lexicography, syntax, semantics, prosody, phonology, pragmatic analysis, world knowledge.

Unit-2 Knowledge Representation schemes: Semantic net, Frames, Conceptual Dependency, Scripts.

Representing knowledge using rules: Logic Programming, Introduction to LISP and Prolog, Rules based deduction systems, General concepts in knowledge acquisition.

Unit-3 Syntax Analysis: Formal Languages and grammars, Chomsky Hierarchy, Left-Associative Grammars, ambiguous grammars, resolution of ambiguities.

Semantics: Knowledge representation, semantics networks logic and inference pragmatics, graph models and optimization.

Unit-4 Computation Linguistics: Recognition and parsing of natural language structures- ATN and RTN, General Techniques of parsing- CKY, Earley and Tomita algorithm.

Unit-5 Applications of NLP: Intelligent work processor, Machine translation, user interfaces, Man-Machine interfaces, natural language querying, tutoring and authoring systems, speech recognition, commercial use of NLP.

REFERENCE BOOKS:

1. Daniel Jurafsky, James H. Martin, "Speech and Language Processing: An Introduction to Natural Language Processing, Computational Linguistics and Speech Recognition", 2nd edition, Pearson Edu., 2013.
2. James Allen, "Natural Language Understanding", Pearson Education, Second Edition, 2003.
3. Ivan Bratko, "Prolog: Programming for Artificial Intelligence", 3rd Edition, Pearson Education, Fifth Impression 2009.
4. G. Gazder, "Natural Language processing in prolog", Addison Wesley, 1989.

B.Tech. (CS)

Course Outcomes:

At the end of the course, the student will be able to:

CO1	Be familiar with syntax and semantics in NLP.
CO2	To implement various concepts of knowledge representation using Prolog.
CO3	To classify different parsing techniques and understand semantic networks.
CO4	To identify the General Techniques of parsing.
CO5	To identify and explain various applications of NLP.

Course Delivery methods	
CD1	Lecture by use of boards/LCD projectors/OHP projectors
CD2	Tutorials/Assignments
CD3	Seminars
CD4	Self- learning advice using internets
CD5	Industrial visit

BTC SOE 702A: Principle of Electronic Communication

Course Objectives:

- To Apply the knowledge of statistical theory of communication and explain the conventional digital communication system.
- To understand and analyze the signal flow in a digital communication system. To understand concept of spread spectrum communication system.

Course Contents:

Unit-I Introduction: Need for Modulation, Frequency translation, Electromagnetic spectrum, Gain, Attenuation and decibels.

Unit-II Introduction: Simple description on Modulation: Analog Modulation-AM, Frequency modulation-FM, Pulse Modulation-PAM, PWM, PCM, Digital Modulation Techniques-ASK, FSK, PSK, QPSK modulation and demodulation schemes.

Unit-III Telecommunication Systems: Telephones Telephone system, Paging systems, Internet, Telephony. Networking and Local Area Networks: Network fundamentals, LAN hardware, Ethernet LANs, Token Ring LAN.

Unit-IV Satellite Communication: Satellite Orbits, satellite communication systems, satellite subsystems, Ground Stations Satellite Applications, Global Positioning systems. Optical Communication: Optical Principles, Optical Communication Systems, Fiber – Optic Cables, Optical Transmitters & Receivers, Wavelength Division Multiplexing.

Unit-V Cellular and Mobile Communications: Cellular telephone systems, AMPS, GSM, CDMA and WCDMA. Wireless Technologies: Wireless LAN, PANs and Bluetooth, Zig Bee and Mesh Wireless networks,

Text/Reference Books:

1. Principles of Electronic Communication Systems, Louis E. Frenzel, 3e, McGraw Hill publications, 2008.
2. Electronic Communications systems, Kennedy, Davis 4e, MC GRAW HILL EDUCATION, 1999

6. Introduction to data communications and networking, Wayne Tomasi, Pearson Education, 2005.
7. Taub H. and Schilling D.L, "Principles of Communication Systems" Tata McGraw Hill, 2001

B.Tech. (CS)

Course Outcomes:

At the end of the course, the student will be able to:

CO1:	Understand and Gain the knowledge of AM and FM signals
CO2:	Knowledge about using PAM, PWM, PCM
CO3:	Understand concept of LAN, PAN
CO4:	Gain the knowledge about Satellite and Fiber –Optic Cables.
CO5:	Demonstrate Cellular and Mobile Communications.

Course Delivery methods	
CD1	Lecture by use of boards/LCD projectors/OHP projectors
CD2	Tutorials/Assignments
CD3	Seminars
CD4	Self- learning advice using internets
CD5	Industrial visit

BTC SOE 702B: Micro and Smart System Technology

Course Objectives:

- To Gain knowledge of Smart Materials, Sensors & Actuators, Microsystems.
- To Understand the Operation of Smart Devices & Systems, Electronic Circuits & Control for MEMS, Methodology of Micro-manufacturing.

Course Contents:

Unit-I INTRODUCTION TO MICRO AND SMART SYSTEMS: (b) Microsystems-Introduction, History and their evolution, Feynman's vision. Micromachined transducers. Evolution of micro-manufacturing. Multi-disciplinary aspects. Applications areas. Commercial products.

Unit-II Micro and Smart Devices and Systems: Principles and Materials:

- a) Definitions and salient features of sensors, actuators, and systems.
- b) Sensors: silicon capacitive accelerometer, piezo-resistive pressure sensor, blood analyzer, conductometric gas sensor, fiber-optic gyroscope and surface-acoustic-wave based wireless strain sensor.
- c) Actuators: silicon micro-mirror arrays, piezo-electric based inkjet print head, electrostatic comb-drive and micromotor, magnetic micro relay, shape memory-alloy based actuator, electro-thermal actuator.
- d) Systems: micro gas turbine, portable clinical analyzer, active noise control in a helicopter cabin.

Unit-III Micro Manufacturing and Material Processing: a. Silicon wafer processing, lithography, thin-film deposition, etching (wet and dry), wafer-bonding, and metallization. b. Silicon micromachining: surface, bulk, moulding, bonding based process flows. c. Thick-film processing: d. Smart material processing: e. Processing of other materials: ceramics, polymers and metals f. Emerging trends.

Unit-IV Modeling: a. Scaling issues. b. Elastic deformation and stress analysis of beams and plates. Residual stresses and stress gradients. Thermal loading. Heat transfer issues. Basic fluids issues. c. Electrostatics. Coupled electromechanics. Electromagnetic actuation. Capillary-electro-phoresis. Piezoresistive modeling. Piezoelectric modeling. Magnetostrictive actuators.

B.Tech. (CS)

Unit-V Integration and Packaging of Microelectro Mechanical Systems: Integration of microelectronics and micro devices at wafer and chip levels. Microelectronic packaging: wire and ball bonding, flip-chip. Low temperature-cofired-ceramic (LTCC) multi-chip-module technology. Microsystem packaging examples. Examples from smart systems and micromachined accelerometer or a thermal cyler BEL pressure sensor, thermal cyler for DNA amplification, and active vibration control of a beam

Text/Reference Books:

1. MEMS & Microsystems: Design and Manufacture, Tai-Ran Tsu, Tata Mc- Graw-Hill.
2. “Micro and Smart Systems” by Dr. A.K.Aatre, Prof. Ananth Suresh, Prof.K.J.Vinoy, Prof. S. Gopalakrishna,, Prof.K.N.Bhat., John Wiley Publications.
3. Microsystems Design, S. D. Senturia, 2001, Kluwer Academic Publishers, Boston, USA. ISBN 0-7923-7246-8.
4. Analysis and Design Principles of MEMS Devices, Minhang Bao, Elsevier, Amsterdam, The Netherlands, ISBN 0-444-51616-6.
5. Design and Development Methodologies, Smart Material Systems and MEMS: V. Varadan, K. J. Vinoy, S. Gopalakrishnan, Wiley.
6. MEMS- Nitaigour Premchand Mahalik, The Mc-GrawHill 2007.

B.Tech. (CS)

Course Outcomes:

At the end of the course, the student will be able to:

CO1:	Describe micro sensors and actuators and smart systems.
CO2:	Understand the role of smart actuators in micro machining.
CO3:	Make models of micro systems using conventional modeling techniques
CO4:	Understand methods for integration of micro and smart systems.
CO5:	Define the reliability of electronic circuits and control methods used to develop micro and smart systems.

Course Delivery methods	
CD1	Lecture by use of boards/LCD projectors/OHP projectors
CD2	Tutorials/Assignments
CD3	Seminars
CD4	Self- learning advice using internets

BTC SOE 702C: Optimization Techniques

Course Objectives:

- To understand the theory of optimization methods and algorithms developed for solving various types of optimization problems
- To develop and promote research interest in applying optimization techniques in problems of Engineering and Technology
- To apply the mathematical results and numerical techniques of optimization theory to concrete Engineering problems.

Course Contents:

Unit-I Introduction and Classification Basic concept of optimization, Mathematical formulation of optimization problems; applications of optimization in chemical engineering. Classification of Optimization Problems - single variable problems, Multivariable problems without constraints, Multivariable problems with constraints

Unit-II Maximization and minimization problems. Single Variable Optimization Necessary and sufficient conditions for optimum; interpolation method quadratic. Region elimination methods-internal halving, Fibonacci.

Unit-III Multivariable Optimization Optimization of Functions One Dimensional Search: Analytical Methods: classification, stationary points, direct substitution, constrained variation, penalty function, Lagrangian Multiplier, Kuhn-Tucker theorem. Numerical methods general principles of numerical search, direction of search, final stage in search, direct search, pattern search.

Unit-IV Other Optimization Technics Introduction to geometric, dynamic and integer programming and genetic algorithms. Application of Geometric Programming: chemical engineering problems with degree of difficulty equal to zero or one with constraints.

Unit-V Applications of Optimization Optimization of staged and discrete processes. Optimal shell-tube heat exchanger design. Optimal pipe diameter.

Text/Reference Books:

1. Hiller and Lieberman, Introduction to Operation Research (Seventh Edition) Tata McGrawHill Publishing Company Ltd
2. Ravindren Philips and Solberg, Operation Research Principles and Practice (Second Edition) John Wiley & Sons.

B.Tech. (CS)

Course Outcomes:

At the end of the course, the student will be able to:

CO1:	Explain linear Programming Problems
CO2:	Demonstrate the optimum solution to constrained and unconstrained
CO3:	Apply dynamic programming principle to Linear programming problems.
CO4:	Describe the integer solutions to Linear Programming Problems.
CO5:	Explain Applications of Optimization.

BTCSPCC 703: Mobile computing

Course Objectives:

- To understand the various terminology, principles, devices, schemes, concepts, generations, and different methodologies used in Mobile and Wireless Communication Networks.
- To introduce the student to the major concepts involved in Wireless LAN(IEEE 802.11) and Bluetooth.
- To study the operation of basic cellular system and performance criterion, handoff mechanism, etc.
- To expose students to emerging technologies and their potential impact.

Course Contents:

- Unit I** Introduction: Applications, A short history of wireless communications, a market for mobile communications, some open research topics, a simplified reference model.
- Unit II** Wireless transmission: Frequency for radio transmission, signals, Antennas, Signal propagation, multiplexing, modulation, cellular systems.
- Unit III** GSM: Mobile services, System architecture, Radio interface, Protocols, Localization and calling, Handover, Security, and New data services.
- Unit IV** (Wireless) Medium Access Control : Motivation for a specialized MAC (Hidden and exposed terminals, Near and far terminals), SDMA, FDMA, TDMA, CDMA. Mobile Network Layer: Mobile IP (Goals, assumptions, entities and terminology, IP packet delivery, agent advertisement and discovery, registration, tunneling and encapsulation, optimizations), Dynamic Host Configuration Protocol (DHCP).
- Unit V** Mobile Transport Layer : Traditional TCP, Indirect TCP, Snooping TCP, Mobile TCP, Fast retransmit/fast recovery, Transmission /time-out freezing, Selective retransmission, Transaction oriented TCP.

Text Books/Reference Books

1. Jochen Schiller, "Mobile Communications", Addison-Wesley.(Chapters 4,7,9,10,11),second edition, 2004.
2. Stojmenovic and Cacute, "Handbook of Wireless Networks and Mobile Computing", Wiley, 2002, ISBN 0471419028. (Chapters 11, 15, 17, 26 and 27)
3. T. Rappaport, "Wireless Communication: Principles and Practice", Pearson Education.
4. Mobile computing, RajKamal,Oxford University press.
5. Adelstein, Frank, Gupta, Sandeep KS, Richard III, Golden ,Schwiebert, Loren, "Fundamentals of Mobile and Pervasive Computing", ISBN: 0071412379, McGraw-Hill Professional, 2005.

B.Tech. (CS)

Course Outcomes

At the end of the course, the student will be able to:

CO1:	Understanding of different generations, terminologies, systems, operations and design of wireless and mobile communications.
CO2:	Acquire sufficient knowledge about IEEE 802.11 and Bluetooth standards.
CO3:	Appreciate the contribution of Mobile and Wireless Communication networks to overall technological growth
CO4:	Understand the concepts and technology involved in 3G, 4G and 5G Networks
CO5:	Understand the different Mobile Transport Layers

Course Delivery methods

CD1	Lecture by use of boards/LCD projectors/OHP projectors

BTCSPCC 704: Cloud Security

Course Objectives:

- To understand the needs and application of security in cloud computing.
- To understand the security features of cloud security in cloud computing

Course Contents:

Unit I: Cloud Computing Software Security Fundamentals: Introduction to Cryptography, Cloud Information Security Objectives, Confidentiality, Integrity, and Availability.

Unit II: Cloud Security Services: Authentication, Authorization, Auditing, Accountability. Relevant Cloud Security Design Principles, Secure Cloud Software Requirements, Approaches to Cloud Software Requirements Engineering, Secure Cloud Software Testing.

Unit III: Cloud Computing Security Challenges: Security Policy Implementation, Policy Types, Regulatory Policies, Informative Policies, Computer Security Incident Response Team, Virtualization Security Management, Virtual Threats, Hypervisor Risks, Increased Denial of Service Risk, VM Security Recommendations, Best Practice Security Techniques, VM-Specific Security Techniques, Hardening the Virtual Machine, Securing VM Remote Access.

Unit IV: Infrastructure Security: The Network Level, The Host Level, The Application Level

Data Security And Storage: Aspects of Data Security, Data Security Mitigation, Provider Data and Its Security

Unit V: Identity And Access Management: Trust Boundaries and IAM, Why IAM?, IAM Challenges, IAM Definitions, IAM Architecture and Practice, CloudWatch, Cloud Trail

Reference Books:

1. IBM Book, "Cloud Security", 2016.
2. William Stallings. "Cryptography and network security", 7/E. Pearson Education India, 2019.
3. Chris Doston, " Practical Cloud Security", F/E, O'Reilly, 2019
4. Tim Mather, SubraKumaraswamy, and ShahedLatif , "Cloud Security and Privacy", 3/E O'Reilly, 2019.
5. Ronald L. Krutz, Russell Dean Vines, Cloud Security- A Comprehensive Guide to Secure Cloud Computing, Wiley, 2010

B.Tech. (CS)

Course Outcomes:

At the end of the course, the student will be able to:

CO1:	Understand the Security Objectives and principle.
CO2:	Understand the Cloud Security Services.
CO3:	Investigate and analyze in-depth the security challenges associated with cloud deployment models and cloud delivery models
CO4:	Understand Infrastructure & data security for cloud.
CO5:	Understand the Identity and Access Management in cloud computing.

Course Delivery methods	
CD1	Lecture by use of boards/LCD projectors/OHP projectors
CD2	Tutorials/Assignments
CD3	Seminars
CD4	Self- learning advice using internets

BTCSSSEC 705: RESEARCH AND PUBLICATION ETHICS

Course Objectives:

- To identify the concept of research.
- To identify the scientific conduct of research.
- To understand the publication Ethics.
- To understand Open access publications and publication misconduct.
- To understand the Research Data and Research Metrics.

Course Contents:

Unit I: PHILOSOPHY AND ETHICS

1. Introduction to Philosophy : definition, nature and Scope, Concept, Branches
2. Ethics: definition, moral philosophy, nature of moral judgements and reaction

Unit II: SCIENTIFIC CONDUCT

1. Ethics with respect to science and research
2. Intellectual honesty and research integrity
3. Scientific misconducts: Falsification, Fabrication, and Plagiarism (FFP)
4. Redundant publications: duplicate and overlapping publications, salami slicing
5. Selective reporting and misrepresentation of data.

Unit III: PUBLICATION ETHICS

1. Publication ethics: definition, introduction and importance
2. Best practices /Standards setting initiatives and guidelines: COPE, WAME, etc.,
3. Conflicts of interest
4. Publication misconduct: definition, concept, problems that lead to unethical behavior and vice versa, types
5. Violation of publication ethics, authorship and contributorship
6. Identification of publication misconduct, complaints and appeals
7. Predatory publishers and journals

Unit IV: OPEN ACCESS PUBLISHING AND PUBLICATION MISCONDUCT

1. Open access publications and initiatives
2. SHEERPA/ROAMEO online resource to check publisher copyright & Self – archiving policies
3. Software tool to identify predatory publications developed by SPPU
4. Journal finder /Journal suggestion tools viz. JANE., Elsevier journal Finder, Springer Journal Suggester, etc.
5. Subject specific ethical issues, FFP, authorship

B.Tech. (CS)

6. Conflicts of interest
7. Complaints and appeals: examples and fraud from India and abroad.
8. Use of plagiarism software like Turnitin, Urkund and other open source software tools

Unit V: DATABASES AND RESEARCHMETRICS

A. Databases

1. Indexing databases
2. Citation databases: Web of Science, Scopus, etc.

B. Research Metrics

1. Impact Factor of Journal as per Journal Citation Report, SNIP, SJR, IPP, CiteScore
2. Metrics: h-index, g index, i10 index, altmetrics

Reference:

1. Bird, A.(2006). Philosophy of Science.Routledge

B.Tech. (CS)

Course Outcomes:

COs	Statement
	After completion of this course, students will be able to:
CO1	Understand the concept of research.
CO2	Understand the scientific conduct of research.
CO3	Understand the publication Ethics.
CO4	Understand Open access publications and publication misconduct. ct.
CO5	Understand the Research Data and Research Metrics.

Course Delivery methods

CD1	Lecture by use of boards/LCD projectors/OHP projectors

BTBSC 706: Leadership & Management Skills

Course Objectives:

- To help students to develop essential skills to influence and motivate others
- To inculcate emotional and social intelligence and integrative thinking for effective leadership
- To create and maintain an effective and motivated team to work for the society
- To nurture a creative and entrepreneurial mindset
- To make students understand the personal values and apply ethical principles in professional and social contexts.

Course Contents

Unit I Leadership Skills

Understanding Leadership and its Importance: What is leadership? Why Leadership required? Whom do you consider as an ideal leader? Traits and Models of Leadership: Are leaders born or made? Key characteristics of an effective leader, Leadership styles, Perspectives of different leaders. Basic Leadership Skills: Motivation, Team work, Negotiation, Networking. Innovative Leadership. Concept of emotional and social intelligence, Synthesis of human and artificial intelligence, Why does culture matter for today's global leaders.

Unit II Managerial Skills

Basic Managerial Skills, Planning for effective management, How to organise teams? Recruiting and retaining talent, Delegation of tasks, Learn to coordinate, Conflict management, Self Management Skills, Understanding self concept, Developing self-awareness, Self-examination, Self-regulation.

Unit III Entrepreneurial Skills

Basics of Entrepreneurship: Meaning of entrepreneurship, Classification and types of entrepreneurship, Traits and competencies of entrepreneur, Creating Business Plan, Problem identification and idea generation, Idea validation, Pitch making.

Unit IV Design Thinking

Design Thinking: What is design thinking? Key elements of design thinking: Discovery, Interpretation, Ideation- Experimentation – Evolution, How to transform challenges into port Unities?

How to develop human-centric solutions for creating social good?

B.Tech. (CS)

Unit V Ethics and Integrity

Learning through Biographies: What makes an individual great? Understanding the persona of a leader for deriving holistic inspiration, Drawing insights for leadership, How leaders sail through difficult situations? Ethics and Conduct, Importance of ethics, Ethical decision making, Personal and professional moral codes of conduct, Creating a harmonious life

B.Tech. (CS)

Course Outcome:

CO1	Examine various leadership models and understand/assess their skills, strengths and abilities that affect their own leadership style and can create their leadership vision
CO2	Learn and demonstrate a set of practical skills such as time management, self management, handling conflicts, team leadership, etc.
CO3	Understand the basics of entrepreneurship and develop business plans
CO4	Apply the design thinking approach for leadership
CO5	Discuss the importance of ethics and moral values for making of a balanced personality

Course Delivery methods	
CD1	Lecture by use of boards/LCD projectors/OHP projectors
CD2	Tutorials/Assignments
CD3	Seminars
CD4	Self- learning advice using internets
CD5	Industrial visit

Mapping between Objectives and Outcomes

BTCSPPC 707A: Internet of Things Lab

Course Objectives:

- To focus on research – design and development of IoT enabled technologies which are cost effective and socially relevant.
- To develop trained manpower (through student projects/research) in the field of IoT based application development.

List of Exercises

1. Start Raspberry Pi and try various Linux commands in command terminal window:
ls, cd, touch, mv, rm, man, mkdir, rmdir, tar, gzip, cat, more, less, ps, sudo, cron, chown, chgrp, ping etc.
2. Run some python programs on Pi like:
 - a) Read your name and print Hello message with name
 - b) Read two numbers and print their sum, difference, product and division.
 - c) Word and character count of a given string.
 - d) Area of a given shape (rectangle, triangle and circle) reading shape and appropriate values from standard input.
3. Run some python programs on Pi like:
 - a) Print a name 'n' times, where name and n are read from standard input, using for and while loops.
 - b) Handle Divided by Zero Exception.
 - c) Print current time for 10 times with an interval of 10 seconds.
 - d) Read a file line by line and print the word count of each line.
4.
 - a) Light an LED through Python program
 - b) Get input from two switches and switch on corresponding LEDs
 - c) Flash an LED at a given on time and off time cycle, where the two times are taken from a file.
5.
 - a) Flash an LED based on cron output (acts as an alarm)
 - b) Switch on a relay at a given time using cron, where the relay's contact terminals are connected to a load.
 - c) Get the status of a bulb at a remote place (on the LAN) through web.
- 6 The student should have hands on experience in using various sensors like temperature, humidity, smoke, light, etc. and should be able to use control web camera, network, and relays connected to the Pi.

B.Tech. (CS)

Course Outcomes:

At the end of the course, the student will be able to:

CO1:	Describe different types of commands ls, cd, touch, mv, rm, man, mkdir, rmdir, tar, gzip, cat, more, less, ps, sudo, cron, chown, bchgrp, ping .
CO2:	Understand to run the programs on Pi
CO3:	Implement the programs using different logics.
CO4:	Demonstrate Linux commands.
CO5:	Read and apply some python programs on Pi.

Course Delivery methods

CD1	Lecture by use of boards/LCD projectors/OHP projectors
CD2	Tutorials/Assignments
CD3	Seminars
CD4	Self- learning advice using internets
CD5	Industrial visit

BTCSPCC 707B: Block Chain Technology Lab

Course Objectives:

- To focus on research – design and development of IoT enabled technologies which are cost effective and socially relevant.
- To develop trained manpower (through student projects/research) in the field of IoT based application development.

List of Exercises

1. Create a Simple Blockchain in any suitable programming language.
2. Use Geth to Implement Private Ethereum Block Chain.
3. Build Hyperledger Fabric Client Application.
4. Build Hyperledger Fabric with Smart Contract.
5. Create Case study of Block Chain being used in illegal activities in real world.
6. Using Python Libraries to develop Block Chain Application.

B.Tech. (CS)

Course Outcomes:

At the end of the course, the student will be able to:

CO1:	Describe different types of commands ls, cd, touch, mv, rm, man, mkdir, rmdir, tar, gzip, cat, more, less, ps, sudo, cron, chown, bchgrp, ping .
CO2:	Understand to run the programs on Pi
CO3:	Implement the programs using different logics.
CO4:	Demonstrate Linux commands.
CO5:	Read and apply some python programs on Pi.

Course Delivery methods

BTCSPCC 707C: Natural Language Processing Lab

Course Objectives:

- To introduce the students with the basics of NLP which will empower them for developing advanced NLP tools and solving practical problems in the field.

List of Exercises

1. To study Preprocessing of text (Tokenization, Filtration, Script Validation, Stop Word Removal, Stemming)
2. To Study Morphological Analysis.
3. To study N-gram model.
4. To study POS tagging.
5. To study Chunking.
6. To study Named Entity Recognition.
7. Virtual Lab on Word Generation.
8. Mini project based on NLP applications.

B.Tech. (CS)

Course Outcomes:

At the end of the course, the student will be able to:

CO1:	Describe different Preprocessing of text
CO2:	Understand the Morphological Analysis in NLP.
CO3:	Understand the N-gram model and POS tagging.
CO4:	Demonstrate Virtual Lab on Word Generation.
CO5:	Read and apply some NLP applications.

Course Delivery methods

BTCSPCC 708 : Cyber Security Lab

Course Objectives:

- To Protect data and respond to threats that occur over the Internet
- To Design and implement risk analysis, security policies, and damage assessment

List of Exercises

1. Implement the following Substitution & Transposition Techniques concepts:
 - a) Caesar Cipher
 - b) Rail fence row & Column Transformation
2. Implement the Diffie-Hellman Key Exchange mechanism using HTML and JavaScript. Consider the end user as one of the parties (Alice) and the JavaScript application as other party (bob).
3. Implement the following Attack:
 - a) Dictionary Attack
 - b) Brute Force Attack
4. Installation of Wire shark, tcpdump, etc and observe data transferred in client server communication using UDP/TCP and identify the UDP/TCP datagram.
5. Installation of rootkits and study about the variety of options.
6. Perform an Experiment to Sniff Traffic using ARP Poisoning.
7. Demonstrate intrusion detection systems using any tool (snort or any other s/w).
8. Demonstrate how to provide secure data storage, secure data transmission and for creating digital signatures.

PROJECT:

In a small area location such as a house, office or in a classroom, there is a small network called a Local Area Network (LAN). The project aims to transfer a file peer-to-peer from one computer to another computer in the same LAN. It provides the necessary authentication for file transferring in the network transmission. By implementing the Server-Client technology, use a File Transfer Protocol mechanism and through socket programming, the end user is able to send and receive the encrypted and decrypted file in the LAN. An additional aim of the project is to transfer a file between computers securely in LANs. Elements of security are needed in the project because securing the files is an important task, which ensures files are not captured or altered by anyone on the same network. Whenever you transmit files over a network, there is a good chance your data will be encrypted by encryption technique.

Any algorithm like AES is used to encrypt the file that needs to transfer to another computer. The encrypted file is then sent to a receiver computer and will need to be decrypted before the user can open the file.

B.Tech. (CS)

Course Outcomes:

At the end of the course, the student will be able to:

CO1:	Install, configure, use and manage anti malware software on a working network
CO2:	Review and practice computer and network etiquette and ethics found in working environments
CO3:	Calculate best practices in security concepts to maintain confidentiality, integrity and availability of computer systems.
CO4:	Demonstrate intrusion detection systems.
CO5:	Demonstrate how to provide secure data storage, secure data transmission and for creating digital signatures.

BTCSPSIT 709: Industrial Training**Course Objectives:**

- To acquire and apply fundamental principles of engineering.
- To identify, formulate and present model problems.
- To identify, formulate and model problems and find engineering solution based on a systems approach.

Course Outcomes:

At the end of the course, the student will be able to:

CO1:	Capability to discuss and apply fundamental principles of engineering.
CO2:	Become master in one's specialized technology
CO3:	Interpret all the latest changes in technological world.
CO4:	Ability to identify, formulate and model problems find engineering solution based on a systems approach.
CO5:	Determine all software modeling approaches.

Table: Mapping of Course Outcomes with Program Outcomes

BTCSPSIT 710: Seminar**Course Objectives:**

- To Awareness of how to use values in improving your own professionalism.
- To Learning about personal and communication styles for team building.
- To identify, formulate and present model problems.
- To Learning management of values

Course Outcomes:

At the end of the course, the student will be able to:

CO1:	Personalize and create a communication style for individual & team building.
CO2:	Use values in improving one's own professionalism
CO3:	Develop the higher cognitive abilities that are analysis, synthesis and evaluation.
CO4:	Ability to identify, formulate and present model problems.
CO5 :	Describe latest technologies in own profession.

B.Tech. (CS)

BTCSSODECA 711: Social Outreach, Discipline & Extra Curricular Activities

Course Objectives:

- To allowing students to explore strengths and talents outside of academics.
- To helping students develop stronger time-management and organizational skills.
- To giving students the opportunity to build friendships and participate in group activities outside of the tight circle of the regular classroom.
- To helping to build confidence and self-esteem.

Course Outcomes:

At the end of the course, the student will be able to:

CO1:	Develop their self-confidence, leadership qualities, and their responsibilities towards the community.
CO2:	Have an impact on academic development, personal development, and civic responsibility
CO3:	Understand the value of Social Work.
CO4:	Understand the Significance of Discipline in student's Life
CO5:	Contribute towards in social up-gradation by social organization like, Art of Living, Yoga etc., Blood donation, Awareness programs, personality development programs,

Table: Mapping of Course Outcomes with Program Outcomes

BTBSC 712: ANANDAM

Objectives:

- To instil the joy of giving in young people, turning them into responsible citizens to build up a better society.
- To inculcate the habit of service in students across the University.
- A compulsory course of 2 credits per semester to be included in each program of University.
- Students to be expected to engage in individual and group acts of service and goodness.

Action Plan:

Students will be expected to

- Do at least one act of individual service each day
- Record this act of service in a dedicated Register / Personal Diary
- Share this Register / Personal Diary day in the Anandam Class scheduled per week. The class interaction will include Personal Diary check, Showing of CommUnity based motivation videos, CommUnity based presentations by students, Role playing etc.
- Undertake one group service project for 64 hours every semester (outside college hours)
- Upload the report on the group project on the Anandam platform
- Participate in a sharing and presentation on the group service in the discussion sessions held once in week
- There will be some suggested projects and organizations that students can work with. Students can also suggest their own projects which others can join

Each student will finish the year with a portfolio of giving. This will include their Register / Personal Diaries and their reports on group service projects.

BTCSPCC 801A: Big Data Analytics

Course Objectives:

- To provide an overview of an exciting growing field of big data analytics.
- To introduce the tools required to manage and analyze big data like Hadoop, NoSql MapReduce.
- To teach the fundamental techniques and principles in achieving big data analytics with scalability and streaming capability.
- To enable students to have skills that will help them to solve complex real-world problems in for decision support

Course Contents:

Unit-I: Introduction to Big Data: Big data features and challenges, Problems with Traditional Large-Scale System, Sources of Big Data, 3 V's of Big Data, Types of Data. Working with Big Data: Google File System. Hadoop Distributed File System (HDFS) - Building blocks of Hadoop (Namenode. Data node.Secondary Namenode.Job Tracker. Task Tracker), Introducing and Configuring Hadoop cluster (Local. Pseudodistributed mode, Fully Distributed mode). Configuring XML files.

Unit-II: Writing MapReduce Programs: A Weather Dataset. Understanding Hadoop API for MapReduce Framework (Old and New). Basic programs of Hadoop MapReduce: Driver code. Mapper code, Reducer code. Record Reader, Combiner, Partitioner.

Unit-III: Hadoop I/O: The Writable Interface. Writable Comparable and comparators. Writable Classes: Writable wrappers for Java primitives. Text.Bytes Writable.Null Writable, Object Writable and Generic Writable.Writable collections.Implementing a Custom Writable: Implementing a Raw Comparator for speed, Custom comparators.

Unit-IV: Pig:Hadoop Programming Made Easier Admiring the Pig Architecture, Going with the Pig Latin Application Flow. Working through the ABCs of Pig Latin.Evaluating Local and Distributed Modes of Running Pig Scripts, Checking out the Pig Script Interfaces, Scripting with Pig Latin.

Unit-V: Applying Structure to Hadoop Data with Hive: Saying Hello to Hive, Seeing How the Hive is Put Together, Getting Started with Apache Hive.Examining the Hive Clients.Working with Hive Data Types.Creating and Managing Databases and Tables, Seeing How the Hive Data Manipulation Language Works, Querying and Analyzing Data.

2. "Big Data: Does Size Matter?" by Timandra Harkness
3. "Big Data, Big Analytics: Emerging Business Intelligence and Analytic Trends for Today's Businesses" by Michael Minelli

B.Tech. (CS)

Course Outcomes:

At the end of the course, the student will be able to:

CO1:	Describe the key issues in big data management and its associated applications in intelligent business and scientific computing.
CO2:	Discuss fundamental enabling techniques and scalable algorithms like Hadoop, Map Reduce and NO SQL in big data analytics.
CO3:	Apply business models and scientific computing paradigms, and apply software tools for big data analytics.
CO4:	Describe adequate perspectives of big data analytics in various applications like recommender systems, social media applications etc.
CO5:	Discuss Hadoop Data with Hive

BTCSPCC 801B: R Programming

Course Objectives:

- To understand and able to use basic programming concepts
- To automate data analysis, working collaboratively and openly on code
- To know how to generate dynamic documents
- Able to use a continuous test driven development approach

Unit I Introduction: Overview of R, R data types and objects, reading and writing data, sub setting R Objects, Essentials of the R Language, Installing R, Running R, Packages in R, Calculations, Complex numbers in R, Rounding, Arithmetic, Modulo and integer quotients, Variable names and assignment, Operators, Integers, Factors, Logical operations

Unit II Control Structures and Vectors: Control structures, functions, scoping rules, dates and times, Introduction to Functions, preview of Some Important R Data Structures, Vectors, Character Strings, Matrices, Lists, Data Frames, Classes Vectors: Generating sequences, Vectors and subscripts, Extracting elements of a vector using subscripts, Working with logical subscripts, Scalars, Vectors, Arrays, and Matrices, Adding and Deleting Vector Elements, Obtaining the Length of a Vector, Matrices and Arrays as Vectors Vector Arithmetic and Logical Operations, Vector Indexing, Common Vector Operations

Unit III Lists: Creating Lists, General List Operations, List Indexing Adding and Deleting List Elements, Getting the Size of a List, Extended Example: Text Concordance Accessing List Components and Values Applying Functions to Lists, Data Frames, Creating Data Frames, Accessing Data Frames, Other Matrix-Like Operations

Unit IV Factors and Tables: Factors and Levels, Common Functions Used with Factors, Working with Tables, Matrix/Array-Like Operations on Tables , Extracting a Sub table, Finding the Largest Cells in a Table, Math Functions, Calculating a Probability, Cumulative Sums and Products, Minima and Maxima, Calculus, Functions for Statistical Distributions R PROGRAMMING 38 Syllabus ME-CSE

Unit V Object-Oriented Programming: S Classes, S Generic Functions, Writing S Classes, Using Inheritance, S Classes, Writing S Classes, Implementing a Generic Function on an S Class, visualization, Simulation, code profiling, Statistical Analysis with R, data manipulation

Text Books:

B.Tech. (CS)

Course Outcomes:

Upon completion of the course, the students should be able to

CO1:	Study and use basic fundamental concepts to solve the real world problem using R programming language.
CO2:	Design and implement the solution using scalar, vectors, matrices and statistical problems in R program.
CO3:	Design and implement the program using data frame, list to provide the solution for various problem.
CO4:	Study about factors and tables and to solve statistical problems.
CO5:	Minimize and maximize functions, simulation and visualization and statistical analysis using R.

Course Delivery methods	
CD1	Lecture by use of boards/LCD projectors/OHP projectors
CD2	Tutorials/Assignments
CD3	Seminars
CD4	Self- learning advice using internets
CD5	Industrial visit

BTCSPCC 801C: Deep Learning

Course Objectives:

- To introduce the idea of artificial neural networks and their architecture
- To introduce techniques used for training artificial neural networks
- To enable design of an artificial neural network for classification
- To enable design and deployment of deep learning models for machine learning problems

Course Contents:

Unit I Artificial Neural Networks- The Neuron-Expressing Linear Perceptrons as Neurons- Feed-Forward Neural Networks- Linear Neurons and Their Limitations –Sigmoid – Tanh – and ReLU Neurons -Softmax Output Layers – Training Feed-Forward Neural Networks-Gradient Descent-Delta Rule and Learning Rates

Unit II Gradient Descent with Sigmoidal Neurons- The Backpropagation Algorithm- Stochastic and Minibatch Gradient Descent – Test Sets – Validation Sets – and Overfitting- Preventing Overfitting in Deep Neural Networks – Implementing Neural Networks in TensorFlow.

Unit III Local Minima in the Error Surfaces of Deep Networks- Model Identifiability- Spurious Local Minima in Deep Networks- Flat Regions in the Error Surface – Momentum-Based Optimization – Learning Rate Adaptation.

Unit IV Convolutional Neural Networks (CNN) – Architecture -Accelerating Training with Batch Normalization- Building a Convolutional Network using Tensor Flow- Visualizing Learning in Convolutional Networks – Embedding and Representation Learning.

Unit V Auto encoder Architecture-Implementing an Auto encoder in Tensor Flow– Denoising Sparsity in Auto encoders Models for Sequence Analysis – Recurrent Neural Networks- Vanishing Gradients Long Short-Term Memory (LSTM) Units- Tensor Flow Primitives for RNN Models-Augmenting Recurrent Networks with Attention.

BTC SOE 802A: Soft Computing

Course Objectives:

- To conceptualize the working of human brain using ANN.
- To become familiar with neural networks that can learn from available examples and generalize to form appropriate rules for inference systems.
- To introduce the ideas of fuzzy sets, fuzzy logic and use of heuristics based on human experience.
- To provide the mathematical background for carrying out the optimization and familiarizing genetic algorithm for seeking global optimum in self-learning situation.

Course Contents:

Unit-I Introduction to Soft Computing: Aims of Soft Computing-Foundations of Fuzzy Sets Theory-Basic Concepts and Properties of Fuzzy Sets-Elements of Fuzzy Mathematics-Fuzzy Relations-Fuzzy Logic

Unit-II Application of Fuzzy Sets: Applications of Fuzzy Sets-Fuzzy Modeling-Fuzzy Decision Making-Pattern Analysis and Classification-Fuzzy Control Systems-Fuzzy Information Processing-Fuzzy Robotics.

Unit-III Artificial Neural Networks: Artificial Neural Networks-Models of Neuron-Architecture of Feed Forward Neural Networks, Recurrent Neural Networks-Learning methods-supervised and unsupervised learning-Time Delay Neural Networks-Radial Basis Function Neural Networks-Adaptive Resonance Theory (ART) Neural Networks-Associative Neural Memory Models-Application of ANN

Unit-IV Genetic Algorithms: Main Operators-Genetic Algorithm Based Optimization-Principle of Genetic Algorithm-Genetic Algorithm with Directed Mutation-Comparison of Conventional and Genetic Search Algorithms-Issues of GA in practical implementation. Introduction to Particle swarm optimization-PSO operators-GA and PSO in engineering applications

Unit-V Neuro-Fuzzy Technology: Fuzzy Neural Networks and their learning-Architecture of Neuro-Fuzzy Systems-Generation of Fuzzy Rules and membership functions-Fuzzification and Defuzzification in Neuro-Fuzzy Systems-Neuro-Fuzzy Identification-Neuro Fuzzy Control-Combination of Genetic Algorithm with Neural Networks-Combination of Genetic Algorithms and Fuzzy Logic-Neuro-Fuzzy and Genetic Approach in engineering applications.

Programming Using Matlab: Using Neural Network toolbox-Using Fuzzy Logic toolbox-Using Genetic Algorithm & directed search toolbox.

B.Tech. (CS)

B.Tech. (CS)

Course Outcomes:

At the end of the course, the student will be able to:

CO1:	Demonstrate the applications which can use fuzzy logic.
CO2:	Define design inference systems.
CO3:	Understand the difference between learning and programming and explore practical applications of Neural Networks (NN).
CO4:	Demonstrate the importance of optimizations and its use in computer engineering fields and other domains.
CO5:	Understand the efficiency of a hybrid system and how Neural Network and fuzzy logic can be hybridized to form a Neuro-fuzzy network and its various applications.

BTC SOE 802B: Robotics and Control

Course Objectives:

- To provide an introductory understanding of robotics.
- To a broad range of topics in robotics with emphasis on basics of manipulators, coordinate transformation and kinematics, trajectory planning, control techniques, sensors and devices, robot applications and economics analysis

Course Contents:

Unit-I Introduction: Introduction to control problem-Industrial Control examples. Transfer function. System response. Control hardware and their models: potentiometers, synchros, LVDT, dc and acservo motors, tacho-generators, electro hydraulic valves, hydraulic servomotors, electro pneumatic valves, pneumatic actuators. Closed-loop systems. Block diagram and signal flow graph analysis. Stability, steady-state accuracy, transient accuracy, disturbance rejection, insensitivity and robustness. proportional, integral and derivative systems. Feed forward and multi-loop control configurations, stability concept, relative stability, Routh stability criterion

Unit-II Time response of second-order systems-steady-state errors and error constants. Performance specifications in time-domain. Lead and lag compensation. Frequency-response analysis-Polar plots, Bode plot, stability in frequency domain, Nyquist plots. Nyquist stability criterion. Performance specifications in frequency-domain.. Lead and Lag compensation.07

Unit-III Robot Arm Kinematics: Introduction, The direct Kinematics Problem, Rotation Matrices, Composite Rotation Matrix, Rotation matrix about an arbitrary axis, Rotation matrix with Euler angle presentation, Geometric interpretation of Homogeneous transformation matrices, composite homogeneous transformation matrix, Links joints and their parameters. The Denavit Hartenberg representation. Kinematic equations for manipulators, Other specifications of the locations of the End-Effector, Classification of Manipulators, The inverse Kinematics problem, Inverse Transform Technique for Euler Angles Solution08

Unit-IV Planning of Manipulator Trajectories: Introduction, General considerations on Trajectory planning, joint-interpolated Trajectories, calculation of a 4-3-4 Joint trajectory, Cubic Spline Trajectory. Sensing: Range sensing, Triangulation, Structured Lighting Approach, Time-of-Flight range finders.

Proximity sensing, Inductive sensors, Hall effect sensors, Capacitive Sensors, Ultrasonic sensors, Optical Proximity Sensors, Touch sensors, Binary sensors, Analog sensors, Force and Torque sensing, Elements of a Wrist sensor. LOW-LEVEL VISION: Image acquisition, illumination Techniques, imaging geometry, some basic transformations, perspective transformations. Higher-Level Vision: Segmentation, Edge Linking and Boundary detection,

B.Tech. (CS)

Unit-V Camera model, camera calibration, stereo imaging, some basic relationships between pixels, Neighbours of a Pixel, connectivity, distance measures, Preprocessing, Spatial-Domain methods, Frequency-Domain methods, Smoothing, Enhancement, Edge detection, Thresholding. Thresholding. Region-oriented segmentation, the use of motion, description, Boundary descriptors, Regional descriptors.

4. Nagrath & Gopal, “Modern Control Engineering”, New Age International, New Delhi
5. James G. Keramas, “Robot Technology Fundamentals”, Cengage learning

B.Tech. (CS)

Course Outcomes:

At the end of the course, the student will be able to:

CO1:	Discuss the history, concepts and key components of robotics technologies.
CO2:	Describe and compare various robot sensors and their perception principles that enable a robot to analyse their environment, reason and take appropriate actions toward the given goal.
CO3:	Describe spatial coordinate representation and spatial transformation, robot locomotion, kinematics, motion control, localization and mapping, navigation and path planning.
CO4:	Apply and demonstrate the learned knowledge and skills in practical robotics applications.
CO5:	Produce robotic systems, algorithms and software capable of operating in complex and interactive environments.

BTCSOE 802C: Simulation Modeling and Analysis

Course Objective:

- To study modeling, design, simulation, planning, verification and validation.
- To learn the simulation techniques, the students are expected to be able to solve real world problems which cannot be solved strictly by mathematical approaches.

Course Contents:

- Unit-I Physical modeling:** Concept of system and environment, continuous and discrete system, linear and non linear system, stochastic activities, static and dynamic models, principles used in modeling, Basic simulation modeling, 4 Role of simulation in model evaluation and studies, Advantages and Dis advantages of simulation. Modeling of Systems, iconic analog. Mathematical Modeling
- Unit-II Computer System Simulation:** Technique of simulation, Monte Carlomethod, experimental nature of simulation, numerical computation techniques, continuous system models, analog and hybrid simulation, feedback systems 4 Buildings simulation models of wait ingline system, Jobshop, material handling and flexible manufacturing systems.
- Unit-III Probability concepts in simulation:** Stochastic variables, discrete and continuous probability functions mainly Normal, log normal, Weibull, exponential, Uniform, Poisson, Binomial, Triangular, Erlang etc.
- Unit-IV Random Numbers:** Properties, Generations methods, Tests for Random number-Frequency test, Runs test, Auto correlation test. Random Variate Generation: Inverse Transform Technique- Exponential, Uniform, Weibull, Triangular distributions, Direct trans formation for Normal and lognormal Distributions, convolution methods-Erlang distribution, Acceptance Rejection Technique
- Unit-IV Input Modeling:** Data collection, Identification and distribution with data, parameter estimation, Goodness of fit tests, Selection of input models without data, Multivariate and time series analysis. Verification and validation: Design of simulation experiments, validation of experimental models, testing and analysis.
- Unit-V Output Analysis–Types of Simulations with Respect to Output Analysis,** Stochastic Nature of output data, Measures of Performance and their estimation, Output analysis of terminating simulation, Output analysis of steady state simulations. Selection of Simulation Software, Simulation packages, Trendin Simulation. Do modeling using ARENA software which is freely available. Some more suggested simulation packages are Pro model, Quest, Witness, Extend, Simio etc. Students can learn

3. Simulation with ARENA, Keltan, Sadowskiand Turrock, McGrawHil
4. Simulation Modeling and ARENA, Rossetti and Taha,John Wiley and Sons
5. Systems Simulation with Digital Computer, Narsingh Deo, PHI Publication (EEE)

B.Tech. (CS)

Course Outcomes

At the end of the course, the student will be able to:

CO1:	Illustrate a relevant model for a multitude of problems from science and engineering, by extracting the necessary and 232relevant information regarding the problem.
CO2:	Define the different modeling terms by analyzing the system or the data that is present.
CO3:	Implement the model on the computer and from the results check for the validity of the model and correctness of the assumptions present in the model.
CO4:	Describe the outcomes (mostly through visualizations) and make predictions.
CO5:	Describe the Selection of Simulation Software

Course Delivery methods

BTCSPCC 803A: Big Data Analytics Lab

Course Objectives:

- To introduce the tools required to manage and analyze big data like Hadoop, NoSql Map Reduce.
- To teach the fundamental techniques and principles in achieving big data analytics with scalability and streaming capability.
- To enable students to have skills that will help them to solve complex real-world problems in for decision support.

Lab Experiments:

1. Implement the following Data structures in Java i) Linked Lists ii) Stacks iii) Queues iv) Set v) Map
2. Perform setting up and Installing Hadoop in its three operating modes: Standalone, Pseudo distributed, Fully distributed.
3. Implement the following file management tasks in Hadoop:
 - Adding files and directories
 - Retrieving files
 - Deleting files Hint: A typical Hadoop workflow creates data files (such as log files) elsewhere and copies them into HDFS using one of the above command line utilities.
4. Run a basic Word Count Map Reduce program to understand Map Reduce Paradigm.
5. Write a Map Reduce program that mines weather data. Weather sensors collecting data every hour at many locations across the globe gather a large volume of log data, which is a good candidate for analysis with MapReduce, since it is semi structured and record-oriented.
6. Implement Matrix Multiplication with Hadoop Map Reduce
7. Install and Run Pig then write Pig Latin scripts to sort, group, join, project, and filter your data.
8. Install and Run Hive then use Hive to create, alter, and drop databases, tables, views, functions, and indexes.
9. Solve some real life big data problems.

B.Tech. (CS)

Course Outcomes:

At the end of the course, Students will be able to:

CO1:	Understand the key issues in big data management and its associated applications in intelligent business and scientific computing.
CO2:	Acquire fundamental enabling techniques and scalable algorithms like Hadoop, Map Reduce and NO SQL in big data analytics.
CO3:	Interpret business models and scientific computing paradigms, and apply software tools for big data analytics.
CO4:	Apply adequate perspectives of big data analytics in various applications like recommender systems, social media applications etc.
CO5:	Describe big data problems.

BTCSPCC 803B: R Programming Lab

Course Objective:

This course introduces R, which is a popular statistical programming language. The course covers data reading and its manipulation using R, which is widely used for data analysis internationally. The course also covers different control structures and design of user-defined functions. Loading, installing and building packages are covered.

List of Practical:

1. Write an R script to do the following:
 - a) Simulate a sample of 100 random data points from a normal distribution with mean 100 and standard deviation 5 and store the result in a vector.
 - b) Visualize the vector created above using different plots.
 - c) Test the hypothesis that the mean equals 100.
 - d) Use wilcox test to test the hypothesis that mean equals 90.
2. Using the Algae data set from package DMwR to complete the following tasks.
 - a) Create a graph that you find adequate to show the distribution of the values of algae a6.
 - b) Show the distribution of the values of size 3.
 - c) Check visually if oPO4 follows a normal distribution.
 - d) Produce a graph that allows you to understand how the values of NO3 are distributed across the sizes of river.
 - e) Using a graph check if the distribution of algae a1 varies with the speed of the river.
 - f) Visualize the relationship between the frequencies of algae a1 and a6. Give the appropriate graph title, x-axis and y-axis title.
3. Read the file Coweeta.CSV and write an R script to do the following:
 - a) Count the number of observations per species.
 - b) Take a subset of the data including only those species with at least 10 observations.
 - c) Make a scatter plot of biomass versus height, with the symbol color varying by species, and use filled squares for the symbols. Also add a title to the plot, in italics.
 - d) Log-transform biomass, and redraw the plot.
4. The built-in data set mammals contain data on body weight versus brain weight. Write R commands to:
 - a) Find the Pearson and Spearman correlation coefficients. Are they similar?
 - b) Plot the data using the plot command.
 - c) Plot the logarithm (log) of each variable and see if that makes a difference.

B.Tech. (CS)

5. In the library MASS is a dataset UScereal which contains information about popular breakfast cereals. Attach the data set and use different kinds of plots to investigate the following relationships:
 - a) Relationship between manufacturer and shelf
 - b) Relationship between fat and vitamins
 - c) Relationship between fat and shelf
 - d) Relationship between carbohydrates and sugars
 - e) Relationship between fiber and manufacturer
 - f) Relationship between sodium and sugars

6. Write R script to: a) Do two simulations of a binomial number with $n = 100$ and $p = .5$. Do you get the same results each time? What is different? What is similar? b) Do a simulation of the normal two times. Once with $n = 10$, $\mu = 10$ and $\sigma = 10$, the other with $n = 10$, $\mu = 100$ and $\sigma = 100$. How are they different? How are they similar? Are both approximately normal?

7. Create a database medicines that contains the details about medicines such as {manufacturer, composition, price}. Create an interactive application using which the user can find an alternative to a given medicine with the same composition.

8. Create a database songs that contains the fields {song_name, mood, online_link_play_song}. Create an application where the mood of the user is given as input and the list of songs corresponding to that mood appears as the output. The user can listen to any song form the list via the online link given.

9. Create a package in R to perform certain basic statistics functions.

Mini project using data set of your choice from Open Data Portal (<https://data.gov.in/>) for the following exercises

B.Tech. (CS)

Course Outcomes:

CO1:	Develop an R script and execute it
CO2:	Install, load and deploy the required packages, and build new packages for sharing and reusability
CO3:	Extract data from different sources using API and use it for data analysis
CO4:	Visualize and summarize the data
CO5:	Design application with database connectivity for data analysis

BTCSPCC 803C: Deep Learning Lab

Course Objectives:

- To learn how to create and manipulate tensors using Tensorflow tool.
- To get to know Applied Deep Learning with PyTorch.
- To create and manipulate applications for artificial intelligence in the Scala programming language.
- To learn Character-Level RNN.

List of Exercises

1. Introduction to TensorFlow.
2. Learning about Features and Outliers.
3. Working with Training Sets and Test Sets.
4. Scala program to demonstrate example of collection list and for loop.
5. Appending and merging Lists using scala.
6. Scala List class and pattern matching
7. L2 Regularization and Correlated Features.
8. Classifying Names with a Character-Level RNN
9. Generating Shakespeare with a Character-Level RNN

B.Tech. (CS)

Course Outcomes:

At the end of this course, the students will be able to

CO1:	Create and manipulate tensors using Tensor flow tool and to understand tensor flow concepts.
CO2:	Know supervised learning and working with features and labels.
CO3:	Acquire knowledge on CNN, RNN.
CO4:	To create and manipulate applications for artificial intelligence in the Scala programming language.
CO5:	To learn Character-Level RNN.

Course Delivery methods

CD1	Lecture by use of boards/LCD projectors/OHP projectors

BTCSPCC 804: Software Testing and Validation Lab

Course Objectives

- To study fundamental concepts in software testing, including software testing objectives, process, criteria, strategies, and methods.
- To discuss various software testing issues and solutions in software Unit test; integration, regression, and system testing.
- To learn how to planning a test project, design test cases and data, conduct testing operations, manage software problems and defects, generate a testing report.
- To expose the advanced software testing topics, such as object-oriented software testing methods, and component-based software testing issues, challenges, and solutions.
- To gain software testing experience by applying software testing knowledge and methods to practice-oriented software testing projects.

Lab Experiments

1. a) Write a program that calculates the area and perimeter of the circle. And find the Coverage & Test Cases of that program using JaButi Tool.
b) Write a program which read the first name and last name from console and matching with expected result by using JaBuTi.
c) Write a program that takes three double numbers from the java console representing , respectively, the three coefficients a,b, and c of a quadratic equation.
d) Write a program that reads commercial website URL from a url from file .you should expect that the URL starts with www and ends with .com. retrieve the name of the site and output it. For instance, if the user inputs www.yahoo.com, you should output yahoo. After that find the test cases and coverage using JaButi.
e) Write a program for a calculator and find the test case and coverage and Def-use-graph.
f) Write a program that reads two words representing passwords from the java console and outputs the number of character in the smaller of the two. For example, if the words are open and sesame, then the output should be 4, the length of the shorter word, open. And test this program using JaButi
2. Analyze the performance of following website using JMeter.

Site	Website	Type
Amazon	Amazon.com	shopping
Flip kart	Flipkart.com	shopping
Railway reservation	Irctc.co.in	Ticket booking site
Train searching	Erail.in	Train searching

B.Tech. (CS)

3. Calculate the mutation score of programs given in 1(a) to 1 (f) using jumble Tool.
4. Calculate the coverage analysis of programs given in 1 (a) to 1 (f) using EclEmma Free open source Tool.
5. Generate Test sequences and validate using Selenium tool for given websites below:

Site	Website	Type
Amazon	Amazon.com	shopping
Flip kart	Flipkart.com	shopping
Railway reservation	Irctc.co.in	Ticket booking site
Train searching	Erail.in	Train searching

B.Tech. (CS)

Course Outcomes:

At the end of the course, the student will be able to:

CO1:	Apply software testing knowledge and engineering methods.
CO2:	Design and conduct a software test process for a software testing project.
CO3:	Identify the needs of software test automation, and define and develop a test tool to support test automation.
CO4:	Understand and identify various software testing problems, and solve these problems by designing and selecting software test models, criteria, strategies, and methods.
CO5:	Understand various communication methods and skills to communicate with their teammates to conduct their practice-oriented software testing projects.

Course Delivery methods

CD1	Lecture by use of boards/LCD projectors/OHP projectors
CD2	Tutorials/Assignments
CD3	Seminars
CD4	Self- learning advice using internets
CD5	Industrial visit

BTCSPSIT 805: PROJECT**Course Objective:**

- To introduce the concept and methods required for the construction of large software intensive system.
- To develop a broad understanding of the discipline of software engineering and management of software system.
- To provide an understanding of both theoretical and methodological issues involve in modern software engineering project management and focus strongly on practical techniques

Course Outcomes:

At the end of the course, the student will be able to:

CO1:	Capability to acquire and apply fundamental principles of engineering.
CO2:	Be a multi-skilled engineer with good technical knowledge, management, leadership and entrepreneurship skills.
CO3:	Identify, formulate and model problems and find engineering solution based on a systems approach.
CO4:	Capability and enthusiasm for self-improvement through continuous professional development and life-long learning.
CO5:	Evaluate practical techniques in Projects.

Table: Mapping of Course Outcomes with Program Outcomes

Course Outcome	Bloom Level	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12	PSO1	PSO2

B.Tech. (CS)

BTCSSODECA 806: Social Outreach, Discipline & Extra Curricular Activities

Course Objective:

- To allowing students to explore strengths and talents outside of academics.
- To helping students develop stronger time-management and organizational skills.
- To giving students the opportunity to build friendships and participate in group activities outside of the tight circle of the regular classroom.
- To helping to build confidence and self-esteem.

Course Outcomes:

At the end of the course, the student will be able to:

CO1:	Develop their self-confidence, leadership qualities, and their responsibilities towards the community.
CO2:	Have an impact on academic development, personal development, and civic responsibility
CO3:	Understand the value of Social Work.
CO4:	Understand the Significance of Discipline in student's Life
CO5:	Contribute towards in social up-gradation by social organization like, Art of Living, Yoga etc., Blood donation, Awareness programs, personality development programs.

Table : Mapping of Course Outcomes with Program Outcomes

Course Outcome	Bloom Level	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12	PSO1	PSO2

BTBSC 807: ANANDAM

Objectives:

- To instil the joy of giving in young people, turning them into responsible citizens to build up a better society.
- To inculcate the habit of service in students across the University.
- A compulsory course of 2 credits per semester to be included in each program of University.
- Students to be expected to engage in individual and group acts of service and goodness.

Action Plan:

Students will be expected to

- Do at least one act of individual service each day
- Record this act of service in a dedicated Register / Personal Diary
- Share this Register / Personal Diary day in the Anandam Class scheduled per week. The class interaction will include Personal Diary check, Showing of CommUnity based motivation videos, CommUnity based presentations by students, Role playing etc.
- Undertake one group service project for 64 hours every semester (outside college hours)
- Upload the report on the group project on the Anandam platform
- Participate in a sharing and presentation on the group service in the discussion sessions held once in week
- There will be some suggested projects and organizations that students can work with. Students can also suggest their own projects which others can join

Each student will finish the year with a portfolio of giving. This will include their Register / Personal Diaries and their reports on group service projects.

11. TEACHING-LEARNING PROCESS/ METHODOLOGY (TLM):

The teaching-learning process should be aimed at systematic exposition of basic concepts so as to acquire knowledge of technical program in a canonical manner. In this context, applications of technical program and linkage with the theory constitute a vital aspect of the teaching-learning process. The course offers many modes of learning and assessment methods. Students have great freedom of choice of course which they can study. The various components of teaching learning process are summarized in the following heads.

1. **Class room Lectures:** The most common method of imparting knowledge is through lectures. There are diverse modes of delivering lectures such as through blackboard, power point presentation and other technology aided means. A judicious mix of these means is a key aspect of teaching-learning process.
2. **Tutorials:** To reinforce learning, to monitor progress, and to provide a regular pattern of study, tutorials are essential requirements. During these tutorials, difficulties faced by the students in understanding the lectures, are dealt with. Tutorials are also aimed at solving problems associated with the concepts discussed during the lectures.
3. **Practical:** To provide scientific visualization and obtaining results of Technical program in practical sessions. These sessions provide vital insights into scientific concepts and draw learner's attention towards limitations of scientific computations. During practical, scientific models arising in real life problems can also be simulated.
4. **Choice based learning/Open elective:** LOCF in this undergraduate program provides great flexibility both in terms of variety of courses and range of references in each course.
5. **Field based learning:** Students may enhance their knowledge through field based learning while understanding the practical importance.
6. **Textbooks learning:** A large number of books are included in the list of references of each course for enrichment and enhancement of knowledge.
7. **E-learning:** Learner may also access electronic resources and educational websites for better understanding and updating the concepts.
8. **Self-study materials:** Self-study material provided by the teachers is an integral part of learning. It helps in bridging the gaps in the classroom teaching. It also provides scope for teachers to give additional information beyond classroom learning.
9. **Assignment/Problem solving:** Assignments at regular intervals involving applications of theory are necessary to assimilate basic concepts of courses. Hence, it is incumbent on the part of a learner to complete open-ended projects assigned by the teacher.
10. **Internships:** The teaching-learning process needs to be further supported by other activities devoted to subject-specific and interdisciplinary skills, summer and winter internships. During these internships it is expected that a learner will interact with experts and write a report on a topic provided to the learner.

11. **Institute visits:** Institute visit by a learner is also a part of learning process. During such visits a learner has access to knowledge by attending academic activities such as seminars, colloquia, library consultation and discussion with faculty members. These activities provide guidance and direction for further study.
12. **Industrial visits:** Industrial visits offer an opportunity to observe applications of scientific concepts. These visits also give an opportunity to realize the power of mathematical ideas and their translation in problem solving.
13. **Training programs:** Training programs organized by various agencies/institutes provide an opportunity to learn various dimensions of courses.

12. ASSESSMENT AND OUTCOME MESUAREMENT METHODS (AOMM):

A range of assessment methods which are appropriate to test the understanding of various concepts of courses will be used. Various learning outcomes will be assessed using time-bound examinations, problem solving, assignments and viva-voce examination. For various courses in this program, the following assessment methods shall be adopted:

- i. Scheduled/unscheduled tests
- ii. Problem solving sessions aligned with classroom lectures
- iii. Practical assignments
- iv. Regular chamber consultation with faculty members
- v. Class Tests and semester end comprehensive examination

Examination and Evaluation:

- I. The medium of instructions and examination shall be Bilingual.
- II. Candidates shall be examined according to the scheme of examination and syllabus as approved by the BOS and Academic Council from time to time.
- III. To pass each semester examination, a candidate must obtain at least 40% marks in each written paper, practical work semester examination.
- IV. Each theory paper for the respective semester examination shall be set and evaluation of the answer books shall be done as per the University rules.
- V. The assessment of External Evaluation i.e. End Term Semester Examination will be made out of 70 (Seventy) marks in theory Papers and Internal Evaluation of 30 (Thirty) marks.

Criterion for awarding Grading System:

Criterion for Awarding SGPA and CGPA: The criterion for awarding the Semester GradePoint Average (SGPA) and Cumulative Grade Point Average (CGPA) for B.Tech. Program shall be as follows:

- a) The criterion for passing in a subject is that a student should secure minimum 40% marks in individual paper.

B.Tech. (CS)

- b) A student obtaining less than pass marks as specified above, in each subject (sum of internal and End-Term examinations) he will be declared fail in that subject and will have to re-appear in a End-Term examination of the course in subsequent odd / even semester end term examination, subject to maximum permissible period of n+4 semesters to complete the course.
- c) The University has adopted Absolute Grading System for converting marks into grades. The formula of 10- point grading system for conversion of marks obtained into Letter Grades and converting Letter Grades to Grade Point is given below:

Table: Marks, Letter Grades and Grade Points

Marks	Letter Grade	Grade Points
91-100	O (Outstanding)	10
81-90	A+(Excellent)	9
71-80	A(Very Good)	8
61-70	B+(Good)	7
51-60	B(Above Average)	6
46-50	C(Average)	5
40-45	P (Pass)*	4
0-39	F(Fail)	0
-	AB (Absent)	0

***Pass Mark: 40% in individual paper**

- d) While converting the marks into Letter Grade, the rounding off marks must be considered.
- e) A student obtaining Grade F shall be considered failed and will be required to reappear in the examination.
- f) For noncredit courses "Satisfactory" or Unsatisfactory" shall be indicated instead of the letter grade and this will not be counted for the computation of SGPA/CGPA.

Computation of SGPA and CGPA:

The university has adopted UGC recommended procedure for computation of Semester Grade Point Average (SGPA) and Cumulative Grade Point Average (CGPA)

- a) The SGPA is the ratio of sum of the product of the number of credits with the grade points scored by a student in all the papers/ courses taken by a student and the sum of the number of credits of all the courses undergone by a student, i.e.

$$\text{SGPA (Si)} = \frac{\sum (C_i \times G_i)}{\sum C_i}$$

B.Tech. (CS)

Where C_i is the number of credits of the i^{th} course and G_i is the grade point scored by the student in the i^{th} course. The university shall issue Semester Grade Card to the student.

- b) The CGPA is also calculated in the same manner taking into account all the courses undergone by a student over all the semesters of a program, i.e.

$$\text{GPA} = \frac{\sum (C_i \times S_i)}{\sum C_i}$$

Where S_i is the SGPA of the i^{th} semester and C_i is the total number of credits in that semester.

- c) The SGPA and CGPA shall be rounded off to 2 decimal points and reported in the transcripts.

Illustration of Computation of SGPA and CGPA and Format for Transcripts:

- a) Computation of SGPA and CGPA

Illustration for SGPA

Course	Credit	Grade Letter	Grade Point	Credit Point (Credit x Grade)
Course/Paper 1	3	A	8	3x8=24
Course/Paper 2	4	B+	7	4x7=28
Course/Paper 3	3	B	6	3x6=18
Course/Paper 4	3	O	10	3x10=30
Course/Paper 5	3	C	5	3x5=15
Course/Paper 6	4	B	6	4x6=24
	20			139

Thus, $\text{SGPA} = 139/20 = 6.95$

- b) Illustration for CGPA

Semester-1	Semester-2	Semester-3	Semester-4	Semester-5	Semester-6	Semester-7	Semester-8
Credit: 20	Credit: 22	Credit: 25	Credit: 26	Credit: 26	Credit: 25	Credit: 24	Credit: 26
SGPA:6.9	SGPA:7.8	SGPA:5.6	SGPA:6.0	SGPA:6.3	SGPA:8.0	SGPA:8.0	SGPA:8.0

Thus, $\text{CGPA} = \frac{20 \times 6.9 + 22 \times 7.8 + 25 \times 5.6 + 26 \times 6.0 + 26 \times 6.3 + 25 \times 8.0 + 24 \times 8.0 + 26 \times 8.0}{20 + 22 + 25 + 26 + 26 + 25 + 24 + 26} = 7.06$

13. TEACHERS TRAINING (TT):

Learning Outcomes Based Curriculum Framework (LOCF) Quality initiative of UGC based on Outcome Based Education (OBE) is being implemented by the University Grants Commission to enhance the Quality of Higher Education and that of Higher Education Learners and Teachers. Therefore, university arrange following activities for teachers training:

1. Workshops for LOCF implementation.
2. Seminar for LOCF implementation.
3. FDP on LOCF.
4. Outcome based higher education and understanding the learning objectives, learning outcomes, new approaches in the area of outcome measurement, preparing future ready teachers and students.
5. Developing a battery of quality speakers/educators to become resource persons to play role for Training of Trainers (TO

14. KEY WORDS:

LOCF, CBCS, Course Learning Outcomes, Employability, Graduate Attributes Communication Skills, Critical Thinking, and Descriptors.
